Plainsboro, NJ | +1 (571) 585-5345 | dhananjay.n@myjobsmails.com | [LinkedIn](#)

SUMMARY

- **Data Engineer with 5+ years of experience** building and managing data pipelines for financial services and enterprise analytics, with a focus on data quality, governance, and platform reliability.
- Designs and implements **scalable data ingestion and transformation systems** on AWS, utilizing Python, PySpark, and Databricks to process position, trade, and transactional data for compliance and reporting.
- Engineers orchestrated workflows with **Airflow** and optimizes data lakes with **Delta Lake** and **Glue** Catalog, directly improving data availability, query performance, and auditability for critical finance and trading platforms.
- **Develops and automates the full data pipeline lifecycle**, from on-premise ETL with Hive and Flink to modern cloud deployments, incorporating CI/CD and containerization to ensure consistent, stable production releases.
- **Works directly with compliance, risk, and business teams** to define requirements, resolve data gaps, and deliver trusted datasets that enhance the accuracy of surveillance reports, dashboards, and operational decision-making.

EXPERIENCE

Morgan Stanley | Data Engineer

Aug 2024 - Current

- Ingested raw position, trade, and reference datasets into **AWS S3** through controlled batch and micro-batch loads, applying **Python** and **SQL** routines to stabilize upstream data flow for analytics teams.
- Built transformation jobs in **PySpark** on **Databricks** to standardize formats, resolve schema drift, and apply quality checks that improved usability of daily feeds consumed by compliance and reporting groups.
- Configured **Airflow** workflows to orchestrate multi-step validations, enrichment tasks, and table refresh cycles, ensuring reliable availability of curated datasets across finance and trading platforms.
- Optimized storage and access patterns with **Delta Lake** and **Glue Catalog**, improving query consistency and supporting lineage needs for regulatory and audit-focused workloads.
- Implemented controlled access models in **Snowflake** and **AWS IAM**, aligning table structures, roles, and permissions with internal governance and data distribution requirements.
- Partnered with compliance and risk teams to review upstream data gaps, redefine validation rules, and implement reconciliation checks that improved traceability in surveillance datasets.

Adons Softech | Data Engineer

Jul 2018 - Nov 2022

- Extracted raw transactional and event data from on-prem sources and built ETL workflows in **Hive** that processed daily inbound files, improving consistency of data availability for internal analytics teams.
- Designed cleansing logic to standardize formats, remove duplicates, and correct corrupted entries, reducing recurring data-quality issues in curated layers and improving downstream report accuracy over multiple release cycles.
- Modeled warehouse structures to organize historical and incremental data across core business domains, enabling teams to query stable, versioned datasets that supported month-end reviews, operational reporting.
- Developed aggregation and time-window processing tasks with **Apache Flink**, producing consolidated metrics that reduced manual reconciliation effort for operations teams and improved clarity of trend analysis.
- Implemented CI/CD workflows using **GitLab CI** to automate packaging and deployment of pipeline components, decreasing release turnaround time and ensuring consistent promotion of tested artifacts into production.
- Containerized data-processing routines with **Docker** and managed deployments on **Kubernetes**, improving execution stability and allowing workloads to handle increased data volume without operational disruption.
- Prepared refined datasets for business stakeholders by aligning definitions, consolidating metrics, and integrating published layers with **Power BI**, enhancing the accuracy and adoption of dashboards used for recurring decision cycles.

TECHNICAL SKILLS

- **Programming & Scripting:** Python, SQL, Scala, Bash/Shell Scripting
- **Big Data & Cloud Platforms:** PySpark, Databricks, AWS, Azure, Snowflake, Delta Lake, Apache Hive, Apache Flink
- **Data Engineering Tools:** Apache Airflow, Informatica, Docker, Kubernetes, GitLab CI
- **Data Management & Governance:** Data Warehousing, ETL/ELT Design, Data Modeling, Data Lineage, Data Quality & Validation, Access Control (IAM, RBAC), Data Mining, Data Extraction, Data Cleaning, Data Manipulation
- **Visualization Tools & Methodologies:** Tableau, Power BI, Atlrexx, Advanced Excel, Jira, Agile/Scrum Methodology

Education

George Mason University, Fairfax, VA | Master of Science in Data Analytics Engineering
