

PRERIT SHIRISH MAHAJAN

Senior Data Engineer

+1 (571) 681-6238 preritma1@outlook.com <https://www.linkedin.com/in/prerit-m-25bb418/> Chicago, IL, USA

Summary

Senior Data Engineer with 10+ years of experience designing scalable data platforms and building high-performance ETL/ELT pipelines across AWS and Azure environments. Expertise in Python, SQL, Apache Spark, and modern data architectures, including data lakes, lakehouse platforms, and cloud data warehouses. Proven ability to process large-scale datasets, improve pipeline performance, and deliver reliable analytics systems that support data-driven decision making.

Experience

Oasys International

Senior Data Engineer 04/2021 - 01/2026

- Led development of scalable enterprise data pipelines supporting analytics and executive reporting.
- Built automated ELT pipelines using Python, SQL, and AWS Glue, processing approximately 2TB of data daily and reducing reporting latency by 60%.
- Designed data warehouse models used by Power BI and Tableau dashboards tracking operational KPIs.
- Implemented automated data quality checks and validation frameworks, improving data reliability by 40%.
- Developed optimized analytical datasets enabling faster BI query performance and improved reporting efficiency.

Judge Group

Data Analyst & Engineer 05/2017- 03/2021

- Architected high-throughput data pipelines supporting financial and trading analytics platforms.
- Designed AWS-based data lake architecture using S3, Glue, and Athena, processing millions of records daily.
- Developed Apache Spark and PySpark data processing workflows, improving large dataset processing performance by 50%.
- Migrated legacy on-premises ETL systems to scalable cloud-based data platforms.
- Implemented CI/CD pipelines and Infrastructure as Code using Terraform to automate data infrastructure deployment.

Nike

Data Engineer 09/2013 - 04/2017

- Increased data processing efficiency by 25% through developing Azure-based ETL pipelines with Azure Data Factory and Python.
- Improved reporting performance by 30% by designing optimized SQL queries and data models in Azure Synapse.
- Integrated Power BI dashboards with Azure data platforms, enabling near real-time analytics.
- Collaborated with engineering teams to build scalable data models used across multiple analytics teams.

Google

Google SQL Developer Intern 06/2012 - 08/2013

- Supported cloud-based analytics initiatives leveraging AWS data services for financial reporting
- Created SQL queries and analytical datasets from cloud-hosted relational databases
- Assisted in building dashboards for risk, compliance, and customer analytics
- Gained hands-on experience with cloud security, data privacy, and regulated data environments

Projects

Key Projects

Short summary of your work

-

Real-Time Customer Analytics Platform (Kafka + Spark + Snowflake)

Built a real-time analytics pipeline using Kafka and Spark Structured Streaming, processing 5M+ events/day and loading curated datasets into Snowflake for near real-time customer insights.

Enterprise Lakehouse Platform (Databricks + Delta Lake)

Developed a Databricks Lakehouse architecture using Delta Lake and Medallion (Bronze/Silver/Gold) layers, improving analytics query performance by 70%.

Enterprise Data Integration Platform (Airflow + AWS + Terraform)

Designed scalable ETL pipelines orchestrated with Airflow, integrating 20+ data sources into a cloud data lake with automated infrastructure deployment using Terraform.

Education

University of Illinois

B.Engineering of Computer Science 2008 - 2012

Education

Harvard University

Master of Liberal Arts (ALM) 2004 - 2008
