

Douglas Letz

Email: douglaslz981@gmail.com
Phone: (971) 612 - 9860

Address: Denison, TX

Summary

- Accomplished professional with a decade of experience designing and delivering enterprise-scale data engineering solutions, including cloud-native data hubs, complex ETL/ELT pipelines, and high-performance Spark/Databricks workloads across Azure and multi-cloud environments
- Highly skilled in Databricks, Spark, Python, SQL, Azure IaaS, Delta Lake optimization, CI/CD automation with Git, and Airflow orchestration, building reliable batch and streaming pipelines
- Strong experience integrating and engineering datasets from ServiceNow, Workday, Salesforce, HubSpot, SQL Server and Snowflake, developing scalable models, implementing data quality frameworks, and enabling BI delivery through Power BI
- Excellent communicator with strong leadership qualities and a proven ability to collaborate in team environments.

Certifications

- Databricks Certified Data Engineer Associate
- Azure Fundamentals (AZ-900)
- Azure Data Engineer Associate (DP-203)

Skills

- **Databricks:** Delta Lake, Medallion Architecture, Administration, Delta Live Tables, Databricks Structured Streaming
- **Cloud Platforms & Services:** Azure Data Factory, Azure Databricks, Azure SQL Database, Azure Synapse Analytics, Azure DevOps, Event Hubs
- **Programming & Scripting:** Python, SQL, PySpark, Scala
- **ETL & Data Engineering:** ETL Pipelines, Data Mesh Architecture, Airflow, Data Quality Frameworks, REST API Integration, Real-Time Streaming, Power BI
- **Security & Governance:** Unity Catalog, Fine-Grained Access Control, SOX Compliance
- **DevOps & Automation:** CI/CD Pipeline

Work Experience

Capgemini

Senior Software Engineer

Irving, TX

Jul 2023 - Present

- Designs and maintains large-scale ETL/ELT pipelines in Databricks (PySpark/Scala) processing 5TB+ daily, enforcing Delta Lake standards and Unity Catalog governance
- Builds and optimizes Spark workloads for batch and streaming, delivering sub-second transaction processing for 1M+ daily retail events via Event Hubs + Structured Streaming

- Architects cloud data solutions in Azure (and supporting AWS/GCP patterns), optimizing clusters and Photon execution to cut computing costs by 40% while improving workload stability.
- Develops enterprise data quality and metadata frameworks integrated with CI/CD (Azure DevOps + Git), automating 100+ checks and sustaining 15-minute SLAs for critical datasets.
- Implements monitoring and observability using custom Python/Scala log collectors, Databricks REST APIs, and Splunk dashboards—reducing incident resolution time by 70% and meeting SOX compliance.

Meta

Data Engineer

New York, NY

Jan 2018 - Jun 2023

- Engineered a metadata-driven Databricks ingestion framework (PySpark/Spark SQL) that cut infrastructure spend by 90% and reduced developer effort by 70%
- Built and supported 100+ production Spark pipelines and Delta Lake workloads with complete operational metrics, real-time alerting, and end-to-end observability
- Delivered Terraform-based provisioning for Synapse, Key Vault, and secure access controls, reducing manual setup effort by 60% and standardizing cloud deployments
- Developed enterprise integrations across Dynamics 365, Event Hubs streaming, and SAP sources, enabling consistent ingestion patterns and expanding domain coverage across 25+ systems
- Led a team of 5 Databricks developers across 45+ sprints, delivering zero-defect production releases while optimizing SQL/Synapse performance and reducing Azure costs by \$50K/month.

MEV

Data Analyst

New York, NY

Apr 2016 - Dec 2017

- Built SQL-driven data models, ETL processes, and reporting pipelines supporting enterprise analytics while improving BI query performance by 25%
- Developed early-stage Spark/Databricks transformations and data quality scripts, laying the foundation for scalable ingestion and standardization frameworks later adopted org-wide
- Automated financial and operational reporting workflows, cutting manual processing time by 40% and improving data accuracy across multiple business units
- Supported analytics teams with data validation, model preparation, and ad-hoc investigations, strengthening data reliability for downstream dashboards and decision-making
- Partnered with engineering to migrate legacy processes to modern cloud data platforms, improving lineage, governance, and maintainability.

Education

Boston University

Bachelor's Degree, Computer Science

Boston, MA

Sep 2009 - Apr 2013
