SUMMARY

Data Engineer with 4+ years of experience building and scaling reliable data platforms that support analytics, reporting, and data-driven decision-making. Proven track record of developing end-to-end data pipelines across AWS and Azure, handling large-scale structured datasets with a focus on performance, reliability, and cost efficiency. Hands-on experience designing batch and near-real-time ETL workflows using PySpark and managed orchestration tools, optimizing data processing to meet SLAs and support downstream BI and analytics use cases. Strong background in cloud data warehousing, data modeling, and SQL performance tuning to enable fast, consistent access to business-critical data. Comfortable partnering with analytics, product, and business teams to translate data requirements into scalable engineering solutions. Experienced in enabling self-service analytics through well-modeled datasets and dashboards using Power BI and Tableau, while leveraging Python and SQL automation to improve data quality and operational efficiency.

SKILLS

Data Engineering & Big Data: Apache Spark (PySpark, Scala), Hadoop Ecosystem (HDFS, Hive, HBase), Apache Kafka, Apache Airflow, Snowflake, Databricks, Delta Lake, AWS EMR, AWS Glue, Azure HDInsight
Cloud Platforms: AWS (S3, Redshift, EMR, Glue, Lambda, IAM, EC2, Athena), Azure (Data Lake Storage, Synapse Analytics, Data Factory, Databricks)
Programming & Query Languages: Python, SQL, Scala, Bash, Shell Scripting
Data Warehousing & ETL: SSIS, Informatica, Azure Data Factory, dbt (Data Build Tool)
Databases: Redshift, Azure SQL Data Warehouse,

PostgreSQL, MySQL, Microsoft SQL Server, MongoDB
Infrastructure & DevOps: Docker, Kubernetes, Terraform, Jenkins, Git, CI/CD Pipelines, Linux Administration
Data Visualization & Reporting: Power BI, Tableau
Python Libraries & Tools: NumPy, Pandas, PySpark, Matplotlib, SciPy, Seaborn
Other Tools & Skills: Data Modeling (Kimball, Inmon), Data Quality Management, Data Governance, Documentation (Jira, Confluence), Monitoring & Observability (Datadog), Strong Communication, Problem Solving, Cross-functional Collaboration
Operating Systems: Windows, Linux, macOS

EDUCATION

Master of Engineering in Computer Engineering

University of New Mexico

May 2025

Albuquerque, New Mexico

B. Tech in Electronics and Communication Engineering

SASTRA Deemed University

May 2021

Thanjavur, Tamilnadu

EXPERIENCE

Freddie Mac

Data Engineer

USA

Jan 2025 - Present

- Engineered and supported large-scale batch data pipelines using PySpark on AWS Glue, processing multi-terabyte financial datasets daily with a focus on reliability, performance optimization, and data quality for enterprise analytics use cases.
- Designed and administered cloud-based data warehouse solutions on Snowflake and Amazon Redshift, applying optimized data models and storage strategies that improved analytical query performance by 40% for risk and reporting workloads.
- Implemented enterprise-grade workflow orchestration using Apache Airflow, supporting dozens of interdependent pipelines with built-in alerting and recovery logic to ensure consistent delivery of critical datasets across business units.
- Led data modernization initiatives by migrating 100+ legacy Hadoop/Hive tables to AWS and Azure cloud platforms, improving data accessibility and enabling standardized reporting for analytics and business teams.
- Developed automated data validation, reconciliation, and anomaly detection frameworks using Python and SQL, identifying thousands of data discrepancies monthly and strengthening data integrity for financial and regulatory reporting.
- Delivered Power BI dashboards to monitor pipeline health, data freshness, and transaction trends, providing near real-time visibility to engineering and leadership teams and supporting operational decision-making.

Metasystems

Data Engineer

India

Jul 2020 - Jul 2023

- Performed advanced data analysis and transformation using SQL, Python, and Excel to support supply chain and operations reporting, contributing to 20% improvement in process efficiency and faster business decision cycles.
- Designed and delivered end-to-end BI solutions using Power BI, Amazon Redshift, and PostgreSQL, building dashboards used by senior leadership and multiple business teams for real-time performance monitoring.
- Built and automated recurring reporting workflows using Python-based scripting and SQL queries, reducing manual reporting effort by 30% while improving data consistency across departments.
- Administered and tuned relational and cloud databases including Redshift, PostgreSQL, and MySQL, optimizing schemas and queries to support high-volume analytical workloads with reliable performance.
- Established data quality, validation, and governance controls across reporting datasets, achieving 100% adherence to internal data standards and improving stakeholder confidence in analytics outputs.
- Partnered with product, operations, and leadership stakeholders to define KPIs and standardize metrics, translating complex datasets into actionable visual insights that supported both operational execution and strategic planning.
