PROFESSIONAL SUMMARY

Data Engineer with 6+ years of experience building and implementing modern cloud data platforms with deep expertise in Snowflake, dbt (Cloud and Core), and Python for enterprise data warehouse development. Proven practitioner of data vault 2.0 modeling patterns and Kimball dimensional modeling methodology, designing scalable, audit-friendly data platforms that support business agility and data governance. Experienced delivering end-to-end dbt projects including staging, cleaning, transformation, testing, and modeling layers with automated data quality testing frameworks and custom Python validations. Strong background in ETL/ELT pipeline development, external system integration via CDC and APIs (CRM, ERP, third-party platforms), and cloud migration from legacy SSIS and MSSQL Server environments to Snowflake. Proficient with AWS (S3, Lambda, IAM, CloudFormation) and Apache Airflow for pipeline orchestration and DataOps implementation. Collaborative Agile team player who works effectively with cross-functional business and technical stakeholders to deliver cloud-first data solutions with a strong commitment to data quality and best practices.

TECHNICAL SKILLS

- **Snowflake & Cloud Data Platform:** Snowflake, Snowflake dbt integration, cloud data platform implementation and migration
- **dbt:** dbt Cloud and dbt Core
- **Data Modeling:** Data Vault 2.0 (hubs, links, satellites, bridge and PIT tables, business vault), Kimball dimensional modeling (star schema, snowflake schema, slowly changing dimensions, data marts), data warehouse design, enterprise data platform architecture
- **SQL & Legacy ETL:** SQL, T-SQL, MSSQL Server, SSIS, Azure SQL, PostgreSQL, Oracle
- **Python & Programming:** Python, Bash/Shell scripting, Scala, R
- **AWS Cloud Services:** AWS, cloud data pipeline development and infrastructure management
- **Data Integration & CDC:** REST API integration, change data capture (CDC), file-based integrations, CRM and ERP data ingestion (Salesforce, SAP, NetSuite), third-party platform integration, Fivetran, Apache Kafka, Azure Event Hubs
- **DataOps & CI/CD:** DataOps best practices, dbt CI/CD pipelines, GitHub Actions, Azure DevOps, Git, Jenkins, Terraform, automated deployment, testing and monitoring across the data pipeline lifecycle, Agile/Scrum
- **Orchestration & Pipeline Tools:** Apache Airflow (DAG design, scheduling, dependency management), Prefect, dbt Cloud scheduled jobs, AWS Step Functions
- **Data Quality & Governance:** dbt tests (schema, custom, generic), custom Python validation frameworks, automated monitoring, data quality frameworks, data governance standards, lineage documentation, access controls, compliance requirements
- **BI & Analytics:** Power BI (DAX, semantic modeling), Tableau, Sigma, ThoughtSpot, Matplotlib, Seaborn, analytics-ready dataset preparation, data mart delivery for BI consumption

PROFESSIONAL EXPERIENCE

Senior Data Engineer | CVS Health | Charlotte, NC

Jun 2023 – Present

- Collaborated on the design and implementation of data vault 2.0 modeling patterns on Snowflake, building hubs, links, satellites, and business vault structures that established a scalable, audit-friendly enterprise data platform supporting business agility and governance requirements across multiple lines of business.
- Built and maintained automated dbt (Cloud and Core) pipelines for data staging, cleaning, transformation, testing, and modeling, developing comprehensive dbt test suites and custom Python validation frameworks that enforced data quality and reliability standards across all ingestion and curated layers.
- Designed and implemented Kimball dimensional data marts using star schema and slowly changing dimension patterns, delivering business-ready datasets to Power BI and Tableau reporting environments and supporting analytics and BI requirements for cross-functional business stakeholders.

- Developed ETL/ELT transformation models using dbt, Python, and SQL to build scalable ingestion and processing pipelines on Snowflake, integrating external data from CRM, ERP, and third-party platforms via REST APIs, change data capture, and Snowpipe-based streaming ingestion.
- Supported cloud migration planning and implementation, designing data migration strategies from legacy SSIS and MSSQL Server environments to the modern Snowflake cloud platform, including T-SQL stored procedure migration, SSIS package re-engineering, and validation of migrated data against source systems.
- Implemented DataOps best practices including CI/CD pipelines for dbt model deployment using GitHub Actions, automated data quality testing, and pipeline monitoring solutions that ensured reliable, scalable, and continuously integrated data workflows across the pipeline lifecycle.
- Leveraged AWS services (S3, Lambda, IAM, CloudFormation, Glue) for cloud-based data ingestion, orchestrated workflows with Apache Airflow, and enforced data governance, security, and compliance standards across Snowflake environments with role-based access controls and dynamic data masking.
- Collaborated with line of business leaders and technical stakeholders in Agile/Scrum ceremonies to gather requirements, design solutions, and deliver cloud-first data platform capabilities, communicating technical concepts clearly to both business and technical audiences.

Data Engineer | Origin IT Solutions | Hyderabad, India

Oct 2020 – Dec 2022

- Built and maintained dbt Core transformation pipelines on Snowflake and Amazon Redshift, implementing staging, intermediate, and mart model layers with dbt schema tests, custom generic tests, and snapshot models for slowly changing dimension tracking across enterprise data warehouse workloads.
- Applied data vault 2.0 and Kimball dimensional modeling techniques to design scalable data warehouse schemas, developing hub, link, and satellite structures alongside star schema data marts optimized for BI tool consumption and self-service analytics.
- Developed Python-based ETL/ELT pipelines and custom data validation frameworks for ingesting and transforming data from CRM, ERP, and third-party REST API sources, implementing CDC patterns and file-based integrations to support near-real-time and batch data delivery into Snowflake.
- Supported cloud migration of legacy SSIS workflows and MSSQL Server stored procedures to modern cloud ETL pipelines, refactoring T-SQL transformation logic into dbt models and Python processing scripts optimized for distributed cloud execution.
- Implemented DataOps practices using Git, GitHub, and Jenkins for CI/CD pipeline automation, establishing automated dbt test execution on pull requests, deployment workflows across development and production environments, and pipeline monitoring dashboards that reduced data incidents by 35%.
- Collaborated with analytics, BI, and business stakeholder teams in Agile sprints to deliver data engineering solutions, documenting data models, transformation logic, and pipeline architecture to support cross-team knowledge sharing and long-term platform maintainability.

Data Analyst | Pike Solutions | Hyderabad, India

May 2019 – Oct 2020

- Built SQL and Python data processing pipelines for extraction, transformation, and loading across MSSQL Server and PostgreSQL databases, writing complex T-SQL stored procedures, views, and queries optimized for performance and producing clean, analytics-ready datasets for BI consumption.
- Developed Power BI and Tableau dashboards and semantic models for enterprise reporting, applying dimensional modeling concepts and visualization best practices to translate business requirements into structured, reliable analytics solutions.
- Implemented data quality checks and validation procedures across incoming data sources, identifying and resolving data inconsistencies before they reached reporting layers and establishing early DataOps practices for pipeline reliability.
- Automated data workflows using Python scripting and REST API integrations, reducing manual data handling and enabling faster, more reliable data delivery across analytics and business stakeholder teams.
- Collaborated with business and technical stakeholders in an Agile environment to gather requirements, document data flows, and communicate findings clearly, developing strong cross-functional problem-solving and communication skills.

EDUCATION

-
- Master of Science, Business Analytics — Governors State University, Chicago, IL | GPA: 3.6 | Jan 2023 – May 2024
