

Spoorthy Kairamkonda

Data Analyst

✉ spoorthyk1203@gmail.com ☎ +15702918550 📍 Pennsylvania, USA

Summary

Result-oriented Data Engineer with over 4 years of experience focusing on the Microsoft Azure ecosystem and enterprise data solutions. Proficient in designing and implementing scalable data pipelines using Azure Data Factory, Azure Databricks, and Spark. Skilled in building robust Extract, Transform, Load (ETL) processes to integrate disparate data sources into Azure Data Lake Storage (ADLS) and Synapse Analytics. Expert in advanced SQL for complex querying and dimensional modeling, including the development of star schemas for optimized reporting. Experienced in ingesting data from RESTful API sources using OAuth 2.0 authentication and normalizing complex JSON structures into relational formats. Demonstrated ability to collaborate with cross-functional teams, including Business Intelligence (BI) developers and cloud administrators, to deliver comprehensive data strategies. Technical expertise includes Snowflake, AWS Redshift, and big data technologies like Hadoop and Hive for large-scale data processing. Committed to maintaining high data quality and security standards through the application of modern data lakehouse principles. Proficient in version control using Git and automating workflows with Continuous Integration/Continuous Delivery (CI/CD) tools like Jenkins and GitLab. Eager to contribute technical excellence to the JourneyTeam Data Engineering practice while aligning with business objectives and industry best practices.

Technical Skills

Azure Cloud & Data Engineering:	Azure Data Factory (ADF), Azure Data Lake Storage (ADLS), Azure Databricks, Azure Synapse Analytics, Microsoft Fabric, Azure SQL Database
Programming & Query Languages:	SQL (Advanced), Python, R, JavaScript, Scala, Spark SQL, T-SQL, PL/SQL
Big Data & Distributed Computing:	Apache Spark, Hadoop, HDFS, Apache Hive, Apache Kafka, Databricks Delta Lake
ETL, Orchestration & Automation:	Azure Data Factory, Apache Airflow, Informatica, Alteryx, Talend, AWS Glue, Azure Logic Apps, Power Automate
Data Modeling & Databases:	Dimensional Modeling, Star Schema, Snowflake, Amazon Redshift, Google BigQuery, MySQL, PostgreSQL, Oracle, NoSQL (MongoDB)
API Integration & Web Services:	RESTful APIs, OAuth 2.0, JSON Normalization, Postman, Webhooks, Beautiful Soup, Selenium
Data Visualization & BI:	Power BI, Tableau, Looker, QlikView, Google Data Studio, DAX, Power Query
DevOps & Version Control:	Git, GitHub, GitLab, Jenkins, CI/CD Pipelines, Docker, Kubernetes, Azure DevOps
Advanced Analytics & Machine Learning:	Scikit-learn, TensorFlow, Predictive Modeling, Regression Analysis, Statistical Testing, Time-Series Forecasting
Collaboration & Methodologies:	Agile/Scrum, JIRA, Confluence, Microsoft Teams, Technical Documentation, Requirement Gathering

Work Experience

Senior Data Analyst | Highmark Health | July 2025 - Present

Pittsburgh, Pennsylvania, USA

- Developed advanced data integration solutions using SQL and Python to process large-scale healthcare datasets for strategic decision-making.
- Implemented enterprise-grade ETL pipelines using Azure Data Factory and Alteryx to consolidate clinical and financial systems data into centralized environments.
- Built and delivered intuitive dashboards in Power BI and Tableau to monitor key performance indicators such as care outcomes and financial efficiency.
- Optimized large-scale data processing workflows using Apache Spark and AWS S3 to ensure high data quality and regulatory compliance.
- Designed and optimized complex dimensional models and star schemas within Snowflake to improve analytical querying performance for business users.
- Integrated healthcare data from external API sources using OAuth 2.0 and transformed nested JSON structures into SQL-ready tables.
- Collaborated with cross-functional teams to automate recurring reports, significantly reducing manual processing time for business stakeholders.
- Enhanced data security protocols within cloud environments by implementing access controls and data encryption standards.
- Automated data ingestion and reporting workflows using Apache Airflow and Python to increase system reliability and data availability.

- Contributed to the adoption of DevOps practices by utilizing Git and Jenkins for version control and continuous integration of analytics solutions.

Data Analyst | Lincoln Financial Group | July 2024 - May 2025

Radnor, Pennsylvania, USA

- Performed complex data extraction and transformation using SQL Server and Oracle to analyze financial, actuarial, and operational datasets.
- Designed predictive analytics and machine learning models using Scikit-learn and Python to forecast financial risk and customer behavior patterns.
- Developed interactive enterprise reports in Tableau and Power BI to provide real-time visibility into business operations and compliance metrics.
- Built scalable data integration pipelines using AWS Glue and Talend to aggregate data from multiple policy administration systems.
- Optimized cloud-based data warehousing and big data solutions leveraging Amazon S3 and Snowflake for high-performance financial data access.
- Created detailed technical documentation and diagrams to support data architecture and engineering standards across the organization.
- Automated analytics workflows and deployments using CI/CD pipelines with Jenkins, Git, and Docker to ensure scalable and auditable solutions.
- Collaborated with business analysts to gather requirements and translate them into technical data engineering specifications.
- Improved data ingestion processes by implementing metadata-driven techniques for pipeline orchestration and automation.
- Supported the migration of legacy data systems to modern cloud infrastructures, ensuring data integrity and quality throughout the transition.

Data Analyst | Tata Communications | Jun 2020 - July 2023

Chennai, India

- Built and maintained scalable data pipelines using Apache Airflow, AWS Glue, and Apache NiFi to support real-time network analytics.
- Developed high-performance querying solutions using Apache Spark and Amazon Redshift to handle high-velocity and high-volume telecommunications data.
- Performed advanced data transformations using Python and SQL to drive network optimization, service reliability, and customer experience initiatives.
- Integrated streaming data from global telecommunications networks using Apache Kafka and RESTful API frameworks to ensure seamless synchronization.
- Delivered end-to-end analytics solutions by building executive dashboards with Looker and Power BI connected to Google BigQuery.
- Implemented containerized workloads using Docker and Kubernetes to ensure resilient and scalable data processing infrastructure.
- Streamlined data synchronization across distributed platforms by developing custom scripts and automation tools in Python.
- Collaborated with senior engineers to implement modern data lakehouse principles, combining data lakes and warehouses for robust data management.
- Optimized SQL queries and database indexes to improve the speed of reporting on customer usage patterns and network traffic metrics.
- Contributed to the development of standardized data templates and best practices for the global data engineering team to foster continuous learning.

EDUCATION

The University of Scranton | MBA in Business Analytics | Jan 2024 - May 2025

Pennsylvania, USA
