SUMMARY

Senior Data Engineer with 10+ years of experience designing and optimizing cloud-based data pipelines, data warehouses, and big data solutions. Skilled in **GCP**, **AWS**, and Azure for building scalable, high-performance systems. Strong expertise in **SQL**, **ETL** optimization, and big data tools such as **Apache Spark**, **Hadoop**, and **Snowflake**. Proficient in Python scripting for automation and workflow optimization. Experienced with BI tools (Tableau, **Power BI**, Looker Studio) to deliver actionable insights. Hands-on with **CRM** data extraction (Salesforce, Lead Squared, OMS) to improve reporting accuracy. Collaborative and process-driven, with proven success in improving efficiency, reducing costs, and ensuring data governance, integrity, and compliance.

SKILLS

- **Big Data Ecosystem** : Apache Spark, Hive, MapReduce, HDFS, Kafka, Apache NIFI, AWS Glue, AWS Athena, AWS EMR, Snowflake, Google BigQuery, DBT (Data Build Tool, SQL Databases (MS SQL, MySQL, PostgreSQL)
- **Cloud Environments**: Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP)
- **Databases**: MS SQL, MySQL, PostgreSQL, Mongo DB, Redshift, Snowflake
- **Programming Languages**: Python, SQL, Shell, Bash
- **Operating Systems**: Windows, LINUX, Ubuntu
- **BI Tools**: Tableau, Power BI, Looker studio, Apache Superset
- **Alerting & Logging**: AWS CloudWatch, Grafana, Kibana
- **Version control**: Git, GitHub, GitLab, Bitbucket
- **CRM Tools**: Salesforce, Lead Squared, OMS (Order Management System), Order Hive
- **DevOps Tools**: Docker Kubernetes, Jenkins, Gitlab, Terraform

EXPERIENCE

Senior Data Engineer | Oracle Health | July 2023 – Present

- Delivering customized data engineering solutions to meet specific client needs and business objectives, ensuring seamless integration and optimal performance of data systems.
- Designing, optimizing, and maintaining SQL-based data pipelines and models on the Google Cloud platform, including creating complex queries, stored procedures, and triggers.
- Ensuring data integrity and optimizing large datasets for advanced analysis using DBT (primarily SQL) while leveraging GCP Big Query for efficient data storage.
- Ensuring compliance with privacy regulations while managing data storage and processing on GCP Big Query.
- Proactively identifying and addressing performance bottlenecks within data pipelines, enhancing throughput, reliability, and scalability.
- Fine-tuning SQL queries and leveraging Big Query and DBT optimization techniques to improve data pipeline performance.
- Collaborating with data analysts and clients to understand stakeholder needs and translate them into actionable data pipelines.
- Optimizing cloud infrastructure through Python scripting to manage GCP virtual machines, improving performance and scalability to meet computational demands.
- Utilizing Fivetran, a cloud-based ETL tool, to push data to data warehouses such as Snowflake, Big Query, Redshift, and Databricks, streamlining data integration and transformation workflows.
- Leveraging Fivetran for seamless data integration and optimizing ETL workflows, improving data pipeline efficiency and ensuring timely availability of critical business data.
- Deploying and managing containerized applications using Kubernetes on Google Kubernetes Engine (GKE) to improve scalability, fault tolerance, and resource efficiency of data processing workflows.
- Implementing Kubernetes-based CI/CD pipelines using Terraform and GitHub Actions to automate deployments and infrastructure provisioning.
- Configuring and monitoring Kubernetes clusters to ensure optimal performance, high availability, and efficient resource allocation.

Data Engineer | IQVIA | Jan 2018 - Jun 2023

- Designed and implemented ETL pipelines to integrate, transform, and load high-volume data into cloud warehouses (Snowflake, Redshift, BigQuery), improving system performance and scalability.
- Built and optimized SQL queries, stored procedures, and data models to support advanced analytics and reporting for business stakeholders.
- Partnered with Salesforce administrators to enhance CRM data extraction (SOQL, SOSL), ensuring accurate and efficient reporting pipelines.
- Developed Tableau dashboards to deliver actionable insights on performance metrics, trend analysis, and operational efficiency.
- Automated recurring workflows and reporting processes with Python and SQL, reducing manual effort and improving turnaround time.

- Applied data auditing and quality checks to maintain accuracy, compliance, and governance across CRM and operational datasets.
- Streamlined order audit and data validation processes, significantly reducing handling times and ensuring compliance standards.
- Collaborated with cross-functional teams on business insights initiatives, using data-driven approaches to optimize workflows and reduce operational costs.

Data Analyst | Humana | May 2015 – Dec 2017

- Analyzed large datasets to identify trends, uncover insights, and provide actionable recommendations to improve business processes and sales performance.
- Utilized Excel functions and tools (filters, conditional formatting, and text-to-columns) to clean and prepare raw data for analysis.
- Performed descriptive statistics and data summarization using pivot tables and pivot charts.
- Applied advanced Excel functions (e.g., VLOOKUP, INDEX-MATCH, SUMIFS, and COUNTIFS) to analyze and aggregate data.
- Developed and optimized SQL queries for efficient data retrieval and processing, ensuring seamless integration with various data sources like MS SQL, PostgreSQL, and Redshift.
- Leveraged Python for data automation, cleaning, and analysis, improving data pipeline efficiency and reducing manual effort.
- Designed and implemented interactive Tableau dashboards that delivered real-time insights into KPIs, enabling swift decision-making.
- Utilized advanced features like calculated fields, parameter controls, and data blending to create visually compelling and comprehensive reports, enhancing business intelligence.
- Worked on creating interactive Tableau dashboards using filter, highlight, and URL actions.
- Integrated data from multiple sources including CRM platforms like Salesforce and OMS into Tableau to ensure real-time, comprehensive visualizations.
- Monitored data quality, conducted audits, and developed Standard Operating Procedures (SOPs) to ensure data integrity and compliance, improving accuracy and consistency across business operations
- Managed large datasets using cloud platforms like AWS S3, ensuring efficient storage and retrieval for reporting purposes.

EDUCATION

Master of Science (M.S.) in Computer Science
Texas State University – Jun 2013 – Apr 2015

Bachelor of Science (B.S.) in Computer Science
Texas State University – Sep 2009 – May 2013
