Professional Summary

Senior Data Engineer with **8 years** of experience designing and delivering modern data platforms with deep focus on the **Microsoft ecosystem**. Proven success building scalable **Azure Data Factory**, **Azure Databricks**, **Azure Synapse**, **ADLS**, and **Fabric**-ready solutions for analytics, migration, and enterprise data integration initiatives. Strong background in **advanced SQL**, **dimensional modeling**, **metadata-driven orchestration**, **API ingestion**, **OAuth 2.0**, and **JSON flattening/normalization** into analytics-ready SQL structures. Known for partnering with cross-functional stakeholders, leading design sessions, improving data quality and security, and mentoring engineers while translating business goals into repeatable, client-focused data strategies.

Technical Skills

- **Microsoft Data Stack:** Azure Data Factory, Azure Databricks, Azure Synapse Analytics, ADLS, Azure SQL Database, Azure Event Hubs, Azure Key Vault, Azure Purview, Microsoft Fabric
- **Architecture & Modeling:** Dimensional Modeling, Star Schema, Lakehouse Architecture, Metadata-Driven Pipelines, Data Integration, Data Migration, Data Quality, Reliability, Documentation & Diagramming
- **Programming & Data Processing:** Python, SQL, PySpark, Spark, Scala, Shell Scripting, Advanced SQL, Transform Logic, Performance Tuning
- **API & Ingestion:** REST APIs, OAuth 2.0, JSON Standardization, JSON Flattening, Normalization to SQL Structures, Batch and Near-Real-Time Ingestion
- **Orchestration & Streaming:** Azure Data Factory, Apache Airflow, Kafka, Azure Stream Analytics, Spark Streaming
- **Governance & Security:** Azure Purview, RBAC, IAM, Encryption, Row-Level Security, HIPAA, GDPR, Modern Data Security Architecture
- **DevOps & Delivery:** Azure DevOps, CI/CD, Docker, Kubernetes, Terraform, Jenkins, GitLab CI, Project Delivery & Cross-Functional Collaboration
- **BI & Reporting:** Power BI, Tableau, Semantic Reporting Layers, Analytics Enablement

Certification

- Microsoft Certified: Azure Data Engineer Associate (DP-203)
- Databricks Certified Data Engineer Professional
- Confluent Certified Developer for Apache Kafka (CCDAK)

Experience

Senior Data Engineer

HighMark Health

Aug 2024 – Present

Pittsburgh, PA

- Architected enterprise data pipelines in the **Microsoft ecosystem** using **Azure Data Factory**, **ADLS**, **Azure Databricks**, and **Azure Synapse** to integrate claims, enrollment, and clinical data from **10+ source systems** into a governed analytics platform.
- Led design sessions with analytics, actuarial, and business stakeholders to translate reporting and integration needs into scalable data strategies, reusable patterns, and delivery roadmaps.
- Developed **metadata-driven orchestration** frameworks in **Azure Data Factory**, improving modularity, automation, notification handling, SLA adherence, and operational support for critical pipelines.
- Designed and optimized **dimensional models** and curated reporting datasets in **Azure Synapse** for enterprise analytics and operational reporting, improving usability for downstream BI teams.
- Built high-performance transformations in **PySpark** on **Azure Databricks** and implemented **dbt** quality checks, improving scalability, reliability, and trust in analysis-ready data products.
- Integrated external healthcare APIs including **FHIR**-based interfaces, applying **OAuth 2.0**, JSON parsing, flattening, and normalization into SQL-ready structures for analytics consumption.
- Strengthened governance using **Azure Purview**, **AAD/RBAC**, encryption, and **Azure Key Vault**, aligning solutions with modern security architecture and compliance requirements including **HIPAA** and **GDPR**.

- Mentored engineers on Azure best practices, documentation, and data modeling standards while improving collaboration across engineering, reporting, and business teams.

Data Engineer

Jan 2022 – Jul 2024

Guardian Life Insurance

Remote

- Built and supported enterprise ETL/ELT pipelines that integrated policy, claims, and benefits data into cloud analytics environments, improving data availability for reporting and business intelligence teams.
- Partnered with senior engineers on data migration initiatives, modernizing legacy transformation logic into scalable cloud-native workflows with stronger monitoring and delivery controls.
- Designed reusable ingestion patterns for API and file-based data sources, including JSON standardization and normalization into relational structures for downstream analytics.
- Improved orchestration and dependency management across multiple subject areas, increasing reliability and reducing manual operational effort.
- Collaborated with BI stakeholders to publish consistent reporting datasets and support dashboard delivery for business-critical KPIs.
- Implemented data quality controls, metadata practices, and security standards that improved dataset consistency, discoverability, and audit readiness.
- Contributed to project planning, execution, and delivery across cross-functional teams, helping resolve critical issues and maintain stakeholder confidence.

Junior Data Engineer

Apr 2019 – Dec 2021

Liberty Mutual

Chicago, IL

- Developed data pipelines using **Azure Data Factory**, **Azure Blob Storage**, and **Azure Synapse Analytics** to ingest and transform policy, claims, and customer data for analytics use cases.
- Supported migration of legacy ETL jobs into the **Azure** ecosystem, improving maintainability, scalability, and accessibility for downstream consumers.
- Built and optimized **star schemas** and curated relational datasets for reporting, enabling faster dashboard development and better alignment with business requirements.
- Implemented **PySpark** transformations in **Azure Databricks** and automated workflows with **Azure Data Factory**, reducing manual intervention and improving repeatability.
- Created **Power BI** reporting datasets and worked closely with analysts to improve data definitions, dimensional structures, and reporting performance.
- Applied validation checks, SQL optimization, and partitioning strategies to improve data quality and query performance across business-critical workloads.
- Supported secure delivery through **RBAC**, encryption, and **Azure DevOps**-based deployment practices, while maintaining clear documentation for operational handoff.

Backend Developer

Feb 2018 – Mar 2019

Salesforce

Atlanta, GA

- Built integration services using **Python** and Salesforce APIs, improving data exchange between CRM and backend systems while reducing synchronization latency.
- Designed and optimized **RESTful APIs** and backend services that supported high-volume data movement and operational workflows.
- Automated batch processing and data migration using **Python** scripts, API integrations, and SQL-based extraction logic.
- Implemented secure access with **OAuth 2.0**, helping standardize external system connectivity and API authentication patterns.
- Supported CI/CD practices with Jenkins and GitLab, and contributed to code reviews, troubleshooting, and engineering best practices.

Education

Master's in Computer Science, Southern Illinois University Edwardsville, Edwardsville, IL
