

OLIVET KOJO ANSAH

California, USA

Kojoolivet1@gmail.com | (840) 278 0040

Summary

Cloud Data Engineer with 5+ years of experience designing, building, and optimizing scalable data platforms and ETL pipelines across Healthcare, Financial, and Retail domains. Strong expertise in Azure data services including Azure Synapse Analytics, Azure Data Factory, Databricks, and Microsoft Fabric, delivering reliable, high-performance analytics solutions. Proficient in SQL, Python, and DAX, with hands-on experience implementing CI/CD pipelines to automate data workflows. Proven ability to integrate data from multiple RDBMS sources, apply sound data modeling practices, and ensure data quality, security, and compliance. Known for collaborating effectively with cross-functional teams to translate business requirements into impactful, data-driven solutions.

Skills/Competency

Cloud & Data Platforms	Microsoft Fabric (OneLake, Lakehouse, Data Pipelines, Dataflows Gen2), Azure Databricks, Azure Synapse Analytics, Azure Data Lake Gen2, Azure SQL Database, Delta Lake, Snowflake, AWS S3
DevOps & Infrastructure	Azure DevOps (YAML Pipelines), Git, GitHub, JIRA, Docker, Terraform
Programming & Query Languages	SQL, T-SQL, PL/SQL, Python, DAX
Data Engineering & Processing	Apache Spark (PySpark), Delta Live Tables (DLT), dbt, ETL/ELT Design, Medallion Architecture, Streaming & Batch Processing
Business Intelligence & Semantic Modeling	Power BI (Service, RLS, Incremental Refresh, Direct Lake, Dataflows), Tableau, SSRS
Data Governance & Security	Unity Catalog, Microsoft Purview, RBAC/IAM, Azure Key Vault, Encryption (At Rest & In Transit)

Work Experience

Fabric/Databricks Data Engineer

Farmers Insurance, MD

February 2024 – Date

Duties

Microsoft Fabric (Primary Platform)

- Architected enterprise Lakehouse solutions in **Microsoft Fabric**, implementing Medallion Architecture across multiple business domains.
- Designed and built scalable data pipelines using Fabric Data Pipelines and Dataflows Gen2, ingesting structured and semi-structured data into OneLake.
- Engineered domain-oriented Lakehouses and optimized table structures using Delta format for high-performance analytics.
- Implemented OneLake Shortcuts to enable cross-domain data sharing without data duplication, reducing storage footprint and improving data accessibility.
- Designed and published enterprise Semantic Models leveraging Direct Lake mode to support near real-time Power BI analytics.
- Implemented row-level security (RLS) and workspace-based access controls integrated with Microsoft Purview governance policies.
- Monitored and optimized Fabric Capacity Metrics, tuning workloads and reducing compute costs by 30%.
- Established CI/CD processes using Git integration and Fabric Deployment Pipelines for automated promotion across Dev, Test, and Prod environments.
- Defined data governance standards including lineage tracking, classification, and auditing across workspaces.

Databricks (Supporting Compute & Advanced Processing)

- Built Delta Live Tables (DLT) pipelines for complex transformation logic and streaming ingestion use cases.
- Leveraged Databricks Auto Loader for incremental ingestion with schema evolution handling.
- Developed modular PySpark transformation frameworks to support reusable data processing patterns.
- Managed secure data access using Unity Catalog across multiple environments.

Data Engineer & Power BI Developer

Blue Cross Blue Shield, US

October 2022 – Feb 2024

Duties

- Designed and deployed scalable ETL/ELT pipelines in **Azure Synapse** and **Azure Data Factory**, integrating data from Blob Storage, SQL databases, and REST APIs.
- Processed large-scale datasets using Spark Pools and PySpark, optimizing partitioning and caching strategies for performance improvement.
- Built a logical enterprise data warehouse using Synapse Dedicated Pools to support ad-hoc and operational analytics.
- Automated trigger-based orchestration (event, scheduled, tumbling) for reliable and repeatable data workflows.
- Implemented enterprise-grade security including RBAC, data masking, managed private endpoints, and auditing to support HIPAA compliance.
- Developed interactive Power BI dashboards and KPI reporting solutions, enabling leadership to track operational performance in near real-time.
- Created advanced DAX measures and calculated columns to support complex reporting logic.
- Integrated on-premise systems using Power BI Gateway to maintain live reporting capabilities.
- Collaborated with DevOps teams to implement CI/CD pipelines via Azure DevOps for version control and automated deployments.

Data Analyst

Cigna Health and Life Insurance Company, TN

September 2020- October 2022

Project: Project: Enterprise Data Warehouse & Healthcare Claims Analytics Platform

- Designed and developed a centralized healthcare data store to support patient, medical staff, and claims data across 9 acute hospitals, outpatient facilities, specialty services, and affiliated physician groups in Northeast Tennessee.
- Improved administrative and insurance claims operations by enabling structured collection, integration, and analysis of lab tests, prescriptions, billing, and payment data.
- Developed executive-level visual analytics dashboards to enhance operational visibility and drive data-informed decision-making across clinical and administrative leadership teams.

Duties

- Conducted JAD session with Product Owner(s) to understand and design business rules for mapping document.
- Designed mapping document for various sources to Big Data Hadoop (Hive)
- Extracted data from several sources like PostgreSQL and applied several transformations to manipulate the data and loaded that transformed data into SQL server destinations using SQL server integration services (SSIS)
- Translated functional requirement received from stakeholders into technical specifications to be passed to the extraction, transformation and load (ETL) data warehouse team.
- Developed requirements definition of a data warehouse and business intelligence project to capture the needs of stakeholders.
- Ensured the integrity of project data, including data extraction, storage, manipulation, processing and analysis.
- Developed ETL mapping documents from data source to target.
- Developed and deployed executive dashboards for using Tableau software that helps analyze data in various aspects.
- Proposed technical feasibility solutions for new functional designs and suggested options for performance improvement of technical objects.
- Created Reports using maps in SSRS with help of spatial data.
- Used Power BI and Tableau to create visualizations.

Project: Project: Enterprise Data Warehouse & Wealth Management Analytics Platform

- Contributed to the design and development of an Enterprise Data Warehouse (EDW) for the Wealth Management division using Ralph Kimball dimensional modeling methodology.
- Developed tabular models using Azure Analysis Services to support scalable sales and portfolio performance reporting. Partnered with wealth management stakeholders to transform transactional and investment data into interactive Power BI dashboards, enabling trend analysis, revenue tracking, and business growth insights.
- Delivered executive-level reporting solutions that improved visibility into sales performance and client portfolio metrics.

Duties:

- Worked with key stakeholders and business leaders to develop analytic solutions leveraging Tableau, and the Microsoft BI Stack for new analytic capabilities.
- Developed reports, dashboards and other analytical solutions using various reporting solution tools.
- Planned, developed, and built consensus for data architecture enhancements and changes for Data Warehouse across the division.
- Provided in-depth analysis of existing datasets in the data warehouse, and provided insight on missing, inaccurate, or unreliable data by leveraging tools such as SAS, Power BI, and Tableau.
- Developed, enhanced, and maintained Tableau dashboards via SQL stored procedures, views, and queries.
- Responsible for standardizing datasets which will be compatible with datasets from Maintenance, Reliability, and Production for Predictive Analytics.
- Designed and developed the automation of annual planning for the Building Products Accounting Department by leveraging Excel VBA, MDS, Maestro, OLAP Cubes, and Tableau.
- SSIS and ETL design enhancements to increase efficiency and decrease system overhead. Implement improved logging capabilities for increased insight into job failures and performance.
- Develop SSIS Packages to Extract, Transform and Load (ETL)/DTS data into the Data warehouse from Heterogeneous databases.
- Designed and developed multiple SharePoint BI sites to serve as portals, and repositories for the Building Products Business Intelligence Solutions.
- Installed, modified, and repaired software and hardware to resolve technical issues.
- Performed tests of functionality, security and performance of different workstations and devices.
- Identified and solved technical issues using variety of diagnostic tools and tactics.
- Ensuring improvement of the two previous processes through analysis, reviews, and reporting, as well as through automation, competence building, knowledge sharing and other organizational changes.

EDUCATION / PROFESSIONAL COURSEWORK

Centennial College, CA
Cyber Security Masters Graduate, 2020

Ghana Technology University College, Ghana
BSc. Telecommunication Engineering, 2016
