

ALFRED OBUBO

+1 (972) 313-5310 | alfieobubo@gmail.com | Dallas, TX, USA | linkedin.com/in/alfred-obubo-305a481b6/

PROFESSIONAL SUMMARY

Highly qualified and dedicated Database Administrator with nine years of experience in the technical and functional operation and maintenance of relational database management systems. Expertise includes SQL Server administration (Production, Development, Test, Staging, Data Warehouse - OLTP & OLAP), cloud architecture provisioning (Virtual Machines, SQL Managed Instances, SQL Databases, MariaDB, PostgreSQL), database management in Microsoft Windows, Azure and AWS, cloud migration methodologies, and database security/permissions. Possesses a strong understanding of cloud computing architecture (IaaS & PaaS).

EDUCATION

Heriot-Watt University

Bachelor's, Chemical Engineering

October 2008 - June 2012

GPA: 3.0

PROFESSIONAL EXPERIENCE

Signify Health LLC

Database Administrator

Dallas, TX, USA

September 2021 - Present

- Responsibilities and Key Achievements:
- Managing and supporting over 200+ servers in PostgreSQL, SQL Server 2012-2022, Azure SQL Managed Instances and SQL Databases in development, test, and production environments.
- Implementing high-quality database infrastructure with DR fail-over groups, including the deployment of SQL Managed Instances, SQL Databases and PostgreSQL on the Azure platform.
- Producing high-standard database solutions by using Redgate SQL Monitor, SQL profiler, PGAdmin, Idera and other native troubleshooting tools to meet stability, reliability, and performance metrics.
- Generating De-identified data sets by utilizing Tonic and Delphix data masking tools in de-identifying data and restoring in lower environments.
- Migrating on-premises SQL Server databases to Azure SQL Databases and SQL Managed Instances and providing related support.
- Migrating Postgres databases and upgrading from version 11 to 14 using Azure Data Migration Service.
- Assisting developers and database engineers with database design, tables, views, triggers, query tuning, stored procedures, and related software.
- Fixing database performance, blocking, deadlock, connectivity, and security issues.
- Developing maintenance plan for database backups, index rebuilds, statistics updates, health monitoring, disk space management, and job scheduling automation scripts.
- Deploying and restoring databases, including point-in-time recovery.
- Implementing, designing, and applying high availability and disaster recovery solutions to minimize database downtime.
- Responsible for establishing and managing user principals and access levels across all server/database components to ensure the security of sensitive information.

Situs AMC

Database Administrator

Dallas, TX, USA

March 2019 - August 2021

- Responsibilities and Key Achievements:
- Managed Microsoft SQL Server technologies/features in development, test, and production environments.
- Proactively troubleshoot performance issues through SQL Server Error Log, Windows Event Logs, Profiler, Query Store, Execution Plan, Activity Monitor, DMVs and Red Gate SQL monitoring tool.
- Automated several database activities, including backups, rebuilding indexes, updating statistics, monitoring database health, disk space, and backup verification.
- Performed Database upgrades from SQL 2014 to SQL 2016, and migrations between TEST, DEV, QA, UAT, PROD environments.
- Create backup/restore strategies as well as Disaster Recovery Solutions.
- Generated data cleansing and manipulation stored procedures using DML commands to meet the Fair Credit Reporting Act (FCRA seven-year)'s reporting requirement for background check vendors.
- Integrated and managed Always-On Availability Groups, SQL Server Failover Clustered Instances, Log Shipping,

- Database Mirroring, and SQL Replication.
- Built and managed a failover cluster with Windows Server and SQL Server 2016.
- Managed logins and users, assign roles, auditing, applied least privileges and TDE to ensure data security.

John Lewis Partnership

Junior Database Administrator

Edinburgh, UK

October 2015 - November 2018

- Responsibilities and Key Achievements:
- Performed DBCC (database consistency checks), backups, restores, performance tuning, and optimization of recovery processes.
- Developed SQL logins for various roles and authentication modes as part of the process of putting in place security policies for different types of users.
- Applied all available service packs and hotfixes for Microsoft SQL Server 2008R2, 2012, and 2014 Enterprise Edition.
- Installed and configured Windows Server 2012R2 and SQL Server 2012 on-prem and in virtual machines.
- Improved query performance through routine index rebuilds and statistics updates.
- Responsible for keeping an eye on the server's usage, error logs, and any other issues that may arise.
- Completed database deployment and restoration, including rollback to a previous snapshot.
- Individually and collectively managed workloads to plan, design, and model complex systems before their physical realization.

SKILLS

Skills: SQL, Microsoft Azure, Agile, Confluence, JIRA, Operating Systems, Postgres, PowerShell, Snowflake, DevOps, Python, Machine Learning, SQL Server, Azure SQL Databases, SQL Managed Instance, MariaDB, SSMS, Activity Monitor, Query Store, Execution Plan, SQL Profiler, Configuration Manager, SSIS, SSRS, Always On Availability Groups, Replication, Log Shipping, Mirroring, Data Masking, Data De-identification, Redgate SQL Monitor, PGAdmin, Idera, Azure Data Migration Service, Windows Server 2000, Windows Server 2003, Windows Server 2008, Windows Server 2008R2, Windows Server 2012, Windows Server 2012R2, Windows Server 2016, Windows Server 2019, AZ-Copy, Azure Data Studio, Tonic, Delphix, Customer Support, Disaster Recovery, Capacity Planning, Database Security Management, Documentation, Cloud Migration, Cloud Computing Architecture, Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS)
