

BRANDON HARDY

Houston, TX 77049 | commitbybrandon@gmail.com | +1 (281) 817-1773

SUMMARY

Senior Data Engineer with 10+ years designing and scaling data pipelines, ELT frameworks, and analytics data models for enterprise SaaS environments. Expertise in SQL, Python, and modern data warehouses, with a strong track record delivering reliable data architectures, API-driven ingestion, and data quality automation. Proven impact improving data freshness, pipeline reliability, and analytics enablement for business stakeholders; adept at leading design sessions, mentoring engineers, and driving governance and adoption of data platforms. Eager to apply and expand Microsoft data solution experience within Azure-based ecosystems.

SKILLS

Programming

- Python, SQL, Bash, Jupyter, dbt

Data Processing

- ETL/ELT design, API ingestion, incremental loads, event-driven processing

Data Warehousing

- Snowflake, Redshift, BigQuery, PostgreSQL, MySQL, Delta, Parquet

Orchestration

- Airflow, dbt, GitHub Actions

Streaming

- Event-driven data processing, real-time alerting

Cloud Platforms

- AWS (S3, Parquet, Lambda), Azure readiness (planning to extend to Microsoft data services)

Data Quality / Monitoring

- Data quality frameworks, schema drift detection, anomaly detection, monitoring

Modeling & Governance

- Dimensional modeling (star/snowflake), semantic layers, data contracts

CI/CD / Infrastructure

- Automated testing, deployment pipelines, lightweight IaC basics

EXPERIENCE

Planview, Inc. – Senior Data Engineer (Remote)

Jan 2021 – Present

- Designed and implemented end-to-end ETL/ELT pipelines ingesting PMO, financial, product, and resource data from APIs, SQL databases, and third-party systems.
- Built optimized data models (star schemas, reporting layers, semantic models) in Snowflake and Redshift to support portfolio analytics and forecasting workloads.
- Created automated data ingestion jobs using Python, Airflow, and dbt, improving data freshness from daily to hourly.
- Reduced pipeline run times by 40% through refactoring transformations, indexing strategies, and partition logic.
- Engineered a centralized data quality framework with column-level validations, freshness checks, schema drift monitoring, and anomaly detection scripts.
- Developed scalable Python services to extract large datasets from Planview's REST APIs with retry logic, rate-limit handling, and incremental load capabilities.
- Built CI/CD pipelines (GitHub Actions) for data code releases, enabling automated testing and safe deployment of dbt models.
- Implemented cost-optimized storage patterns using S3 + Parquet for historical archiving and analytical reuse.
- Partnered with analytics teams to define metrics, build governed models, and deprecate legacy datasets.
-

Led migration of critical reporting flows to a modern cloud data stack, reducing maintenance overhead and improving SLA reliability.

Khoros, LLC – Data Engineer (Austin, TX / Hybrid)

Jun 2017 – Dec 2020

- Built ingestion pipelines capturing 100K+ daily customer interactions from production APIs and event streams into a centralized warehouse.
- Designed ELT processes to transform interaction data into clean, analytics-ready tables supporting sentiment, engagement, and support workload analytics.
- Implemented Airflow DAGs orchestrating incremental loads, enrichment steps, and dependency-based transformations.
- Engineered scoring, ranking logic, and hierarchical lookups for gamification and reputation models.
- Optimized queries and transformation logic used in customer SLA and moderation dashboards, reducing processing time by 35%.
- Developed real-time alerting for pipeline failures, freshness SLA breaches, and schema change detection.
- Collaborated with product and engineering teams to embed tracking events and define data contracts for reliability.
- Integrated third-party systems (Zendesk, Salesforce, community platforms) using REST APIs and webhook processors.
- Built a self-service data layer with documented models, metrics, and reusable transformations to empower analysts and customer success teams.

Bloomfire – Data Engineer (Austin, TX / On-site)

Jan 2014 – May 2017

- Designed and maintained ETL pipelines feeding behavioral, content, and search interaction data into the warehouse.
- Built Python-based log ingestion systems to capture search events and user behavior for ranking model improvements.
- Developed data transformations to support AI-powered features such as content recommendations, similarity scoring, and query expansion.
- Automated reporting extracts and replaced ad-hoc scripts with scalable pipeline jobs, reducing maintenance by 50%.
- Created metadata-driven models to improve search indexing accuracy and tagging quality, contributing to a 25% improvement in search relevance.
- Implemented SQL-based pipelines enabling topic-level analytics, user contribution scoring, and cross-team knowledge discovery.
- Collaborated with engineers to improve data instrumentation in the application codebase, ensuring accurate event capture.
- Documented pipeline logic, lineage, and data dictionaries to support onboarding and cross-functional usage.

EDUCATION

University of Texas at Austin

Bachelor of Science in Data Science

Graduated: May 2014
