Summary

Senior Data Engineer with 8 years of experience designing and implementing scalable data platforms and analytics solutions, with strong expertise in Microsoft data ecosystem and cloud-based architectures. Proven ability to architect robust data pipelines, dimensional models, and enterprise data strategies that align with business objectives and drive measurable outcomes. Advanced proficiency in SQL, Python, and distributed processing frameworks, with hands-on experience optimizing performance, reliability, and cost efficiency in production systems. Skilled in collaborating with cross-functional stakeholders, leading solution design sessions, and translating business requirements into scalable technical implementations. Experienced in mentoring engineers, establishing best practices, and delivering high-quality data solutions using modern data lakehouse principles. Passionate about continuous learning, client success, and building best-in-class data engineering solutions with strong governance, security, and scalability.

Skills

Microsoft Data Platform: Azure Data Factory, Azure Data Lake Storage (ADLS), Azure Databricks, Azure Synapse Analytics, Azure SQL Database, Microsoft Fabric, Power Platform

Data Engineering: ETL Development, Data Pipelines, Data Integration, Data Transformation, Metadata-Driven Pipelines, Data Orchestration

Databases Warehousing: MySQL, Microsoft SQL Server, PostgreSQL, SQLite, Snowflake, Dimensional Modeling, Star Schema, Data Warehousing

Big Data Processing: PySpark, Spark SQL, Distributed Data Processing, Batch Processing, High-Volume Data Systems

Programming: SQL, Python, API Integration, JSON Processing, OAuth 2.0, Data Transformation Logic

Cloud Architecture: Azure Cloud, Data Lakehouse Architecture, Data Lakes, Data Warehouses, Scalable Architectures, Security Architecture

Business Intelligence: Power BI, DAX, Looker, Apache Superset, Google Data Studio, KPI Reporting

Orchestration Automation: Workflow Scheduling, Automation Pipelines, Monitoring, Alerting Systems, CI/CD Basics

Data Governance Quality: Data Validation, Data Quality Frameworks, Data Governance, Data Lineage, Documentation

Collaboration Leadership: Stakeholder Management, Solution Architecture, Mentoring, Technical Leadership, Client Engagement

Work Experience

HITS — Kansas City, KS
Dec 2024 – Jan 2026

Senior Data Engineer

- Architected and implemented enterprise-grade data pipelines and lakehouse solutions using modern cloud data platforms, enabling scalable analytics, improved data accessibility, and alignment with business reporting objectives.
- Designed and optimized dimensional data models using star schema techniques, ensuring high-performance reporting and consistency across Power BI semantic models and enterprise dashboards.
- Developed advanced SQL and PySpark transformations to process large-scale datasets efficiently, improving data pipeline performance, reducing latency, and enhancing overall system reliability.
- Collaborated with cross-functional stakeholders, including analysts, cloud engineers, and business teams, to gather requirements and deliver scalable data solutions aligned with organizational goals.
- Implemented metadata-driven orchestration frameworks to standardize pipeline development, improve maintainability, and support reusable, modular data engineering patterns.
- Integrated data from APIs using OAuth 2.0 authentication and transformed complex JSON structures into normalized relational schemas suitable for analytics and reporting.

- Built monitoring, alerting, and data validation systems to ensure high data quality, detect anomalies, and maintain reliability across production data workflows.
- Led design sessions and technical workshops with stakeholders, providing architectural guidance and driving adoption of best practices in data engineering and analytics.
- Optimized cloud data platform costs and performance by tuning queries, restructuring storage, and implementing efficient data partitioning strategies.
- Mentored junior engineers, shared best practices, and contributed to building a culture of continuous learning, technical excellence, and high-quality solution delivery.

Entytle — Austin, TX

Aug 2020 – Sep 2024

Data/BI Engineer

- Designed and developed scalable ETL pipelines using cloud-based platforms to ingest and transform data from APIs, relational systems, and SaaS applications into centralized analytics environments.
- Built and optimized SQL-based data models and transformations supporting enterprise reporting, ensuring high data accuracy, consistency, and performance across multiple business functions.
- Implemented PySpark workflows for distributed data processing, enabling efficient handling of large datasets and improving scalability of batch processing pipelines.
- Developed dimensional models and star schemas to support business intelligence reporting and ensure efficient query performance for Power BI dashboards.
- Collaborated with product, sales, and operations teams to translate business requirements into technical data solutions that supported strategic decision-making.
- Integrated and normalized complex JSON data from external APIs into relational data structures, ensuring compatibility with downstream analytics systems.
- Implemented data quality checks, validation frameworks, and monitoring processes to maintain data integrity and reliability in production systems.
- Optimized pipeline performance using indexing, partitioning, and efficient query design, reducing processing time and improving data availability.
- Documented data models, ETL processes, and architectural decisions to ensure maintainability, knowledge sharing, and adherence to governance standards.
- Supported ad-hoc analytics and reporting needs by delivering clean, structured datasets and actionable insights to business stakeholders.

BlueOptima — Phoenix, AZ

Sept 2018 – Mar 2020

Data Analytics Engineer

- Developed and maintained data ingestion pipelines and analytics workflows to support business intelligence and reporting across multiple operational domains.
- Wrote and optimized complex SQL queries to support analytics use cases, improving query performance and enabling faster access to critical business data.
- Assisted in designing and implementing dimensional data models using fact and dimension tables, supporting scalable and efficient analytics workloads.
- Collaborated with stakeholders to gather reporting requirements and ensure consistent metric definitions across dashboards and analytical outputs.
- Identified and resolved data quality issues by analyzing source systems and transformation logic, improving accuracy and trust in reporting systems.
- Monitored ETL processes and addressed failures proactively, ensuring timely data delivery and minimizing disruptions to business reporting workflows.
- Enhanced performance of data pipelines through query optimization and improved data transformation strategies, increasing system efficiency and scalability.
- Supported BI tools by delivering validated datasets optimized for reporting and analysis, ensuring alignment with business needs and reporting standards.
- Contributed to documentation of data pipelines and models, supporting knowledge sharing and long-term system maintainability.
- Participated in continuous improvement initiatives by identifying inefficiencies in workflows and implementing solutions to improve performance and reliability.

Projects

Enterprise Lakehouse Data Platform

Designed and implemented a modern lakehouse architecture combining data lake and warehouse capabilities using cloud-native technologies. Built scalable ETL pipelines, standardized dimensional models, and implemented data governance practices to ensure high-quality and reliable analytics. Led architecture design sessions and collaborated with stakeholders to align solutions with business objectives. Developed monitoring and alerting systems to maintain system health and performance. Delivered a highly scalable platform that improved reporting efficiency and reduced operational costs.

API Data Integration and Transformation Framework

Developed a robust data integration framework to ingest and process data from multiple external APIs using OAuth 2.0 authentication. Implemented transformation pipelines to normalize and flatten complex JSON data into structured relational models suitable for analytics. Built reusable and modular pipeline components to improve development efficiency and maintainability. Enabled consistent and reliable data ingestion for business intelligence and reporting systems. Improved data accessibility and reduced latency in delivering insights to stakeholders.

Certifications

Microsoft Certified: Azure Data Engineer Associate

Microsoft Certified: Fabric Analytics Engineer Associate

Google Professional Data Engineer

AWS Certified Data Analytics – Specialty

Education

Arizona State University

Bachelor of Science

Aug 2014 – May 2018
