About Me

Senior Data Engineer with 8+ years of experience designing and building end-to-end data solutions for real-time analytics, business intelligence, and AI applications. Strong background in data pipelines, modeling, and platform architecture across AWS, Azure, and GCP environments. Delivered high-impact data solutions in e-commerce, logistics, and content, enabling faster insights, reliable reporting, and smarter decisions through strong cross-team collaboration.

Skills

- **Language:** Python, SQL, PySpark, Scala, Bash
- **Pipeline & Orchestration:** Apache Airflow, dbt, Apache Spark, Delta Lake, Kafka
- **Warehousing & Lakehouse:** Snowflake, Databricks, Redshift, BigQuery
- **Cloud Ecosystems:** AWS, Azure, GCP
- **BI & Visualization:** Looker, Tableau, Power BI, Metabase
- **AI & ML Pipelines:** MLflow, HuggingFace Transformers, Databricks ML
- **Graph & NoSQL Technologies:** Neo4j, AWS Neptune, DynamoDB, ClickHouse
- **Versioning & Testing:** GitHub, dbt Cloud, CI/CD, dbt tests, observability tools

Experience

Senior Data Engineer

Chewy

2022 - Present

- Built and maintained ETL pipelines for the Transportation Systems team using Azure Data Factory, PySpark, and SQL, ingesting logistics and fulfillment data into Azure Data Lake Gen2, Snowflake, and Delta Lake.
- Developed batch and streaming data pipelines using Databricks, Apache Spark, and Azure Event Hub, enabling near-real-time processing of delivery signals and exception alerts.
- Orchestrated workflows with Apache Airflow, scheduling and monitoring daily jobs across logistics, product, and customer datasets to maintain pipeline reliability and transparency.
- Led ML-Ops efforts by deploying a custom Feature Store in Databricks and enabling shared, reusable features for model development and experimentation using dbt for transformation logic.
- Built marketing analytics pipelines, integrating REST APIs and automating product feed updates, powering dashboards in Power BI and Tableau used by the campaign operations team.
- Designed and implemented a data quality monitoring system using dbt, Airflow, and Python, helping teams catch issues early and fix broken dashboards faster.
- Supported the Transportation Data Mart in Snowflake with dbt models, performance tuning, auditing, and user access control, enabling ad hoc exploration by analysts and data scientists.

Senior Data Engineer

Walmart Global Tech

2020 - 2022

- Designed and developed large-scale data pipelines using Apache Spark, Scala, and SQL on AWS and GCP to support Walmart's Pricing Intelligence platform, processing 15TB+ daily from internal retail, inventory, and sales systems.
- Implemented event-driven ETL workflows orchestrated via Apache Airflow, enabling reliable ingestion and transformation across multiple retail and logistics data domains.
- Led the build-out of a unified pricing metrics layer in dbt, providing consistent margin and profitability reporting across 6 international markets and reducing pricing discrepancies by 65%.
- Developed and optimized data models and marts in Snowflake and BigQuery, enabling downstream dashboards in Looker, Power BI, and Tableau used by over 1,500 stakeholders.
- Analyzed query patterns, storage usage, and warehouse configurations in Snowflake and BigQuery, optimized partitioning, clustering, and scheduling to improve performance and reduce unnecessary compute usage.
- Built a metadata-driven DAG generation framework in Airflow, enabling dynamic creation and management of 100+ data pipelines from standardized YAML configs.

Data Engineer

TikTok

2017- 2019

- Developed and optimized large-scale batch and streaming pipelines using Spark (Scala) and Kafka, supporting TikTok's ad reporting, engagement tracking, and creator analytics platforms at petabyte scale.
- Migrated user engagement data marts from Hive to Snowflake, improving query performance for product and growth teams by 60% and enabling cross-platform analytics.
- Built and maintained the Content Insights Hub in Tableau, integrating multilingual and regional engagement metrics to support global content strategy and business operations.
- Created modular SQL models and schema designs for campaign performance monitoring, working closely with data scientists and analysts to enable multi-dimensional ad spend and ROI analysis.

Education

Bachelor's Degree in Computer Science

Villanova University

2013 - 2017
