SUMMARY

Senior Data Engineer with 10+ years designing, developing, and optimizing large-scale data pipelines and analytics platforms. Expert in SQL performance tuning, data modeling (star/snowflake), and ETL/ELT frameworks across cloud environments. Proven track record building fault-tolerant data systems that improve data quality, latency, and reliability. Collaborative leader bridging data engineering, analytics, and product teams to transform raw data into actionable insights and measurable business outcomes.

SKILLS

Programming / Query Languages: SQL (advanced optimization, window functions, DDL/DML), Python, Scala
Data Processing / ETL-ELT: batch and micro-batch pipelines, data transformation, data cleansing
Data Warehousing / Modeling: Dimensional modeling, star/snowflake schemas, OLAP/OLTP, lake-house architecture
Orchestration / Scheduling: Apache Airflow
Big Data / Streaming: Apache Spark, Kafka
Cloud Platforms / Data Platforms: Snowflake, Redshift, BigQuery; AWS, GCP
Analytics / BI: Looker, Tableau, Power BI
Data Governance / Quality: Data lineage, metadata management, validation and reconciliation
DevOps / Infrastructure: Docker, Terraform, CI/CD pipelines

EXPERIENCE

SnapLogic

Senior Data Engineer

Beaverton, OR | June 2021 – Present

- Designed and built high-performance data pipelines integrating 25+ systems (SaaS apps, APIs, on-prem databases) using Snowflake, Airflow, and Spark.
- Developed complex SQL transformations and materialized views for multi-source analytics, reducing query latency by 35%.
- Authored reusable SQL templates and parameterized queries for common data ingestion and reporting patterns.
- Reduced data silos by 50% through unified ingestion and standardization pipelines across departments.
- Defined and enforced data governance and lineage frameworks, ensuring accuracy and regulatory compliance.
- Optimized SQL joins, partitioning, and clustering in Snowflake to reduce compute costs and improve scalability.
- Collaborated with DevOps on resource tuning for S3 and Redshift environments, saving ~\$40K annually.
- Mentored junior engineers on SQL performance debugging and query design best practices.
- Built dashboards in Looker powered by optimized SQL models for leadership KPI tracking.

Sigma Computing

Data Engineer II

Beaverton, OR | July 2018 – May 2021

- Migrated on-prem data warehouse to a cloud-native warehouse-first architecture with optimized SQL-based transformations.
- Designed dimensional data models and wrote performant SQL scripts for self-service analytics.
- Developed modular Python + SQL ETL pipelines processing billions of daily rows across product, sales, and operations datasets.
- Created parameterized SQL models supporting live queries and write-back features in the analytics layer.
- Tuned query plans and indexing strategies, improving dashboard load times by 25% and reducing compute overhead.
- Implemented row-level security and access control using SQL-based policies to ensure governed access.
- Introduced automated data quality checks using SQL validation rules and anomaly detection alerts.
- Authored documentation for SQL modeling conventions and data contract interfaces.

Clear Street

Data Engineer I

Beaverton, OR | June 2015 – June 2018

- Developed and maintained ETL processes with Python and SQL to integrate structured and semi-structured financial datasets.
 - Built SQL-based data validation routines and reconciliation reports, reducing data discrepancies by 40%.
 - Created partitioned tables, indexes, and optimized aggregation queries to reduce nightly processing by 3 hours.
 - Designed schema evolution strategies and SQL DDL scripts for high-volume trading and compliance data.
 - Partnered with business analysts to deliver parameterized SQL extracts and pre-aggregated datasets for analytics.
 - Assisted in deploying Airflow workflows that orchestrated SQL-based transformations and data validation jobs.
 - Documented SQL data models and supported onboarding of new engineers into ETL standards and warehouse design.
-

EDUCATION

Bachelor of Science in Data Science
Idaho State University — Idaho
Graduated May 2015

PROJECTS & HIGHLIGHTS

- Unified Data Platform: Integrated 25+ data sources into a centralized Snowflake warehouse using advanced SQL modeling and real-time ingestion.
 - Warehouse Optimization: Improved Redshift and Snowflake query performance by up to 40% through SQL plan tuning and materialized view strategies.
 - Analytics Enablement: Enabled self-service analytics through reusable SQL transformations and semantic layers for analysts and business users.
 - Team Development: Established SQL query standards and internal knowledge base, improving code quality and onboarding efficiency by ~30%.
-
