PROFESSIONAL EXPERIENCE

PayPal	Remote
Senior Software Engineer, Member of Technical Staff 1	July 2019 - Present
- Promoted 3 times in 7 years, architecting scalable payment infrastructure with TypeScript/Node.js powering PYUSD stablecoin platform and agentic commerce service across multi-chain networks for real-time transactions. - Built a Python based RAG-powered compliance internal chatbot using LangChain and FAISS for legal teams, reducing policy research time by 60% and enabling instant answers to 1,000+ monthly regulatory queries. - Designed event-driven microservices with Java/Spring Boot for stablecoin minting operations, orchestrating token burning and transfers with distributed transaction processing. Integrated Ethereum, Solana, Arbitrum, and LayerZero blockchain protocols using Web3 APIs for PYUSD platform, enabling cross-chain stablecoin transfers and smart contract interactions. - Built asynchronous Kafka and RabbitMQ pipelines for payment confirmation system, processing blockchain transaction events in real-time to ensure distributed ledger consistency. - Developed React and TypeScript interfaces for wallet management dashboards, creating checkout experiences with stablecoin balance tracking, yield monitoring, and AI product discovery. - Engineered RESTful and GraphQL APIs integrating Microsoft, Paxos, Shopify, and Stripe for Copilot Checkout, enabling merchant inventory surfacing and payment orchestration. - Constructed Apache Spark, Kafka, and AWS Glue ETL pipelines for compliance reporting platform, processing petabyte-scale blockchain data to generate real-time analytics dashboards. - Optimized PostgreSQL and Redis schemas for PYUSD transaction system, managing user holdings and blockchain metadata with sub-second query response times. - Deployed multi-region infrastructure on AWS and Azure using Kubernetes and Terraform for payment services, implementing GitHub Actions CI/CD with zero-downtime deployments. - Enforced PCI-DSS and AML compliance for stablecoin platform through AWS KMS encryption and automated audit logging, securing sensitive financial data across blockchain networks. - Established Jest, Pytest, and Cypress testing frameworks for payment flows, achieving comprehensive coverage across blockchain integrations and AI-powered commerce features. Mentored cross-functional teams across backend, blockchain, and AI domains for platform initiatives, leading architecture reviews and driving technical strategy for partner integrations.	

EDUCATION

Georgia Institute of Technology	
Master of Science - MS, Computer Science	Aug 2021 - Dec 2024
University of Maryland	
Bachelor of Science - BS, Computer Science	Aug 2015 - May 2019
Bachelor of Science - BS, Mathematics	Aug 2015 - May 2019
