I am excited to apply for the **Senior AI/ML Engineer / Data Scientist** role. With over 12 years of experience designing and deploying **production-grade machine learning, NLP, and LLM/RAG systems**, I specialize in building **secure, scalable AI platforms** that deliver measurable business impact across **healthcare, finance, and enterprise environments**.

At **CVS Health**, I led development of **LLM-powered clinical intelligence systems** for oncology and genomics, building **RAG pipelines using LangChain, FAISS, and GPT-4 APIs** to integrate **EHR/FHIR, genomic, and imaging data**. My work reduced **clinical report generation time from hours to minutes**, improved **insight delivery speed by 60%+**, and enabled **conversational AI agents** for querying complex biomedical data. I also designed and deployed **multimodal machine learning models** using **PyTorch, TensorFlow, and XGBoost**, improving prediction accuracy and reducing latency across production systems.

I bring deep experience in **MLOps and scalable AI infrastructure**, implementing automated **model training, validation, and deployment pipelines** using **MLflow, Airflow, and SageMaker**. I have deployed **microservices-based AI systems** on **AWS and Azure (ECS, AKS, Kubernetes)** with integrated **monitoring, drift detection, and observability**, while ensuring compliance with **HIPAA and SOC2 standards**.

Previously at **Texas Capital Bank**, I developed **NLP-driven document intelligence and risk analytics systems** using **BERT, spaCy, and TensorFlow**, improving **document classification and retrieval accuracy** and reducing manual review effort by over **40%**. I also built **data pipelines and analytics dashboards** that enabled stakeholders to make **data-driven risk decisions**.

Across my career, I have owned the full **AI lifecycle**—from **data engineering and experimentation** to **deployment, monitoring, and cross-functional collaboration**. I am passionate about building **trustworthy, explainable, and high-impact AI systems** that operate at scale and deliver real-world value.

I would welcome the opportunity to bring my expertise in **Generative AI, LLMs, RAG architectures, MLOps, and enterprise AI platforms** to your team. Thank you for your time and consideration.

Sincerely,
Emily A. Cisek
