

Jason Andrew Stewart

Clermont, FL | (321) 290-3761 | jasonandrewstewart17@gmail.com

SUMMARY

Senior Data Engineer with 10+ years designing and scaling data platforms for finance, healthcare, and enterprise SaaS. Expert in building high-throughput ETL/ELT pipelines, lakehouse architectures, data quality, and reliable analytics infrastructure. Proven track record processing multi-terabyte daily data, delivering latency reductions, cost savings, and strong data governance. Strong collaborator with analytics, BI, and data science teams, leading architecture, delivery, and mentorship across complex data initiatives.

SKILLS

Programming: Python, SQL, Scala, Bash

Data Processing: Apache Spark, Databricks, dbt, Airflow

Data Warehousing / Lakehouse: Delta Lake, Parquet, ORC, Redshift, Snowflake

Orchestration / Data Quality: Airflow, Great Expectations, Data Validation, CDC, Data Lineage

Cloud / Platforms: AWS (S3, Glue, EMR, Lambda, EC2, RDS)

Data Modeling: Dimensional modeling, Entity Resolution, CDC, Schema Evolution

Monitoring / Reliability: Prometheus, Grafana, Monitoring Dashboards

DevOps / Infra: Terraform, Docker, CI/CD (GitHub Actions, Jenkins)

EXPERIENCE

CloudHesive | Senior Data Engineer | Fort Lauderdale, Florida | Dec 2022 – Dec 2025

- Engineered Spark-based ETL pipelines on Databricks to process 5+ TB/day of multi-source data into Delta Lake, delivering scalable lakehouse capabilities.
- Built an entity resolution framework that merged 1B+ user records with 98% accuracy using PySpark and AWS Glue, driving reliable identity analytics.
- Deployed data quality validation layers with Great Expectations and automated anomaly detection via Airflow DAGs, improving data reliability and monitoring.
- Migrated legacy batch jobs to event-driven pipelines on AWS, reducing latency by 40% and compute costs by 25%.
- Partnered with data scientists to productionize ML-ready datasets and streamline model deployment workflows, accelerating analytics initiatives.

CareCloud | Senior Data Engineer | Miami, Florida | Nov 2014 – May 2022

- Developed incremental and partitioned data ingestion pipelines using Spark and PostgreSQL for patient analytics ecosystems.
- Built and managed data lakehouse architecture on AWS S3 and Databricks to support real-time insights for 10M+ records.
- Created custom Airflow operators to orchestrate ETL pipelines and automate schema evolution across data sources.
- Enhanced data reliability with monitoring dashboards (Prometheus, Grafana) and robust schema validation tooling.
- Led data migration initiative consolidating disparate systems into a unified cloud-based data warehouse (Redshift), enabling consolidated analytics.

AdventHealth | Data Integration Engineer | Altamonte Springs, Florida | Nov 2012 – Oct 2014

- Engineered data transformation and enrichment pipelines in Python and SQL for regulatory and analytics workloads.
 - Implemented CDC strategies to synchronize operational databases with analytical stores, improving data freshness.
 - Designed and documented data schemas, lineage, and design specs, improving maintainability and cross-team visibility.
 - Collaborated with analysts and BI teams to standardize reporting datasets and improved query performance by 30%.
-

EDUCATION

Bachelor of Science, Florida International University | May 2012

ADDITIONAL INFORMATION

- **Leadership:** Led design sessions, workshops, and training for internal and external stakeholders; mentored junior data engineers to adopt best practices.
 - **Data Governance:** Emphasis on data quality, lineage, and repeatable data patterns; strong documentation culture.
 - **Analytics Enablement:** Worked closely with BI and data science teams to deliver analytics-ready datasets and scalable pipelines.
-
