SUMMARY

Senior Data Engineer Consultant with over 10 years of experience architecting and implementing enterprise data solutions within the Microsoft ecosystem. Expert in Azure Data Factory, ADLS, Databricks, Synapse Analytics, and SQL. Proven ability to lead teams, mentor engineers, and drive adoption of modern data strategies to improve business outcomes. Skilled in dimensional modeling, API integration, and metadata-driven data pipelines.

SKILLS

- **Cloud & Data Platforms:** Azure Data Factory, Azure Databricks, Azure Data Lake Storage, Azure Synapse Analytics, Azure SQL Database, Microsoft Fabric
 - **Programming & Scripting:** Python, SQL, T-SQL, PowerShell
 - **Data Engineering:** ETL Design, Data Orchestration, Metadata-Driven Pipelines, Data Integration, Data Migration, Data Modeling, Dimensional Modeling, Star Schema Design, Data Quality Management, Data Automation, JSON Normalization, API Ingestion, OAuth 2.0
 - **Analytics & BI:** Business Intelligence Integration, Data Visualization, Reporting Optimization
 - **Architecture & Design:** Data Lake Architecture, Data Warehouse Architecture, Hybrid Data Models, Scalable Data Solutions, Security Architecture
 - **Project Management & Leadership:** Team Mentorship, Technical Leadership, Project Planning, Solution Design Workshops, Stakeholder Communication, Client Engagement, Documentation and Diagramming
-

EXPERIENCE

Senior Data Engineer Consultant | Boston Consulting Group

01/2023 – Present

- Architected enterprise-level data solutions leveraging Azure Data Factory, Databricks, and Synapse Analytics to support client analytics and business intelligence needs.
- Developed robust ETL pipelines using metadata-driven design, ensuring high reliability, automation, and scalability for complex data flows across multiple industries.
- Led design sessions and technical workshops with client teams to define data strategy, governance standards, and best practices aligned with business objectives.
- Mentored junior and mid-level data engineers on Azure technologies, data modeling techniques, and pipeline orchestration to enhance team capability and performance.
- Implemented dimensional modeling for reporting using star schemas, optimizing queries and ensuring consistency across data warehouse and analytics platforms.
- Integrated high-volume API data sources using OAuth 2.0, transforming JSON payloads into relational structures for seamless ingestion and analysis.
- Championed data quality initiatives by implementing automated validation, monitoring, and notification systems to ensure accurate and reliable datasets.
- Collaborated closely with business intelligence developers and Azure cloud administrators to create end-to-end data solutions that met client requirements and performance SLAs.
- Produced technical documentation and detailed architecture diagrams to ensure transparency, repeatability, and adherence to industry standards.
- Provided strategic guidance on modern data lakehouse adoption, combining best practices from data lakes and warehouses to drive scalability and efficiency.
- Owned client engagement processes by identifying challenges, proposing actionable solutions, and leading adoption of data engineering best practices across multiple projects.
- Ensured security and compliance in all data solutions, aligning with client and industry standards while maintaining high performance and modularity.

Senior Data Engineer | Philips Healthcare

07/2017 – 12/2022

- Designed and implemented end-to-end Azure-based data pipelines supporting healthcare analytics and operational reporting requirements.
- Developed complex SQL queries and ETL processes to integrate patient, device, and operational data from multiple sources into unified data models.

- Led cross-functional teams to optimize data ingestion, transformation, and storage strategies, improving reporting performance and scalability.
- Mentored data engineers in Azure technologies, advanced SQL, and dimensional modeling techniques to strengthen internal expertise and knowledge sharing.
- Built and maintained data warehouses using hybrid architecture, ensuring integration of data lake and relational storage for robust analytics.
- Conducted technical workshops and training sessions for internal stakeholders, emphasizing data governance and quality best practices.
- Implemented automated validation and monitoring systems to maintain data reliability, completeness, and accuracy across healthcare datasets.
- Collaborated with business analysts and reporting teams to define metrics, dimensions, and KPIs aligned with strategic business objectives.
- Provided architectural guidance on API-based data integration and JSON normalization for consistent and scalable ingestion pipelines.
- Prepared comprehensive documentation and diagrams to standardize processes and support ongoing operational and strategic initiatives.

Data Engineer | Tesla, Inc

08/2013 – 05/2017

- Developed and maintained ETL pipelines for automotive data using SQL Server and T-SQL to support reporting and analytics for manufacturing operations.
- Integrated multiple structured and semi-structured data sources, ensuring data consistency and accuracy across operational and analytical systems.
- Assisted in the design and implementation of relational and dimensional models for operational reporting and business intelligence initiatives.
- Collaborated with engineers and analysts to identify data requirements, define transformations, and optimize data storage for performance.
- Automated routine data processing tasks using SQL and PowerShell to increase efficiency and reduce manual intervention across workflows.
- Participated in API-based data ingestion projects, normalizing JSON data for integration with SQL databases and reporting solutions.
- Monitored data pipelines for errors and performance issues, implementing corrective actions and documenting best practices for team adoption.
- Supported project teams by delivering scalable data solutions aligned with manufacturing and operational analytics objectives.

- Prepared detailed technical documentation and diagrams to support pipeline maintenance and knowledge transfer across teams.
- Contributed to team knowledge sharing sessions and training initiatives, fostering continuous improvement and adoption of modern data practices.

EDUCATION

Bachelor of Science in Computer Science - The University of Texas at Brownsville (2013)
