

ALVIN ROBERTS

Duncanville, TX, 75137 | +1 (956) 264 1110 | alvindroberts7@gmail.com

SUMMARY

Data engineering professional with extensive experience in architecting robust data solutions within the Microsoft ecosystem, spanning 11 years. Proven expertise in Azure technologies and data integration to enhance performance and support impactful business decisions. Passionate about leveraging strong analytical abilities for data-driven insights while continuously embracing modern technology trends. Avid reader and technology enthusiast, dedicated to personal and professional growth through constant learning.

SKILLS

Azure Data Factory, Azure Databricks, Azure SQL Database, Azure Synapse Analytics, SQL, Data Warehousing, Data Lakes, Dimensional Modeling, Data Integration, Performance Tuning, APIs, OAuth 2.0, Python, Data Automation, ETL Processes, Data Governance, Data Analytics, Machine Learning, Business Intelligence, Spark, Microsoft Dynamics 365, Power Platform, Data Orchestration, JSON, Data Security, Metadata Management, Data Quality Assurance, Data Migration, Cloud Engineering, Data Management, Agile Methodologies, Project Management, Version Control, GIT, JIRA, Scrum, Data Visualization Tools, SSIS, SSAS, Data Mining, Business Solutions, Risk Assessment, Reporting Tools, Data Modeling, Automation Frameworks, Application Development, Big Data Technologies, Data Architecture, CI/CD Pipelines, Containerization, Docker, Kubernetes, Data Standards Development

EXPERIENCE

Automattic Senior Data Engineer

San Francisco, CA
Mar 2023 - Present

- Architected robust Azure Data Factory solutions for large-scale data integration projects, leading to improved project timelines and enhanced client analytics capabilities.
- Developed sophisticated dimensional modeling strategies using SQL and Azure SQL Database, significantly optimizing reporting accuracy and speed.
- Implemented enterprise-level cloud migration strategies, which streamlined data flows and enhanced scalability across client infrastructures.
- Collaborated with cross-functional teams to build comprehensive data solutions that met evolving business needs, ensuring seamless integrations and system upgrades.
- Led the design and execution of complex data pipelines with a focus on performance tuning and reliability, contributing to improved operational efficiency.
- Provided technical mentorship to junior data engineers, fostering a culture of continuous learning and implementing industry best practices in data engineering.
- Designed and conducted extensive workshops and training sessions, elevating the team's understanding of data orchestration techniques and integration methodologies.
- Championed best-practice standards for data governance and security, significantly reducing risks associated with data management processes.
- Spearheaded the adoption of automated testing frameworks for data pipelines, enhancing solution quality and resilience against failures.
- Consulted on architecture and technology strategies, ensuring alignment with client objectives and business growth through effective communication and collaboration.

Zapier
Senior Data Engineer

San Francisco, CA
Jan 2019 - Feb 2023

- Developed and optimized data pipelines using Python and SQL for real-time analytics, improving client reporting capabilities and decision-making processes.
- Worked with Azure technologies to facilitate seamless data migration and integration, resulting in increased data accessibility and flexibility for the clients.
- Collaborated with stakeholders to assess data requirements and implement customized data solutions, significantly enhancing system performance.
- Built and maintained ETL processes to ensure accurate data transformation and loading, contributing to reliable business intelligence outputs.
- Supported API integration efforts with OAuth 2.0 compliance, streamlining data input workflows and improving user experience for internal applications.
- Participated in cross-functional teams to identify and solve complex data integration challenges, leveraging data quality assurance practices to reinforce integrity.
- Spearheaded initiatives aimed at enhancing data automation practices, ultimately leading to time savings in project execution.
- Documented technical processes and workflow patterns to improve team efficiency and promote standardized practices across projects.
- Conducted training sessions to educate team members about using new data tools and methodologies, fostering skill development within the team.

Robotics Technologies LLC
Data Engineer

Duncanville, TX
Jul 2015 - Dec 2018

- Assisted in the development and maintenance of data architectures using Azure SQL technologies, improving data processing efficiencies on client platforms.
- Supported data integration efforts through API development, focusing on enabling smooth data interchange and enhanced application functionality.
- Engaged in data quality assessments to identify and rectify discrepancies, improving the accuracy of data outputs for business reporting.
- Collaborated with cross-disciplinary teams to implement effective data management solutions, aligning with best practices from various business units.
- Documented and refined existing data workflows using SQL and ETL tools, ultimately enhancing operational performance and compliance with standards.
- Leveraged cloud computing capabilities to support application development, resulting in rapid deployment and scalability for client projects.
- Developed initial training materials to equip clients on data reporting tools, enhancing their ability to leverage analytics effectively.
- Participated in data governance frameworks, assisting in creating guidelines for data usage and ensuring data security throughout the lifecycle.
- Implemented quality control measures on data streams, increasing reliability of system outputs and aligning with client business goals.

EDUCATION

B.S. in Computer Science
University of North Texas
Aug 2011 - May 2015
