Azure Data Factory | Azure Synapse Analytics | Azure Databricks | Azure Data Lake | Azure Event Hub | Power BI | Tableau | SSIS | Microsoft Fabric | Apache Spark | PySpark | Kafka | Hadoop | Event Hubs | Azure Stream Analytics | SQL | Data Lakes | Data Warehousing | SQL Server | Azure SQL DB | Azure Functions | Logic Apps | ETL | API integration | Databricks Notebooks | Python | Machine Learning | AI/ML | Cyber Security | CI/CD |

PROFESSIONAL SUMMARY

- **Data Engineering and Pipeline Development:** Proficient in designing and implementing end-to-end data pipelines with Azure Data Factory, Azure Functions, and Azure Databricks, enabling efficient data ingestion, transformation, and processing across distributed environments. Experienced in handling large-scale datasets within Azure Data Lake, optimizing performance through partitioning, compression, and caching techniques.
- **Data Warehousing and Analytics:** Experienced in architecting cloud-based data warehouses with Azure Synapse Analytics, integrating intricate data models, and enhancing SQL query performance for advanced analytics. Provided data-driven insights through Power BI and other BI tools, enabling informed business decisions.
- **Serverless Architecture and Automation:** Skilled in developing serverless workflows with Azure Functions, Logic Apps, and Event Grid for real-time data processing and automation. Designed event-driven architectures for seamless streaming data ingestion, enabling low-latency processing and real-time decision-making.
- **Data Security and Governance:** Implemented encryption, role-based access control, and Azure Active Directory policies to safeguard data at rest and in transit, ensuring compliance with security standards. Experienced in managing data governance and monitoring using Azure Monitor, Azure Security Center, and Azure Policy.
- **AI/ML Integration:** Integrated Azure Machine Learning services and Databricks to build and deploy machine learning models within Azure pipelines, enhancing predictive analytics and strengthening business intelligence capabilities.
- **Big Data Frameworks:** Skilled in leveraging Apache Spark and PySpark on Azure Databricks for distributed data processing. Optimized job execution and cluster performance to enhance efficiency while minimizing costs.
- **Infrastructure as Code and Automation:** Streamlined infrastructure deployment and management with Terraform and Azure DevOps, enabling fast, repeatable, and scalable deployments across multiple environments.
- **Cost Optimization:** Reduced operational costs by 30% through Azure Spot Virtual Machines, autoscaling, and pay-as-you-go storage, optimizing resource utilization and efficiency.
- **Advanced Analytics and BI:** Designed advanced Power BI dashboards and reports to deliver real-time business insights and support data-driven decision-making. Worked collaboratively in Agile environments to develop and deploy end-to-end data solutions, ensuring timely and high-quality outcomes.

TECHNICAL SKILLS:

Software Development Life Cycle (SDLC)	Agile, Scrum, Kanban, Waterfall methodologies
Big Data Ecosystem	Apache Spark, Azure Databricks, Synapse Analytics, Data Lake Storage, Event Hubs, Data Factory, HDInsight, Stream Analytics, Kafka, HDFS, PySpark
Cloud Platforms	Microsoft Azure, AWS (Amazon Web Services)
Data Warehousing & Analytics	Synapse Analytics, Azure SQL Data Warehouse, Cosmos DB, Analysis Services, Data Lake Analytics
Serverless Computing	Azure Functions, Logic Apps, Azure API Management, AWS Lambda, AWS Step Functions, AWS API Gateway
Big Data Technologies & Tools	Azure Databricks, Spark/PySpark, Azure Data Lake Storage, Azure HDInsight, Azure Stream Analytics, Azure Data Factory, Snowflake, Kafka Streaming, Hive, Snowflake, Map Reduce, HDFS, Sqoop, Flume, Kafka, Oozie, Trino
Orchestration & Containerization	Azure Data Factory, Azure Logic Apps, Azure Kubernetes Service (AKS), Terraform, Docker, Kubernetes, Airflow, Docker, AWS ECS, AWS EKS

Machine Learning and AI Frameworks	Azure Machine Learning, Databricks MLflow, TensorFlow, Scikit-learn, PyTorch, Keras, Amazon SageMaker
Statistical & Predictive Analytics	Logistic Regression, Linear Regression, Support Vector Machines, Decision Trees, Time Series Forecasting, Neural Networks
Deep Learning Techniques	Neural Networks, Convolutional Neural Networks (CNN), Recurrent Neural Networks (RNN), Long Short-Term Memory (LSTM)
Deep Learning Frameworks	TensorFlow, PyTorch, Keras
ETL & Business Intelligence (BI) Tools	Azure Data Factory, Azure Logic Apps, Azure Databricks, Power BI, Azure Synapse Analytics, SSIS, AWS Glue, Informatica, Tableau, AWS QuickSight, SSRS, Snowflake, Microsoft Fabric
Continuous Integration & Deployment (CI/CD) Tools	Azure DevOps, Git, GitHub, Jenkins, AWS CodePipeline, AWS CodeBuild
Ticketing & Issue Tracking Tools	JIRA, Azure Boards
Operating Systems	Linux, Windows, Ubuntu, Unix, iOS
Databases (RDBMS & NoSQL)	MySQL, Azure SQL Database, Cosmos DB, Microsoft SQL Server, Azure Storage
Programming & Scripting Languages	Python (Pandas, NumPy, SciPy, PySpark), Java, SQL, Scala, Shell Scripting, C#
Data Warehouse (DWH) Schema Designs	Star Schema, Snowflake Schema
Data Modeling & Design Tools	Erwin, Microsoft Visio, Azure Data Catalog
Web & Application Servers	Azure App Service, Azure Functions
Version Control Systems	Git, Azure Repos, GitHub
BI & Reporting Tools	MS Excel, Power BI, Azure Synapse Analytics, SSRS, Tableau, QlikView, DAX Queries

PROFESSIONAL EXPERIENCE

Fiserv, Milwaukee, WI

Dec 2023 to present

Senior Data Engineer

- Developed efficient and scalable ETL pipelines using Azure Data Factory, Azure Databricks, and Snowflake to extract, transform, and load financial data from multiple sources, ensuring accuracy and consistency throughout the pipeline.
- Designed and implemented data warehousing solutions on Snowflake, enhancing the efficiency of complex financial queries and cutting down reporting time by 30%.
- Created and deployed ETL processes using SSIS for extracting, transforming, and loading financial data, automating intricate workflows, and boosting pipeline efficiency with Snowflake as the destination data warehouse.
- Streamlined real-time event processing with Azure Event Hubs and Azure Functions, enhancing fraud detection and transaction monitoring by cutting down response times.
- Integrated data from third-party credit agencies into Snowflake, improving risk assessment and customer profiling for loan approval decisions.
- Migrated legacy financial systems to Azure and Snowflake, enhancing availability, performance, and scalability for essential financial applications.
- Developed data security protocols with Azure Active Directory, Azure Key Vault, and Snowflake's security features, ensuring compliance with industry standards like PCI-DSS for secure management of financial data.
- Enhanced batch processing performance on Azure Databricks and Snowflake, boosting efficiency of large-scale financial data transformations by 40%.
- Built a data governance framework with Azure Purview and integrated it into Snowflake, ensuring precise metadata management and tracking of data lineage for financial reporting.
- Created custom data marts in Snowflake for financial reporting, enhancing the speed and accuracy of compliance audits and regulatory submissions.
- Developed serverless workflows with Azure Logic Apps and Azure Functions to automate critical financial processes, minimizing manual effort and lowering operational costs.
- Built a data lake architecture on Azure Data Lake Storage and integrated it with Snowflake, centralizing transactional data storage and enhancing analytics capabilities.
- Developed dashboards and reports with Power BI using data from Snowflake, delivering real-time insights into loan processing, fraud detection, and transaction performance.

- Enhanced data ingestion workflows by configuring Azure Data Lake Storage, Azure Data Factory, and Snowflake, minimizing data latency and improving the processing of large financial transaction volumes.
- Conducted disaster recovery planning with Azure Blob Storage and Snowflake's failover features, ensuring secure and redundant backups for critical financial data.
- Streamlined infrastructure deployment by utilizing Azure Resource Manager (ARM) templates and Snowflake's automation tools, enhancing deployment speed and consistency for financial applications.
- Tracked and optimized data processing workflows with Azure Monitor and Snowflake's performance features, ensuring optimal performance for real-time financial analytics.
- Utilized Azure Data Migration Service to transfer financial data from on-premises databases to Azure SQL Database and Snowflake, ensuring seamless migration with no downtime and maintaining data integrity.
- Developed SQL scripts and Snowflake-specific queries to validate data integrity and performance, ensuring adherence to financial testing standards and regulatory compliance.
- Enhanced SSIS ETL processes by implementing custom scripting, improving package performance and enabling tailored transformations for financial data, resulting in better data quality and reduced processing times.
- Collaborated with risk and compliance teams to integrate real-time data validation and risk assessment workflows using Azure Functions, Cosmos DB, and Snowflake, boosting the efficiency of fraud detection.
- Implemented cost optimization strategies with Azure Reserved Instances, auto-scaling, and Snowflake's cost management tools, resulting in a 20% reduction in cloud infrastructure expenses.

Environment: Microsoft Azure (Azure Data Factory, Azure Databricks, Azure Event Hubs, Azure Functions, Azure Logic Apps, Azure Data Lake Storage, Azure Blob Storage, Azure SQL Database, Azure Active Directory, Azure Key Vault, Azure Purview, Azure Monitor, Azure Resource Manager, Azure Data Migration Service).

Atlantic Health, Morristown, NJ

Apr 2022 to Dec 2023

Data Engineer

Responsibilities:

- Developed data pipelines using Azure Data Factory and Azure Databricks to ingest data from Electronic Health Records (EHR), clinical systems, and medical devices into Azure Data Lake Storage, ensuring smooth and efficient data integration.
- Built a data lake architecture on Azure Data Lake Storage, centralizing storage for various healthcare data sources and enhancing accessibility for downstream analytics.
- Processed healthcare data, including EHR and clinical data, ensuring HIPAA compliance and the secure management of sensitive patient records.
- Possesses extensive experience with healthcare data standards like HL7, FHIR, and X12, ensuring secure and compliant data exchange across systems.
- Implemented data flows utilizing EDI formats to optimize the exchange of healthcare transactions, including insurance claims and patient data, across various providers.
- Managed complex healthcare reporting scenarios using DAX expressions in Power BI, delivering advanced and interactive insights for stakeholders.
- Optimized data warehousing with Azure Synapse Analytics, improving real-time healthcare analytics and decreasing query response times by 30%.
- Led the design and maintenance of complex relational database systems to enhance data storage and retrieval efficiency.
- Built and managed efficient ETL pipelines using SSIS and Azure Data Factory, ensuring smooth data integration and transformation for large-scale enterprise systems.
- Set up real-time data streaming with Azure Event Hubs, providing timely insights into patient data and clinical workflows.
- Integrated predictive models using Azure Machine Learning for patient risk stratification and outcome prediction, improving decision-making with AI-driven insights.
- Ensured HIPAA compliance by implementing encryption for both data at rest and in transit, and also enforced role-based access control through Azure Active Directory.
- Orchestrated data workflows with Azure Logic Apps to automate the end-to-end healthcare data processing pipeline, enhancing workflow efficiency.
- Implemented ETL processes with Apache Spark on Azure Databricks for large-scale data transformation, reducing processing time by 40% for clinical and operational data.
- Developed disaster recovery workflows with Azure Blob Storage for data backup and archival, ensuring high availability and fault tolerance of critical healthcare data.
- Streamlined CI/CD pipelines with Azure DevOps, accelerating healthcare application deployments and reducing delivery times.
- Implemented serverless architecture using Azure Functions and Azure Logic Apps, ensuring cost-effective, real-time ingestion and integration of healthcare data.

- Created custom data marts in Azure Synapse Analytics for clinical and financial reporting, enhancing the granularity and accuracy of healthcare insights.
- Developed interactive Power BI dashboards, providing actionable insights into patient care, hospital performance, and clinical workflows.
- Migrated on-premises healthcare systems to the cloud with Azure Data Migration Services, enhancing data accessibility and reducing latency by 30%.

Environment: Microsoft Azure (Azure Data Factory, Azure Databricks, Azure Synapse Analytics, Azure Data Lake Storage Gen2, Azure Event Hubs, Azure Functions, Azure Logic Apps, Azure Machine Learning, Azure Active Directory, Azure Blob Storage).

HCA HealthCare, Nashville, TN

Aug 2020 to Mar 2022

Power BI Developer

Responsibilities

- Designed, developed, and tested solutions for business user specified requirements to achieve desired business results.
- Participated in the daily standup with business teams to resolve the business issues and Data challenges.
- Hands-on experience in the design, development of end user applications for the data presentation and analytics, including scorecards, dashboards, reports, monitors, and graphic presentation (Information Visualization & Analysis) using POWER BI.
- Experience using formula languages such as Data Analysis Expressions (DAX).
- Create reports in Power BI Desktop and Service utilizing the connectors and content pack.
- Expertise in creating reports from importing, Direct Query and Live data from several data sources.
- Worked with healthcare datasets including clinical KPIs, patient admission rates, treatment timelines, and lab results to generate dashboards for hospital performance analysis.
- Configure data intake using Query and its formula language, M'.
- Created different reports in Power BI Desktop and publish to Power BI online.
- Skilled at querying relational databases (SQL) and ability to pull data from various sources.
- Imported data from different data sources to create Power BI reports and dashboards.
- Utilized Power BI (Power View) to create various analytics dashboards that depicts critical KPI along with slicers and dicers enabling end -user make filters.
- Created reports like Drill-Down, Drill-Through, Chart, Sub Reports Bar charts, Line charts, Pie charts, etc.
- Working extensively building Power BI Dashboards with quick insights into KPIs and Advance analysis actions, Calculations, Parameters, Maps and Scatter plots, heat maps, setting alerts.

Environment: Microsoft Power BI, SQL Server, Excel, MS Visual Studio, Windows 2008

PNC Bank, Dayton, OH

Nov 2018 to Aug 2020

Power BI Developer

Responsibilities

- Involved in design, development, data analysis, identifying and gathering business requirements, user testing and maintenance of BI applications and information systems including database management systems MS SQL Server.
- Designed and developed Data models to connect all the incoming/onboarded funds.
- Developed and executed ETL Packages using SQL Server Agent/SSIS to migrate the incoming transactional data from various systems into the Datawarehouse.
- Designed and developed complex paginated reports using Microsoft Report Builder and SSRS, enabling detailed transaction-level and summary reporting for large datasets.
- Create SSRS reports and upload them into Cascade to be previewed by the fund accountants.
- Convert Microsoft access Databases to SQL server databases for Trade Capture Application.
- Extensive use of GIT for code check-in and Confluence for documenting the workflow process.
- Extensive data modelling in SSAS to create cubes for efficient reporting.
- Extract data from Various internal API's/Databases into Power BI and create data models to be used by different financial teams.
- Worked closely with insurance datasets involving policy, claims, underwriting, and loss ratios to develop reporting solutions focused on key P&C insurance KPIs such as loss ratio, combined ratio, earned premium, and claim severity.
- Setup Power BI report server which can be used for paginated (existing SSRS reports) and new PBI reports.
- Developed Power BI dashboards and data models for investment analysis and portfolio performance reporting in support of capital markets and real estate investment teams.
- Implemented the Power BI gateway to keep Dashboards and reports up to date with on-premises data sources.

- Gathered report requirements and determined the best solution to provide the results in either a Reporting Services report or Power BI.
- Installed and configured Power BI Desktop.
- Created Power BI Visualizations and Dashboards as per the requirements.
- Created effective reports using visualizations such as Bar chart, Clustered Column Chart, Waterfall Chart, Gauge, Pie Chart, Tree map etc. in Power BI.
- Writing complex SQL Queries, Stored Procedures, Triggers, Views, Cursors and User Defined Functions to implement the business logic.
- Optimized queries by looking at Execution Plan for better tuning of the database.
- Used Temp Tables to reduce the number of rows for joins, to aggregate data from different sources for different reports.
- Performed database backup and deployment to the production server.
- Created detail technical documentation of various staging area operations for future reference and guidance.
- Involved in Normalization and De-Normalization of existing tables for faster query retrieval
- Involved in SIT (System Integration Testing) and UAT testing, bug fixing and documentation for the project.
- Designed STAR, SNOWFLAKE Schemas.

Environment: MS SQL Server 2016, SSIS, SSRS, SSMS, Visual Studio 2013, Power pivot, T-SQL, Power BI, MS TFS, JIRA, VB.Net
