

ENOW MBI

TX, US | +1740-438-4106 | nowenowforever@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior Database Engineer with over 8 years of experience designing and optimizing database environments across Azure, AWS and GCP. Skilled in SQL Server installation, configuration, performance tuning, high availability and disaster recovery strategies, combined with CI/CD and Infrastructure-as-Code automation. Proven track record building secure, scalable data architectures and streamlining operations to support mission-critical applications.

EMPLOYMENT HISTORY

PARTECH

2020 - Present

SR. DATA ENGINEER

Remote, US

Project: Fraud Detection Platform (Azure & AWS Hybrid)

- Developed and maintained hybrid data pipelines using Azure Data Factory (ADF) to ingest sensitive card transactions from Azure SQL DB to ADLS Gen2 and subsequently to Synapse Analytics, ensuring data integrity, high availability, and disaster recovery readiness.
- Designed robust data architectures with Azure Data Lake Storage for raw/curated zones, implementing access controls via RBAC and managed identities and configuring geo-redundant storage for high availability to support compliance requirements.
- Built and deployed cross-cloud ETL jobs using Airflow (AWS MWAA) and ADF triggers to integrate Azure-hosted APIs with Redshift, enhancing data processing capabilities.
- Created dbt models in Synapse and Redshift for real-time fraud scoring, reinforcing scalable data warehousing solutions.
- Implemented row-level security in Synapse for regulatory compliance (PCI-DSS) to secure sensitive information.
- Established CI/CD pipelines using Azure DevOps for deploying ADF pipelines and Synapse artifacts, leveraging continuous integration, continuous delivery, and infrastructure-as-code practices to accelerate delivery cycles.
- Integrated Azure Databricks for real-time streaming jobs using Spark Structured Streaming and automated cluster provisioning with PowerShell scripts, enabling efficient processing of large datasets.
- Optimized query costs in Synapse through partitioning and materialized views, demonstrating proficiency in database management.
- Monitored pipeline health using Azure Monitor and Log Analytics, incorporating PowerShell automation for alert remediation and proactive performance optimization.
- Collaborated with stakeholders to deliver comprehensive fraud analytics dashboards using Power BI and Redshift Spectrum, supporting cross-functional decision-making.

Innovation HQ

Jan 2017 - Nov 2019

DATA WAREHOUSE ENGINEER

Remote

Project: Clinical Data Platform (GCP + Azure Synapse)

- Migrated clinical and insurance datasets from on-prem SQL Server to Azure Synapse and BigQuery, enhancing data warehousing capabilities, configuring Always On availability groups, and improving overall database infrastructure management.
- Developed scalable pipelines in Azure Data Factory to transform EHR data with scheduled triggers, embedding infrastructure-as-code definitions and automated deployments to maintain consistency across environments.
- Built dbt models and maintained documentation for reproducible data transformation, reinforcing robust ETL processes.
- Created shared datasets in Power BI with DAX measures to support analytic processes across hospital reporting teams.
- Orchestrated daily synchronization of lookup data using ADF and REST API connectors, ensuring optimized operational process integration.
- Automated schema change propagation from SQL Server to Synapse using Python, PowerShell, and ADF, demonstrating proficiency in multi-cloud environments and streamlining ETL processes.
- Designed secure lakehouse architecture in ADLS with Gen2 access tiers and lifecycle rules, aligning with data security measures.
- Monitored resource usage with Azure Cost Management to optimize budget and maintained data quality through continuous validation.
- Led a training program for junior engineers on the Azure stack, driving cross-functional collaboration and knowledge sharing.
- Ensured HIPAA compliance through Azure Private Link and encryption in transit/at rest, reinforced with automated compliance checks via PowerShell scripts and integrated CI/CD validation pipelines.

EDUCATION

University of Buea

BSC, COMPUTER SCIENCE

Cameroon

SKILLS

- **Languages:** SQL, MySQL, Python, Bash
- **Cloud Platforms:** Azure, ADF, Synapse, ADLS, Databricks, AWS, Redshift, S3, Glue, Lambda, GCP, BigQuery, Dataflow, Microsoft Certified Azure Database Administrator Associate
- **Data Engineering:** dbt, Apache Airflow, Azure Data Factory, Azure Databricks, Kafka, Spark, Hadoop, Data Pipeline Development, ETL Tools Talend, ETL Processes
- **Warehousing:** Azure Synapse, Redshift, BigQuery, Snowflake, PostgreSQL, SQL Server, Database Management, Data Warehousing
- **DevOps & Agile:** GitHub Actions, Terraform, Azure DevOps, Docker, Jenkins, CI/CD, Continuous Integration, Continuous Delivery, Infrastructure-as-Code, PowerShell, Agile Methodologies
- **Monitoring:** Azure Monitor, Datadog, CloudWatch, Prometheus, Grafana
- **BI/Reporting:** Power BI, Looker, Tableau
