

Brian Gou

Senior Data Engineer

(929) 547-6426 • goubrian.ai05@outlook.com • Tustin, CA • [linkedin.com/in/brian-gou-5838541a7](https://www.linkedin.com/in/brian-gou-5838541a7)

ABOUT ME

Senior Data Engineer with 8+ years delivering scalable data platforms within the Microsoft ecosystem, specializing in **Azure Data Factory, Azure Databricks, ADLS, Synapse Analytics, SQL, and Dimensional Modeling**. Proven ability to architect lakehouse solutions, lead teams, and translate business requirements into production-grade data systems that improve reliability and time-to-insight.

RELEVANT SKILLS

Cloud Platforms:	Azure ADLS, Azure Data Factory, Azure Databricks, Azure Synapse Analytics, Azure SQL Database, Azure Key Vault, Azure Entra ID
Data Warehousing & ETL:	ETL design, ELT with dbt, Dimensional modeling, Star schema, Data pipelines, Workflow orchestration, Data quality checks
Programming Languages:	Python, SQL, Scala, Bash, Java, R
Databases:	SQL Server, Azure SQL Database, Synapse, Snowflake, PostgreSQL, Oracle
Big Data Tools:	Apache Spark, Databricks, Airflow, Kafka, Delta Lake, Hive
Business Skills:	Stakeholder communication, Data storytelling, KPI design, Analytics delivery, Project leadership, Cross-functional collaboration

WORK EXPERIENCE

Senior Data Engineer	UnitedHealth Group
Los Angeles, CA	Feb 2023 - Feb 2026 (3 yrs)
- Architected enterprise claims lakehouse using Azure Databricks, ADLS, and Azure Data Factory, enabling ingestion, transformation, modeling, and analytics pipelines for 5TB datasets, improving SLA compliance by 35% across reporting layers - Designed metadata-driven pipelines with Azure Data Factory and SQL, orchestrating ingestion, transformation, and deployment workflows for claims and provider data, reducing manual effort by 40% and improving pipeline reliability - Built dimensional models with Synapse Analytics and SQL, supporting ingestion, transformation, modeling, and BI analytics for healthcare metrics, delivering 25% faster query performance for executive dashboards - Implemented Delta Lake optimization using Databricks and Spark, handling ingestion, transformation, pipelines, and monitoring of claims data, reducing storage costs by 30% and improving batch processing throughput - Established CI/CD workflows using Git and Azure DevOps, integrating ingestion, transformation, deployment, and monitoring pipelines, ensuring 99.9% pipeline uptime and reducing release failures by 20% - Led data governance initiatives using Azure Key Vault and Entra ID, securing ingestion, transformation, modeling, and analytics workflows for PHI data, achieving full HIPAA compliance across systems - Mentored 6 engineers on Databricks and Azure Data Factory, guiding ingestion, transformation, pipeline design, and analytics practices, improving team delivery velocity by 30% across multiple projects - Developed monitoring frameworks with Spark and SQL, supporting ingestion, transformation, pipelines, and alerting workflows for claims datasets, reducing incident response time by about 40%	

Data Engineer	Meta
Menlo Park, CA	Aug 2022 – Feb 2023 (7 mos)
Built large-scale clickstream pipelines using Spark and Hive, enabling ingestion, transformation, modeling, and analytics workflows for 3TB daily data, improving query efficiency by about 30%	

- Designed distributed ETL pipelines with **Airflow** and **Python**, supporting ingestion, transformation, deployment, and monitoring of user interaction datasets, increasing data freshness by 25%
- Optimized query performance using **Presto** and **SQL**, improving ingestion, transformation, analytics, and reporting pipelines for engagement metrics, reducing latency by 20%
- Implemented data validation frameworks with **Python** and **Spark**, covering ingestion, transformation, pipelines, and monitoring for clickstream data, reducing data quality issues by 35%
- Collaborated with analysts using **Hive** and **SQL**, enabling ingestion, transformation, modeling, and analytics for product metrics, accelerating dashboard delivery timelines by 30%

Data Engineer

Amazon

San Francisco, CA

Oct 2021 – May 2022 (8 mos)

- Developed scalable pipelines using **Spark** and **Python**, enabling ingestion, transformation, modeling, and analytics workflows for transaction datasets, processing 2TB daily data efficiently
- Built orchestration workflows using **Airflow** and **SQL**, supporting ingestion, transformation, deployment, and monitoring pipelines for e-commerce metrics, improving reliability by 25%
- Optimized ETL jobs with **Spark** and **SQL**, improving ingestion, transformation, analytics, and reporting pipelines for customer data, reducing processing time by about 35%
- Designed infrastructure automation using Terraform and **Python**, enabling ingestion, transformation, deployment, and monitoring for pipelines, reducing provisioning time by 40%
- Collaborated with product teams using **SQL** and **Python**, supporting ingestion, transformation, modeling, and analytics workflows, improving data accessibility for stakeholders by 30%

SQL Data Engineer

UnitedHealth Group

Los Angeles, CA

Sep 2017 – Oct 2021 (4 yrs)

- Developed ETL pipelines using **SQL Server** and **Python**, supporting ingestion, transformation, modeling, and analytics workflows for claims data, improving data accuracy by 25%
- Built star schemas with **SQL** and **SSIS**, enabling ingestion, transformation, modeling, and reporting for healthcare analytics, reducing query time by 30%
- Implemented data validation checks using **SQL** and **Python**, covering ingestion, transformation, pipelines, and monitoring workflows, reducing data inconsistencies by 20%
- Automated workflows using **SSIS** and Bash, enabling ingestion, transformation, deployment, and monitoring for claims datasets, improving pipeline efficiency by 25%
- Collaborated with stakeholders using **SQL** and Excel, supporting ingestion, transformation, modeling, and analytics workflows, improving reporting accuracy and usability
- Designed relational schemas using **SQL Server**, enabling ingestion, transformation, modeling, and reporting pipelines for claims systems, improving maintainability by 30%

SQL Developer

Tenet Healthcare

Dallas, TX

Sep 2016 – Aug 2017 (1 yr)

- Developed stored procedures using **SQL Server**, enabling ingestion, transformation, modeling, and reporting workflows for patient data, improving report generation time by 20%
- Built SSIS packages using **SQL** and SSIS, supporting ingestion, transformation, deployment, and monitoring pipelines for healthcare datasets, improving ETL efficiency by 25%
- Designed reports using SSRS and **SQL**, enabling ingestion, transformation, analytics, and reporting workflows for hospital metrics, improving decision-making speed
- Collaborated with analysts using **SQL** and Excel, supporting ingestion, transformation, modeling, and analytics workflows, improving data accessibility for reporting teams

- Eastern University
Master of Science (Data Science)
St. Davids, Pennsylvania
2022
- University of La Verne
Master of Business Administration (Information Technology)
La Verne, California
2017
- Jiangsu University
Bachelor of Science (Auto Engineering)
Zhenjiang, Jiangsu Province
2014

LICENSES and CERTIFICATIONS

- Amazon Redshift Development & Administration | Udemy (2017)
- Big Data with Apache Spark and Python | Udemy (2020)
- AWS Certified Cloud Practitioner | AWS (2019)
