

Allan Hoang

Senior Data Engineer Consultant

allandhoang@gmail.com | (518) 241 - 3803 | Pembroke Pines, FL 33028

SUMMARY

Senior Data Engineer with 10 years of experience delivering enterprise-grade Microsoft data solutions, specializing in Azure Data Factory, Synapse Analytics, and Azure SQL Database. Skilled in architecting data pipelines, dimensional modeling, and data lakehouse integration for scalable analytics. Proven track record mentoring teams and leading solution design to optimize business outcomes and data quality.

SKILLS

- **Data Engineering:** Azure Data Factory, Azure Databricks, Azure SQL Database, Synapse Analytics, ADLS, Data Orchestration, ETL Pipelines, Dimensional Modeling, Data Lakehouse
 - **Programming & Scripting:** Python, SQL, T-SQL, JSON Parsing, PowerShell, PySpark, Spark SQL, REST API Integration, OAuth 2.0
 - **Data Tools & Platforms:** Microsoft Azure, Power Platform, Data Analytics, Fabric, Azure Functions, Azure Logic Apps, SQL Server Integration Services (SSIS), SQL Server Reporting Services (SSRS), Azure Synapse Pipelines
 - **Project Management:** Agile Methodology, Scrum, JIRA, Confluence, Solution Architecture, Technical Leadership, Mentorship, Documentation Best Practices, Workshops & Training
 - **Data Quality & Governance:** Data Profiling, Data Standardization, Data Normalization, Data Transformation, Data Validation, Data Security, Scalable Data Solutions, Automation & Notification
-

EXPERIENCE

Senior Data Engineer | Conde Nast

07/2021 ~ 12/2025

- Designed and implemented enterprise-scale Azure data pipelines using Data Factory, Databricks, and Synapse Analytics to process high-volume media analytics data with optimal performance and reliability.
- Developed complex dimensional models, including star schemas, to support reporting and BI dashboards for global media properties, ensuring alignment with industry best practices.

- Architected metadata-driven ETL processes that automated data ingestion, transformation, and storage workflows, reducing manual intervention by 60 percent.
- Collaborated with BI developers, Azure administrators, and business analysts to deliver integrated solutions that improved cross-departmental data accessibility and insights.
- Led internal workshops and webinars to upskill junior engineers on modern Azure data engineering practices, including Spark optimization and Azure SQL tuning techniques.
- Implemented data validation and quality checks using Python and SQL scripts, ensuring accuracy, completeness, and compliance with internal and regulatory standards.
- Optimized data pipelines for scalability and modularity, allowing rapid deployment of new projects across multiple Conde Nast properties without disruption.
- Standardized JSON ingestion processes, flattening and normalizing complex structures to relational tables to enable efficient analytics and reporting.
- Mentored a team of data engineers by reviewing code, recommending architectural improvements, and promoting adoption of best practices across the Azure ecosystem.
- Produced comprehensive documentation and data flow diagrams to support solution maintenance, client onboarding, and knowledge transfer across engineering teams.
- Advised business units on data strategy and pipeline improvements, aligning engineering solutions with strategic objectives and operational KPIs for content performance.
- Implemented monitoring and alerting frameworks within Azure, enhancing data pipeline reliability and ensuring rapid issue resolution for mission-critical datasets.

Senior Data Engineer | Clearsense, LLC

01/2020 ~ 07/2021

- Architected and maintained Azure-based data pipelines, integrating healthcare data from multiple sources into a unified analytics platform for enterprise clients.
- Developed and optimized SQL Server and Synapse SQL queries to support large-scale reporting and analytics for healthcare operations and patient management.
- Standardized ETL processes, ensuring accurate ingestion, normalization, and transformation of JSON-based API data into structured relational tables.
- Collaborated with cross-functional teams including business analysts and Azure administrators to design scalable, secure, and compliant data solutions.
- Implemented Azure Databricks workflows for batch processing of high-volume healthcare datasets, improving data pipeline performance by 40 percent.
- Conducted technical training and mentoring sessions for junior engineers, promoting adoption of Microsoft best practices in data engineering and pipeline design.
- Developed monitoring dashboards to track pipeline performance, data quality, and error handling, ensuring regulatory compliance and operational efficiency.
- Optimized storage and compute usage in ADLS and Azure SQL Database, reducing costs while maintaining high-performance analytics capabilities.
- Designed reusable templates for pipeline orchestration, accelerating deployment of new data sources and reducing time-to-production for analytics projects.

- Led workshops with client teams to review data architecture, identify bottlenecks, and recommend actionable improvements to optimize reporting and analytics outcomes.

Data Engineer | Florida Blue

11/2018 ~ 01/2020

- Built and maintained ETL pipelines using SSIS and Azure Data Factory to integrate member and claims data from multiple internal and external sources into centralized analytics databases.
- Developed SQL-based data transformation scripts to clean, standardize, and structure healthcare datasets for reporting and business intelligence use cases.
- Implemented monitoring and error-handling processes to ensure high reliability and data quality in production data pipelines across multiple business units.
- Collaborated with business analysts and IT teams to define requirements and deliver scalable, compliant data solutions that improved decision-making processes.
- Created dimensional models for claims and member analytics, enabling efficient aggregation, trend analysis, and dashboard reporting for internal stakeholders.
- Optimized Azure SQL and Synapse queries to enhance performance of large-scale data extracts, supporting operational and strategic analytics initiatives.
- Documented pipeline workflows, metadata schemas, and operational procedures to facilitate knowledge transfer and ensure sustainable support of production systems.
- Mentored junior data engineers, providing guidance on SQL optimization, Azure best practices, and pipeline development to enhance team capabilities.

Data Analytics Associate | Ernst & Young

07/2017 ~ 11/2018

- Supported the design and implementation of ETL workflows using SQL Server Integration Services for client financial data analytics projects across multiple industries.
- Developed and optimized SQL scripts to transform and aggregate large datasets, enabling accurate and timely reporting for auditing and consulting engagements.
- Collaborated with senior data engineers to implement data quality checks, validations, and transformations in compliance with client standards and regulatory requirements.
- Created reports and dashboards using SSRS and Power BI to visualize key performance indicators and provide actionable insights to client teams.
- Documented data models, ETL processes, and technical specifications to support project audits, maintenance, and future scalability of client data solutions.
- Participated in client workshops and technical reviews, offering recommendations for process improvements and automation in data analytics pipelines.

EDUCATION

Master's degree in Data Analytics - Colorado State University (2021)

Bachelor's degree in Information Technology - The University of Central Florida (2017)
