

KAYODE HABIB ALAKA

Senior Data Engineer Consultant | Microsoft Data Solutions | Cloud Platforms | ETL Optimization

6025626064 • habibalaka9@gmail.com • <https://www.linkedin.com/in/kayode-alaka-7b2608203/> • Phoenix, Arizona

Summary

Senior data engineer with extensive expertise in developing scalable ETL/ELT pipelines and optimizing cloud data infrastructure on platforms like Snowflake, Azure, and GCP. Proven track record of reducing SQL query runtimes by over 40% and delivering cost-efficient data solutions that enhance analytics accuracy and business insights. Skilled in managing cross-functional collaboration and driving data modernization initiatives aligned with organizational goals in fast-paced environments.

Experience

The Hartford

Data Engineer

01/2022 - Present

- Optimized database systems, reducing SQL query runtime by 42% across 200+ queries, ensuring seamless performance and security.
- Engineered scalable data pipelines with Python and Spark, processing over 3 TB daily and delivering CRM insights via Snowflake and Databricks.
- Architected enterprise data solutions on Azure, utilizing Azure Data Factory, ADLS, Azure Databricks, and Synapse for robust, secure data platforms.
- Designed star schemas and complex SQL transformations for efficient reporting and analytics.
- Developed automated ETL/ELT pipelines, ensuring data quality and scalability, with integration from REST APIs to SQL structures.
- Led client design sessions, translating business needs into data architectures while facilitating best practice adoption.
- Managed Azure cloud deployment automation with IAC and Azure DevOps, enhancing CI/CD processes and ensuring stable releases with PowerShell and GitFlow.

Vbcare

Phoenix, AZ

BI Data Engineer - Contract

01/2021 - 01/2022

- Built and maintained data services on GCP, integrating analytics pipelines with backend systems, enabling scalable data-driven applications using Ruby on Rails.
- Developed and automated end-to-end ETL/ELT solutions with PySpark/Airflow and Snowflake, reducing runtime by 40% and costs by 30%.
- Processed high-volume data for analytics using Azure Data Factory and Databricks, optimizing SQL queries and reducing processing time.
- Collaborated with BI developers and cloud teams on integrated data solutions, enhancing analytics and KPI visibility.
- Led data integration and migration of legacy systems to cloud, modernizing setups and improving efficiency.
- Architected cost-effective storage and data quality frameworks with Snowflake and S3, ensuring compliance with standards.
- Contributed to data documentation and governance standards, enhancing transparency and maintainability of systems.

Blue Cross and Blue Shield of Arizona

Phoenix, AZ

Power BI Developer

09/2021 - 12/2021

- Enhanced data accessibility by 70% and integrated 20 data sources using SQL-based reporting systems.
- Improved data retrieval speed by 40% through Star schema design in Power BI for efficient modeling.
- Designed and built modern data warehouse solutions, combining data lakes and relational systems applying lakehouse architecture.
- Developed scalable data pipelines and transformations, ensuring data consistency and integrity across systems.
- Created executive dashboards in Power BI and Tableau for strategic insights, collaborating with stakeholders for accuracy.
- Led teamwork across engineering, sales, and ops through analytics solutions with strong problem-solving and communication skills.
- Implemented ETL pipelines for real-time data integration into SaaS dashboards.

Ciox health

Phoenix, AZ

Data Analyst - Contract

01/2020 - 12/2020

- Created weekly attendance and PTO reports reviewed by managers
- Optimized SQL queries and Power BI dashboards for improved performance
- Developed ETL pipelines integrating structured and semi-structured data
- Increased profit outcomes by 50% in 2 quarters through effective management
- Designed dashboards improving visibility into clinical and claims metrics
- Automated database maintenance and alerting to support 24x7 environments

Experience

Mckesson

Phoenix, AZ

Analyst - Contract

01/2019 - 12/2019

- Developed Excel-based solutions for data extraction, transformation, and relational table loading, enhancing reporting efficiency.
- Migrated reports from Excel to Power BI, building models and metrics for advanced data insights and visualization.
- Automated data processes using SQL, Macros, and VBA to streamline report generation and improve data accuracy.
- Achieved 20% project efficiency increase by implementing detailed tracking systems, ensuring timely and budget-compliant project delivery.
- Built Python models to analyze media spend efficiency and optimize campaign performance, identifying key causal insights.
- Designed interactive dashboards in Tableau and Power BI, supporting real-time insights into feature usage and operational metrics.
- Partnered with stakeholders to deliver impactful statistical insights, enhancing decision-making across multiple business areas.

Morrison Healthcare

Phoenix, AZ

Analyst - Contract

06/2018 - 12/2018

- Provided support to other senior analysts on data collection, extraction, aggregation, cleaning, dealing with missing values in data, building chart and graph profiles and presenting reports to senior stakeholders
- Created Service-Level Agreement Reports that display processed claims by team members and defects
- This also included claim counts based on SLAs defined by the business and clients as well as related KPI information
- Implemented multiple operational and process metrics in Power BI reports and dashboards; these are monitored by process owners and managers
- Developed and maintained complex SQL queries and views to support business processes & operations
- Created monthly Ad HOC reports that display call dropped and escalation rates

Projects

ETL/ELT Solutions Development

Phoenix, AZ

01/2021 - 01/2022

BI Data Engineer - Contract at VBCARE

- Built and maintained ETL/ELT solutions using Python and SQL, migrating data flows into Snowflake, resulting in improved cloud data warehousing.
- Enhanced SQL query and data model optimization leading to a ~40% reduction in report runtime and 30% cost savings.
- Developed end-to-end ETL/ELT pipelines with PySpark and Airflow, automating data ingestion and transformation processes.
- Implemented data validation, lineage, and quality monitoring frameworks for trusted data delivery, ensuring analytics compliance.
- Architected cost-efficient data storage solutions using Snowflake and S3 for high-throughput analytics workloads.
- Collaborated with analytics teams to create data marts and dashboards, enhancing visibility into KPIs and cloud spending insights.
- Streamlined database operations with automation tools, increasing efficiency and reliability by reducing manual effort.

Data Visualization and Dashboard Development

Phoenix, AZ

09/2021 - 12/2021

Power BI Developer - Contract at Blue Cross and Blue Shield of Arizona

- Created big data datasets in Snowflake using Snowsql and SQL, enhancing data management with CTE, partitioning, and indexing techniques.
- Designed and implemented Power BI star schema models and developed executive-level dashboards using Tableau, supporting strategic planning and operational insights.
- Led the development of scalable data models and aggregates for business reporting, focusing on performance and analytical flexibility.
- Partnered with stakeholders to improve dashboard usability and adoption, ensuring clear visual narratives and insights for business metrics.
- Led data visualization with Power BI for C-level executives, focusing on clarity, accessibility, and storytelling.
- Utilized DAX and M query in Power BI to create calculated measures and flexible parameters, optimizing business logic application and environment transitions.

Projects

Operational Reporting and Data Analysis

Phoenix, AZ
01/2020 - 12/2020

Data Analyst - Contract at CIOX HEALTH

- Created weekly Ad HOC reports that displayed employee attendance, PTO hours, and sick time; these reports are reviewed and monitored by managers and directors.
- Conducted performance tuning on SQL queries and enterprise-wide Power BI dashboards.
- Built database objects like tables, keys, and constraints as part of a physical model for the inbound and outbound calls business processes.
- Worked with the business units to identify key performance indicators and metrics that helped with operational reporting and analysis.
- Collaborated with healthcare stakeholders to translate business needs to technical specs. Supported regulatory analytics.
- Developed and executed numerous Ad HOC T-SQL queries to support data requests from the business units.
- Created Excel report that calculated and reported sales conversion based on calls received.

Data Extraction and Reporting

Phoenix, AZ
01/2019 - 12/2019

Analyst - Contract at MCKESSON

- Enhanced database efficiency, achieving a 35% improvement, by implementing Excel-based data extraction and loading solutions.
- Improved customer service quality by 45% by developing Excel-based KPIs and analyzing call drop rates.
- Pulled data from SQL Server databases and Excel files and built automated solutions (Macros and VBA) to provide seamless data extraction and transformation for reports.

Data Collection and Reporting

Phoenix, AZ
06/2018 - 12/2018

Analyst - Contract at Morrison Healthcare

- Provided support to other senior analysts on data collection, extraction, aggregation, cleaning, dealing with missing values in data, building chart and graph profiles and presenting reports to senior stakeholders.
- Improved claims processing efficiency by 30% by creating SLA reports that detailed 20 claim counts and defects.

Key Achievements

Optimized SQL Performance

Reduced average query runtime from 120s to 70s.

ETL/ELT Cost Efficiency

Implemented framework reducing report runtime by 40% and costs by 30%.

Enhanced Data Reporting

Improved reporting accuracy by 20% using Python scripts.

Boosted Profit Outcomes

Increased profit by 50% within two quarters through effective management.
