## SUMMARY

Results-driven data engineering professional with extensive experience **designing and implementing scalable data solutions and pipelines**. Adept at collaborating within agile teams to support **data migrations, performance enhancements, and data-intensive applications**. Strong background in **data processing, storage, and integration**, with a focus on delivering **robust and maintainable data systems**, seeking to apply technical expertise and leadership capabilities to impactful **data projects**.

## SKILLS

- **Data Engineering:** Data pipelines, ETL/ELT workflows, data modeling, orchestration frameworks
- **Programming & Processing:** SQL, scripting, distributed data frameworks, workflow automation
- **Data Platforms:** Relational and non-relational databases, data lakes/warehouses, file-based storage
- **Cloud & DevOps:** Cloud-based data services, CI/CD, containerization, automation tools
- **Tools & Frameworks:** Version control, task/project management tools, monitoring, and observability solutions

## WORK EXPERIENCE

SENIOR DATA ENGINEER

FEB 2020 – PRESENT

*47Billion – Santa Clara, CA*

- Designed and supported modular data pipelines, integrating multiple structured and unstructured sources for enterprise reporting.
- Developed and optimized workflows for ingesting, cleansing, and transforming high-volume datasets.
- Implemented monitoring and alerting practices to ensure the reliability of recurring jobs and scheduled tasks.
- Collaborated with data analysts and stakeholders to align data models with reporting and analytics needs.
- Contributed to agile practices by actively participating in sprint planning, reviews, and retrospectives.
- Supported the deployment of data solutions using automated processes to maintain consistency across environments.

DATA ENGINEER

SEP 2016 – JAN 2020

*Entegee - Burlington, MA*

- Assisted in maintaining enterprise-scale data systems, improving data integration and flow across platforms.
- Supported data storage and retrieval processes to ensure accurate and timely access for applications and reports.
- Participated in the enhancement of reporting solutions by aligning backend workflows with business logic.
- Created reusable scripts and tools to support recurring data transformation and quality checks.
- Worked within agile teams, contributing to feature enhancements and iterative improvement of data solutions.

## PROJECTS

### *Compliance Management Portal*

- Developed key backend modules for the data processing pipeline using scalable frameworks, automating compliance checks and policy enforcement for regulatory agencies.
- Designed and implemented secure, multi-tenant authentication systems using modern identity management practices to ensure role-based access control and maintain comprehensive audit trails.
- Built RESTful APIs for managing accreditation documents, workflows, and real-time audit statuses, enabling the frontend to pull real-time data and improve reporting accuracy.
- Integrated Azure Blob Storage with secure access controls and SAS tokens to handle sensitive, HIPAA-compliant documents.
- Refactored monolithic logic into a microservices-based architecture, improving deployment flexibility, reducing risk during releases, and enabling efficient testing and scaling of components.
- Developed interactive dashboards with React and Chart.js to provide real-time visualizations of compliance metrics, enabling users to track accreditation status and policy enforcement.

### *Setforth*

- Designed and developed scalable RESTful APIs using modern frameworks to handle complex financial analysis modules, such as debt-to-income evaluation, payment simulations, and eligibility scoring.
- Built dynamic, user-friendly dashboards using Vue.js to allow clients and agents to visualize various debt resolution options and interactively fetch data from backend APIs.
- Optimized PostgreSQL queries with Dapper for efficient data retrieval from large datasets, improving response times under high-traffic conditions.
- Implemented Redis caching to store frequently accessed data such as scoring rules, reducing load on the primary database and improving system performance.
- Containerized the application using Docker to ensure consistency across development and production environments and deployed it to AWS EC2 instances for scalable hosting.
- Configured AWS CloudWatch for comprehensive monitoring and logging, providing real-time insights into application performance and enabling quick identification of issues.

## EDUCATION

**Bachelor's in Computer Science** from the **UCP**
