SUMMARY

Versatile and detail-oriented Data Engineer with extensive experience designing, building, and maintaining scalable data pipelines and warehouse solutions. Skilled in developing ETL/ELT workflows, optimizing SQL queries, and orchestrating complex data workflows across distributed systems. Experienced in working with cross-functional teams to transform raw data into actionable insights and support business intelligence initiatives. Passionate about building reliable, high-performance data ecosystems that empower analytics and data science teams.

TECHNICAL SKILLS AND EXPERTISE

- **Data Engineering & ETL:** Python, SQL (T-SQL, MySQL), PySpark, Pandas, dbt, Airflow, Databricks
- **Data Warehousing:** Snowflake, Azure Synapse, BigQuery, Redshift
- **Data Pipelines & Integration:** Kafka, Azure Data Factory, Glue, REST & GraphQL APIs
- **Cloud Platforms:** Azure (Data Lake, Functions, Service Bus, Key Vault), AWS (S3, Lambda, Glue)
- **DevOps & CI/CD:** GitHub Actions, CircleCI, Azure DevOps
- **Other Skills:** Data Modeling, Agile Methodology, Collaboration, Communication, Problem-Solving

KEY ACHIEVEMENTS

- Architected a cloud-native data platform on Azure/Snowflake with standardized ingestion patterns, curated transformation layers, and governance practices adopted across multiple teams.
- Modernized legacy ETL into orchestrated, code-centric pipelines using Airflow/Databricks, establishing reliable scheduling, observability, and secure credential management with Key Vault.

PROFESSIONAL EXPERIENCE

VERIGENT - HUNTERSVILLE, NC

Senior Data Engineer

Jan 2022 - Present

- Designed and implemented end-to-end ETL pipelines to process and transform structured and semi-structured data into Azure Data Lake and Snowflake.
- Built automated workflows using Airflow and Azure Data Factory, ensuring timely ingestion of data from APIs, relational databases, and flat files.
- Developed reusable SQL scripts and optimized queries for reporting and analytics teams to access consistent, high-quality data.
- Collaborated with product owners and analysts to define data requirements, implement business logic transformations, and maintain data accuracy.
- Applied data quality checks, logging, and monitoring frameworks to ensure reliability and reduce data pipeline failures.

KYRA SOLUTIONS - LAKELAND, FLORIDA

Data Engineer II

Aug 2018 - Dec 2021

- Developed batch and streaming data pipelines leveraging PySpark and Azure Functions to support reporting dashboards and operational workflows.
- Integrated data from multiple internal and third-party systems, building standardized schemas for downstream consumption.
- Designed and maintained data models for transactional and analytical use cases, improving maintainability and consistency.

- Built parameterized migration scripts to handle large-scale data transitions during platform upgrades with minimal disruption.
- Collaborated with QA and DevOps teams to implement CI/CD pipelines for data workflows, ensuring smooth deployments.

47BILLION - SANTA CLARA, CA

Data Engineer

May 2016 - July 2018

- Created ETL jobs to consolidate data from SQL Server and MySQL into centralized storage for analytics teams.
- Wrote data validation routines and performed profiling to identify anomalies and improve data reliability.
- Automated reporting workflows by building Python scripts to generate recurring datasets and reports.
- Worked closely with stakeholders in agile environments to define requirements and deliver incremental data solutions.

PROJECTS

REVENUE CYCLE MANAGEMENT SYSTEM

Tech Stack: Python, PySpark, Azure Data Factory, MSSQL, Snowflake, GitHub

- Built a modular pipeline to process claims, eligibility data, and remittances, transforming them into curated data sets for analytics.
- Configured secure credential management with Azure Key Vault to meet compliance requirements.
- Implemented centralized logging and exception handling to improve pipeline observability and reduce troubleshooting time.
- Designed data partitioning and clustering strategies to optimize query performance for BI dashboards.
- Collaborated with compliance teams to ensure HIPAA and PHI data handling standards were maintained throughout the pipeline.

TESTHOUND MODERNIZATION

Tech Stack: Airflow, Azure Functions, Databricks, MySQL, GitHub Actions

- Led migration of legacy data flows into a scalable pipeline architecture using Databricks and Airflow.
- Refactored ingestion logic to support multi-tenant data sources and parallel execution for better performance.
- Developed REST endpoints for downstream teams to access processed datasets and metadata programmatically.
- Introduced data versioning and lineage tracking, enabling traceability for audit and debugging purposes.
- Optimized storage layers by applying Delta Lake best practices to reduce duplication and improve cost efficiency.

EDUCATION

PUCIT

BS in Computer Science
