Senior Data Engineer

SUMMARY

Experienced and adaptable **Senior Data Engineer** with a strong background in **designing, building, and maintaining large-scale data solutions**. Skilled in developing data pipelines, integrating diverse data sources, and supporting analytics initiatives. Adept at working with modern **data engineering practices** to ensure reliable, secure, and scalable data flows, seeking to leverage expertise in data modeling, workflow automation, and collaborative team environments to contribute to **data-driven projects**.

PROFESSIONAL ACHIEVEMENTS

- **Evolutz Corp:** Contributed to the design and implementation of enterprise data pipelines, improving the consistency and reliability of downstream analytics.
- **gener8tor:** Supported the migration of legacy reporting systems to modern data platforms, enhancing the efficiency and accessibility of data for stakeholders.

WORK EXPERIENCE

Evolutz Corp

Chicago, IL

Senior Data Engineer

Oct 2020 – Present

- Designed and maintained data workflows, ensuring efficient movement of data between internal and external systems.
- Built scalable data ingestion processes to support both structured and unstructured sources.
- Developed secure access and governance practices for sensitive datasets, improving compliance and data integrity.
- Streamlined automation in deployment pipelines to enhance the reliability of scheduled data jobs.
- Collaborated with cross-functional teams to enable analytics and reporting capabilities across departments.
- Contributed to a modular data ecosystem by integrating multiple processing frameworks for ETL, real-time data feeds, and batch workflows.

gener8tor

Madison, WI

Data Engineer

Jun 2018 – Sep 2020

- Developed and optimized ETL processes, supporting business intelligence and analytics initiatives.
- Managed data storage and retrieval operations to ensure availability and accuracy for internal reporting.
- Assisted in migrating reporting solutions to more efficient data platforms, reducing maintenance overhead.
- Supported microservice-based integration for consuming and delivering data across distributed systems.
- Collaborated with analysts and business teams to align data models with reporting requirements, ensuring clarity and usability.
- Participated in data quality initiatives by creating validation checks and monitoring processes to maintain accuracy across systems.

SKILLS & EXPERTISE

- **Data Engineering:** ETL/ELT processes, data pipelines, data modeling, workflow orchestration
- **Programming & Frameworks:** Python, SQL, shell scripting, distributed processing frameworks
- **Data Platforms:** Relational and non-relational databases, cloud-based storage systems, data warehouses/lakes
- **DevOps & Automation:** CI/CD, version control, workflow automation, containerization
- **Tools & Practices:** Caching, messaging queues, API integrations, monitoring solutions, Agile methodologies

EDUCATION

UNIVERSITY OF ENGINEERING AND TECHNOLOGY

Bachelor's in Computer Science
