

Results-driven Senior Data Engineer with hands-on experience designing, building, and maintaining scalable data platforms and pipelines. Skilled in developing efficient ETL/ELT workflows, integrating disparate data sources, and supporting analytics and reporting needs for enterprise environments. Proficient in cloud-native data engineering solutions, data modeling, and orchestration tools. Collaborative team player who partners with stakeholders to deliver reliable, well-structured data systems aligned with business objectives.

TECHNICAL SKILLS

- **Languages & Tools:** Python, SQL, PySpark, Scala, Bash
- **Data Engineering & Cloud:** Azure Data Factory, Azure Synapse, Databricks, Delta Lake, Snowflake, AWS Glue, Lambda
- **Orchestration & Workflow:** Apache Airflow, Azure Data Factory Pipelines
- **Databases:** MSSQL, PostgreSQL, Cosmos DB, Redis
- **Data Technologies:** Kafka, RabbitMQ, Spark Streaming, REST/GraphQL APIs
- **Version Control & CI/CD:** Git, GitHub Actions, Bitbucket Pipelines, CircleCI
- **Collaboration & Tracking:** JIRA, Trello, Monday.com

WORK EXPERIENCE

FlexTrades - Hudson, WI - Senior Data Engineer

06/2021 - Present

- Designed and implemented data pipelines to ingest, transform, and deliver datasets from APIs, flat files, and event streams into centralized data lakes and warehouses.
- Built and optimized scalable batch and streaming workflows using Azure Data Factory, Databricks, and Spark to support analytics and reporting.
- Developed reusable data models and curated datasets to ensure consistency and accuracy across business intelligence teams.
- Collaborated with DevOps teams to automate pipeline deployments using CI/CD workflows, ensuring smooth releases.
- Documented data flows, transformations, and schema definitions to maintain clarity and knowledge continuity across teams.
- Supported data quality initiatives by implementing validation checks and monitoring solutions to proactively detect anomalies.
- Partnered with cross-functional teams in Agile ceremonies to prioritize and deliver high-impact data engineering initiatives.

Verigent - Huntersville, NC - Data Engineer

03/2017 - 05/2021

- Built and maintained ETL processes to move data between transactional systems and reporting platforms.
- Developed SQL stored procedures and optimized queries to improve performance of data-intensive applications.
- Assisted in migrating legacy data pipelines to cloud-based environments, reducing maintenance overhead and improving scalability.
- Integrated multiple data sources into unified reporting datasets, supporting internal dashboards and KPIs.
- Collaborated with software engineers to ensure seamless data availability for front-end applications and APIs.

PROFESSIONAL ACHIEVEMENTS

- Strengthened a financial analytics platform by tuning SQL transformations, introducing targeted caching, and refactoring data models, resulting in faster, more dependable refresh cycles for stakeholders.
- Led globalization of the data layer for a large retail merchant by standardizing multi-currency handling, exchange-rate application, and locale-aware dimensions, enabling consistent cross-region reporting and smoother downstream application behavior.

EDUCATION

- Bachelor's in Computer Sciences from FAST (NUCES)
