

LIKHITHA GUTTAPALLI

Power BI Developer / Azure BI Developer

(857) 204-7868 | guttapallilikhitha@gmail.com | Charlotte, NC

PROFESSIONAL SUMMARY

- Power BI Developer and Azure BI Engineer with 2+ years of experience designing, developing, and deploying enterprise-grade business intelligence solutions at Siemens Technology, supporting finance, operations, and engineering teams across global business units.
- Skilled in building interactive Power BI dashboards, complex DAX measures, star/snowflake data models, and automated ETL pipelines using Azure Data Factory, Azure Synapse Analytics, and Microsoft Fabric Lakehouse architecture.
- Experienced in Power BI Service administration including workspace governance, row-level security (RLS), deployment pipelines, paginated reports (Report Builder), scheduled refreshes, and Power Automate-driven alert workflows.
- Proficient in T-SQL query optimization, Azure SQL Database, Snowflake, and Python (Pandas, NumPy) for data validation, anomaly detection, and supplemental analytics within the BI ecosystem.
- MS in Data Analytics Engineering from Northeastern University with a strong foundation in statistical modeling, data warehousing, and cloud-based analytics architecture.

TECHNICAL SKILLS

BI & Visualization	Power BI Desktop, Power BI Service, Power BI Gateway, Power BI Report Builder (Paginated Reports), DAX Studio, Tabular Editor, SSRS, Data Storytelling, Dashboard Performance Tuning
DAX & Power Query	Advanced DAX (CALCULATE, FILTER, Context Transition, Time Intelligence, Virtual Tables), Power Query M Language, Calculated Columns, KPI Measures, Variance Analysis
Cloud & Data Platform	Microsoft Azure (Data Factory, Synapse Analytics, SQL Database, Data Lake Gen2, Blob Storage, Logic Apps), Microsoft Fabric (Lakehouse, Data Factory, Data Activator), Azure DevOps
SQL & Databases	T-SQL (Advanced), SQL Server 2019, Azure SQL Database, Azure Synapse, Snowflake, Stored Procedures, Views, CTEs, Window Functions, Indexing, Query Tuning
ETL & Integration	Azure Data Factory (ADF), SSIS, Microsoft Fabric Data Factory, Power Automate, Incremental Data Loading, SAP/CRM Data Ingestion, REST API Connectors
Data Modeling	Star Schema, Snowflake Schema, Dimensional Modeling, Fact/Dimension Tables, Composite Models, DirectQuery, Import Mode, Aggregations, Data Marts
Programming	Python (Pandas, NumPy, Matplotlib, Seaborn), T-SQL, PowerShell, Statistical Analysis, Forecasting, Data Profiling
Governance & Security	Row-Level Security (RLS), Workspace Management, Data Lineage, Sensitivity Labels, Power BI Admin Portal, SOX & GDPR Compliance, Audit Trail, Metadata Management
Tools & Methods	JIRA, Confluence, Git, Azure Repos, CI/CD Pipelines, Agile/Scrum, Sprint Planning, MS Visio, Advanced Excel (Power Pivot, Macros)

PROFESSIONAL EXPERIENCE

Power BI Developer / Azure BI Developer

January 2022 - December 2023

Siemens Technology | Bangalore, India

Project 2: Enterprise Financial Planning & Cost Analytics Platform

July 2023 - December 2023

Led the design and delivery of a Power BI-based financial planning and cost analytics platform for Siemens' Global Finance division. Built executive dashboards covering project cost tracking, budget variance analysis, and departmental spend allocation across 5 business units in APAC and Europe. Integrated data from SAP FICO, Azure Synapse, and Microsoft Fabric Lakehouse into a unified reporting layer.

- Designed and delivered 8 Power BI dashboards for the CFO's office covering project cost tracking, budget vs. actual variance, departmental spend allocation, and capital expenditure forecasting across 5 global business units, replacing 12 legacy Excel-based reports.
- Architected a star schema data model in Azure Synapse Analytics connecting SAP FICO extracts, project management data, and HR cost center hierarchies, reducing report query time from 45 seconds to under 8 seconds for datasets exceeding 15M+ rows.

- Built advanced DAX measures for financial KPIs including YTD spend vs. budget variance, rolling 6-month cost trends, project margin calculations, and earned value analysis using CALCULATE, DATEADD, TOTALYTD, and SWITCH functions.
- Integrated Microsoft Fabric Lakehouse as the staging and transformation layer for SAP data ingestion, implementing incremental data loading patterns that reduced daily refresh time from 90 minutes to 22 minutes.
- Developed Power BI Paginated Reports using Report Builder for monthly financial close packages requiring fixed-format, export-ready layouts distributed to 80+ finance stakeholders across APAC and Europe.
- Implemented dynamic row-level security (RLS) across 4 workspaces to enforce data access by business unit, cost center, and management hierarchy, ensuring SOX compliance for financial reporting.
- Automated month-end reporting workflows using Power Automate to trigger dashboard refreshes, email distribution of paginated reports, and threshold-based alerts for budget overruns exceeding 10%.

Project 1: Operations Performance & Project Delivery Analytics

January 2022 - June 2023

Supported the development and deployment of Power BI dashboards for Siemens' Engineering and Operations teams, tracking project delivery milestones, resource utilization, and operational efficiency metrics across manufacturing and infrastructure project portfolios. Worked under the guidance of senior BI architects to build data pipelines, create data models, and deliver self-service analytics capabilities.

- Developed 6 Power BI dashboards tracking project delivery milestones, resource utilization rates, engineering change order volumes, and operational throughput KPIs for 3 Siemens engineering divisions, enabling weekly performance reviews that previously relied on manual spreadsheet compilation.
- Built ETL pipelines in Azure Data Factory (ADF) to extract, transform, and load data from SAP PM (Plant Maintenance), CRM, and project management systems into Azure SQL Database, automating data ingestion for 8 source tables with error handling and logging.
- Created Power Query (M) transformations to cleanse and standardize project milestone data, resource allocation records, and equipment utilization logs from inconsistent source formats, reducing data preparation time by 60% for the reporting team.
- Authored DAX measures for operational KPIs including on-time delivery rate, schedule performance index (SPI), cost performance index (CPI), resource utilization percentage, and backlog aging analysis using CALCULATE, SUMX, and AVERAGEX functions.
- Designed snowflake schema data models in Azure SQL Database linking project, resource, equipment, and cost center dimension tables to operational fact tables, ensuring consistent reporting definitions across engineering and operations teams.
- Conducted UAT with 15+ business users from engineering and operations, validating dashboard accuracy against source system reports, resolving 20+ data discrepancy findings, and achieving 98% user acceptance at go-live.
- Authored data dictionaries, dashboard technical specifications, and Power BI report documentation to support BI governance, audit readiness, and knowledge transfer for ongoing maintenance.

EDUCATION

Master of Science in Data Analytics Engineering

Northeastern University, Boston, MA

Bachelor of Engineering in Computer Science

BMS Institute of Technology & Management, Bangalore, India
