New York, NY 10012

Summary

Senior data engineer with 12+ years of experience designing and delivering modern analytics platforms on Azure using Data Factory, ADLS, Azure Databricks, Spark, Synapse Analytics, Azure SQL Database, and Fabric. Proven track record at MongoDB, Lyft, and Microsoft building metadata-driven pipelines, dimensional models, and secure lakehouse architectures that improve data quality, reliability, and time-to-insight. Expert in advanced SQL, API ingestion with OAuth 2, JSON normalization, and combining data lakes and warehouses into scalable, governed data platforms. Known for leading cross-functional teams, mentoring engineers, and driving adoption of best practices through clear documentation, workshops, and hands-on client engagement.

Experience

MongoDB

Senior Data Engineer

Jun 2023 – Present

- Led design of an Azure-based analytics lakehouse using ADLS, Synapse, and Fabric to centralize MongoDB Atlas telemetry and customer usage data for global stakeholders.
- Implemented metadata-driven pipelines in Azure Data Factory and Databricks, reducing new source onboarding time by 60% while improving observability and error handling.
- Designed and optimized complex star schemas and dimensional models in Azure SQL Database and Synapse dedicated pools to support self-service BI and operational reporting.
- Built scalable Spark and PySpark jobs in Azure Databricks to process high-volume JSON documents from MongoDB into normalized, analytics-ready Delta Lake tables.
- Developed robust API ingestion frameworks using REST, OAuth 2, and managed identities to securely integrate partner telemetry and billing systems into the analytics platform.
- Standardized JSON flattening and normalization patterns to map nested MongoDB documents into relational structures, improving query performance and data discoverability.
- Collaborated with product analytics, finance, and sales operations teams to translate business requirements into data models and SLAs aligned with MongoDB's SaaS business.
- Introduced data quality monitoring, automated validation checks, and alerting using Fabric and Azure Monitor, significantly reducing downstream data incidents for analytics users.
- Partnered with security and compliance teams to implement fine-grained RBAC, encryption, and data masking policies across ADLS, Synapse, and Databricks workspaces.
- Mentored junior data engineers on Azure, Spark, and dimensional modeling best practices, running weekly design reviews and code walkthroughs focused on production readiness.
- Championed documentation standards with architecture diagrams, lineage views, and runbooks, improving onboarding speed and cross-team understanding of data flows.
- Led migration of legacy on-prem SQL Server ETL to cloud-native Azure Data Factory and Databricks pipelines, lowering infrastructure costs while increasing reliability.
- Worked closely with MongoDB field teams to showcase analytics solutions for enterprise customers, demonstrating how Atlas data could power modern Azure-based insights.

Lyft

Senior Software Engineer, Data
Feb 2021

Dec 2019 –

- Architected Azure and Spark-based data pipelines to aggregate high-velocity ride, pricing, and driver telemetry, enabling near-real-time analytics for Lyft operations teams.
- Designed dimensional models and star schemas for trip, rider, and driver domains, supporting finance, growth, and marketplace analytics with consistent, trusted metrics.
- Implemented metadata-driven orchestration patterns using Azure Data Factory and Databricks, standardizing ingestion, transformation, and load logic across data products.
- Built scalable PySpark jobs to process streaming and batch data from mobile apps and services, optimizing partitioning and caching for performance and cost efficiency.
- Integrated REST APIs secured with OAuth 2 to ingest partner data such as mapping, payments, and marketing events, normalizing JSON payloads into curated SQL structures.
- Collaborated with data science, product, and operations teams to define SLAs, data contracts, and lineage, ensuring Lyft's analytics platform met evolving business needs.
- Developed reusable templates and libraries for data quality checks, schema validation, and anomaly detection, improving trust in critical marketplace dashboards.
- Partnered with cloud infrastructure teams to harden data security, implementing network isolation, encryption, and role-based access controls across Azure data services.
- Led design sessions and internal workshops on dimensional modeling, lakehouse patterns, and Azure Databricks best practices, upskilling engineers and analysts at Lyft.
- Owned end-to-end delivery of several cross-functional data initiatives, coordinating planning, execution, and stakeholder communication for on-time, in-scope releases.
- Introduced CI/CD practices for data pipelines with automated testing and deployment, reducing manual errors and accelerating iteration on analytics features.
- Worked with finance and compliance stakeholders to ensure ride and payment data pipelines met regulatory requirements while remaining performant and maintainable.
- Provided technical mentorship to data engineers and software engineers, reviewing designs and code with a focus on scalability, observability, and maintainability.
- Documented end-to-end architecture, data flows, and operational runbooks for critical pipelines, improving incident response and knowledge sharing across teams.
- Collaborated with Lyft's marketplace and pricing teams to experiment with new data features, enabling faster iteration on algorithms that improved rider and driver experiences.

Microsoft

Software Engineer - Backend/Cloud Services
Aug 2017 – Nov 2019

- Developed backend services on Azure for internal telemetry and licensing platforms, focusing on reliability, scalability, and secure data handling for Microsoft products.
- Implemented ETL processes using SQL Server, T-SQL, and early Azure data services to consolidate product usage data into centralized warehouses for reporting teams.
- Collaborated with program managers and analysts to design relational schemas and dimensional models that supported key KPIs for Office and Windows business units.
- Built RESTful integration services to ingest JSON-based telemetry from distributed clients, applying normalization logic to support downstream SQL and reporting needs.

- Worked closely with Azure engineering teams to adopt emerging cloud capabilities, contributing feedback that improved data platform reliability and developer experience.
- Participated in cross-team design reviews, sharing best practices on data modeling, API design, and secure service-to-service communication within Microsoft's ecosystem.
- Created detailed technical documentation, sequence diagrams, and deployment guides that streamlined handoffs to operations teams and reduced production support overhead.

Education

Virginia Tech

Bachelor of Science (B.S.), Computer Science, Mathematics, 2013 – 2017

Skills

- ✓ **Programming Languages:** SQL, Python, Scala, T-SQL, PySpark, DAX, JavaScript
- ✓ **Data Engineering Processing:** Data Engineering, ETL/ELT Pipelines, Metadata-driven Orchestration, Dimensional Modeling, Star Schema Design, Data Warehousing, Data Lakehouse Architectures
- ✓ **Azure Data Analytics:** Azure Data Factory, Azure Data Lake Storage (ADLS), Azure Databricks, Apache Spark, Azure Synapse Analytics, Azure SQL Database, Microsoft Fabric
- ✓ **Databases Storage:** SQL Server, Cosmos DB, PostgreSQL, Delta Lake, Data Lakes, Data Warehouses, Columnar Storage
- ✓ **Cloud Security Architecture:** Azure Architecture, Data Security Architecture, Role-Based Access Control (RBAC), Managed Identities, Networking for Data Platforms, Encryption at Rest and In Transit, Monitoring and Alerting
- ✓ **Integration APIs:** REST APIs, OAuth 2, JSON Standardization and Flattening, Event-Driven Ingestion, Real-time and Near-real-time Data, Message Queues, Change Data Capture (CDC)
- ✓ **Tools, Practices Leadership:** Git, CI/CD for Data Pipelines, dbt, Agile Delivery, Technical Leadership, Stakeholder Management, Workshops and Training Facilitation
