

SUMMARY

Data Engineer with over 5+ years of hands-on experience delivering batch data pipelines, analytical datasets, and reporting solutions for finance, insurance and automotive domains. Strong expertise in Python and SQL for large-scale data transformation, validation, and reconciliation across cloud and relational platforms. Experienced in AWS-based ingestion, PostgreSQL optimization, and Power BI reporting supporting operational and executive users. Proven ability to work within regulated US enterprise environments, partnering with governance teams to deliver audit-ready, reliable data solutions that support business-critical decision making.

TECHNICAL SKILLS

Data Engineering & ETL Development: Python-based Batch ETL Pipelines, Data Ingestion Workflows, Incremental Load Processing, Data Transformation Scripts, Data Reconciliation Queries, Data Quality Validation Frameworks, Schema Change Handling, Production Job Monitoring, Logging and Error Handling
Programming & Querying: Python, Pandas, NumPy, SQL, File Processing, Automation Scripts, Pyspark
Cloud & Data Platform: AWS S3 (Data Lake Storage, Partitioning, Lifecycle Management), AWS Lambda (Scheduled Batch Processing), AWS EC2 (ETL Compute Workloads), AWS Athena (Querying S3 Datasets), Amazon Redshift (Analytical Query Optimization)
Databases: PostgreSQL (Performance Tuning, Indexing, Query Optimization), SQL Server, MySQL, Relational Database Design, SparkSQL
Data Modeling & Warehousing: Fact & Dimension Tables, Star Schema Implementation, Analytical Dataset Creation, Data Reconciliation between Source & Target Systems
Analytics & BI: Power BI, Tableau, Operational Reporting, Executive Reporting, Ad-hoc Analysis
Enterprise Tools & Practices: Git Version Control, JIRA, Confluence, Agile Sprint Delivery, Data Lineage Documentation, Audit Support
Domain Expertise: Insurance Data (Claims, Policy, Premium, Loss Ratio), Automotive Data (Sales, Service, Manufacturing KPIs)
Additional Technical Skills: R, C, Advanced Excel (Pivot Tables, Lookups, Data Validation)

EXPERIENCE

- Data Engineer | AIG | USA

Jun2025 – Present

 - Datasets enabling accurate financial and actuarial analytics while ensuring data consistency, traceability, and audit readiness across regulated insurance reporting environments.
 - Built AWS-based ingestion workflows leveraging S3 and Lambda for scheduled batch processing, handling more than 25 million records per reporting cycle and reducing downstream data availability delays for analytics and reporting users by approximately 30 percent.
 - Developed and maintained analytical and dimensional data models within PostgreSQL environments, implementing reconciliation queries and multi-stage validation rules that reduced recurring data defects reported by business stakeholders by over 20 percent.
 - Created and optimized Power BI dashboards supporting underwriting, risk, and finance teams by modeling datasets tracking premiums, claims volume, and loss ratios, enabling faster operational insights and reducing reliance on manual reporting processes.
 - Partnered closely with governance and compliance teams to document data lineage, transformations, and business logic using Confluence, supporting audit readiness, standardized reporting practices, and regulatory compliance across enterprise analytics platforms.
 - Optimized complex SQL queries supporting recurring analytical workloads by refactoring joins, filters, and indexing strategies, reducing average query execution times from minutes to seconds on large production datasets.
- Data Engineer | Cognizant | India

Feb2020 – Jul 2023

 - Worked as a Data Engineer at Cognizant on client assignment with Toyota Motor North America (TMNA), contributing to Toyota Big Data Platform (TBDP) initiatives while designing and maintaining large-scale batch ETL pipelines using Python and SQL.
 - Engineered data ingestion workflows integrating APIs, flat files, relational databases, third-party vendors such as Acxiom, and internal CRM platforms including Salesforce C2AP, creating a unified, analytics-ready data foundation for downstream reporting and insights.
 - Led on-premise to AWS cloud migration initiatives, organizing datasets within AWS S3 data lakes, implementing access controls and security requirements, and improving scalability, reliability, and performance of enterprise batch processing workloads.
 - Developed and optimized analytical data models, including normalized and denormalized schemas and fact and dimension tables, aligned with business reporting requirements and optimized for Power BI consumption and downstream analytical workloads.
 - Implemented automated data quality, validation, and reconciliation frameworks within ETL pipelines, monitoring accuracy, completeness, schema changes, and consistency to proactively prevent reporting issues and maintain enterprise data integrity.
 - Owned data reconciliation processes using SQL and Python to validate millions of records daily between source systems and cloud platforms, consistently maintaining data accuracy rates above 99 percent for critical business reporting use cases.
 - Built and maintained Power BI dashboards and automated data quality reports, reducing data discrepancies by approximately 15 percent and improving visibility into data health for business, analytics, and technical stakeholders.
 - Optimized analytical query performance by tuning SQL workloads, improving data partitioning strategies, and refining storage layouts across AWS S3, Athena, Redshift, and PostgreSQL environments, reducing query execution times by up to 30 percent.
 - Contributed to enterprise analytics initiatives including Toyota Big Data Platform projects, MTM, NPPS, and service analytics solutions, integrating batch and near-real-time datasets to support operational monitoring and business intelligence.
 - Collaborated with cross-functional teams to translate business requirements into technical specifications, define data mappings, document lineage, and deliver audit-ready datasets within regulated enterprise and client-facing environments.
- Analytics Engineer | Adons Softech | India

May2019 – Jan 2020

 - Analyzed operational, sales, and finance datasets using SQL and Excel to support recurring weekly and monthly reporting cycles, enabling management to track performance metrics and make informed operational and strategic decisions.
 - Developed ad-hoc and scheduled reports by extracting, joining, and aggregating data from multiple relational database systems, reducing manual reporting effort while improving consistency and accuracy of business-critical metrics.
 - Cleaned, standardized, and prepared raw datasets prior to analysis, addressing missing values, inconsistent formats, and data anomalies to improve data quality and confidence in reported insights.
 - Built and maintained Power BI dashboards visualizing KPIs such as revenue trends and customer activity, enabling self-service analytics for business users without recurring analyst involvement.
 - Supported data validation and reconciliation activities by cross-checking reports against source systems and historical data, reducing discrepancies identified during internal reviews and audits.
 - Documented reporting logic, metric definitions, and assumptions, maintaining reference documentation to support onboarding, knowledge transfer, and long-term sustainability of analytics workflows.

PROJECTS

- Automotive Sales & Service Analytics Pipeline

 - Designed and implemented a Python- and SQL-based batch data pipeline to ingest automotive sales, service, and warranty datasets from multiple source systems, performing validation, aggregation, and reconciliation to support operational and executive reporting.
- Insurance Claims Analytics Pipeline

 - Built batch data pipelines using Python and SQL to process large-scale insurance claims datasets, applying validation, reconciliation, and aggregation logic to support actuarial analysis and regulatory reporting.

EDUCATION

Master in Information Technology | Illinois Institute of Technology, USA

MAY 2025

Bachelor in Electronics and communication Engineering | Sree Venkateswara college of Engineering, India

APR 2019
