

# Steven Phillips

470-713-8388 | steven.phillips.pub@gmail.com | Atlanta, GA, 30315

Senior Data Engineer with 10+ years of experience architecting enterprise-scale data solutions within Microsoft Azure and cloud ecosystems. Proven expertise in building robust data pipelines, dimensional modeling, and orchestrating complex ETL workflows using Azure Data Factory, Databricks, and Synapse Analytics. Demonstrated success leading cross-functional teams to deliver scalable data architectures that drive measurable business outcomes and accelerate analytics adoption across diverse client environments.

## EDUCATION

University of Texas at Austin

Bachelor of Science in Computer Science

2014

## PROFESSIONAL EXPERIENCE

Monte Carlo

Sep 2022 – Present

Senior Data Engineer

San Francisco, CA

- Architected and implemented enterprise data lakehouse solutions using Azure Databricks, Data Factory, and Synapse Analytics, processing billions of events daily with automated orchestration and metadata-driven pipelines
- Designed dimensional data models and star schemas for analytics platforms, integrating Snowflake, Azure SQL Database, and ADLS to support real-time business intelligence dashboards
- Built comprehensive data orchestration frameworks leveraging metadata-driven techniques and Azure Data Factory, reducing pipeline development time by 40% while ensuring scalability and modularity
- Developed API integration patterns using OAuth 2 authentication and JSON standardization, enabling seamless data ingestion from diverse external sources into structured SQL formats
- Implemented advanced data quality and reliability monitoring using automated validation, notification systems, and anomaly detection to maintain 99.9% data accuracy SLAs
- Led technical design sessions and workshops with client teams, translating complex business requirements into robust data architecture solutions aligned with Microsoft best practices
- Mentored data engineering teams on modern lakehouse architectures, establishing repeatable patterns and governance frameworks that improved project delivery consistency
- Collaborated with business intelligence developers and Azure administrators to deliver comprehensive analytics solutions, resulting in improved decision-making capabilities for enterprise clients
- Championed documentation standards and architectural diagramming practices, creating detailed technical specifications that enhanced knowledge transfer and solution maintainability

Epiq

May 2019 – Aug 2022

Senior Software Engineer

New York, NY

- Led migration of legacy data systems to Azure-based architectures using Databricks, Spark, and Azure SQL Database, modernizing analytics capabilities while maintaining regulatory compliance requirements
- Engineered complex dimensional models and data warehouse solutions supporting large-scale document processing and legal discovery workflows with advanced SQL optimization techniques
- Developed metadata-driven ETL pipelines using Azure Data Factory and custom orchestration logic, automating data transformations and improving processing reliability by 35%
- Implemented API-based data ingestion workflows with OAuth 2 security protocols, standardizing JSON data structures and enabling seamless integration with compliance systems
- Built comprehensive data quality frameworks incorporating automated validation rules, exception handling, and notification systems to ensure regulatory audit readiness
- Designed scalable data lake architectures on Azure Data Lake Storage, combining structured and semi-structured data sources to support advanced analytics and reporting requirements
- Collaborated with cross-functional teams including business analysts and compliance specialists to architect data solutions that directly improved case processing efficiency and client outcomes
- Established CI/CD pipelines for data engineering workflows, implementing automated testing and deployment practices that reduced manual errors and accelerated release cycles
- Created detailed technical documentation and data lineage mapping, ensuring transparent data governance and facilitating seamless knowledge transfer across project teams

Amazon

Sep 2016 – Mar 2019

Software Engineer

Seattle, WA

- Developed and optimized data processing workflows using Azure technologies and SQL-based transformations, supporting high-volume product catalog and fulfillment analytics systems
- Implemented dimensional modeling techniques for business intelligence platforms, creating star schema designs that improved query performance and enabled self-service analytics capabilities
- Built automated ETL pipelines integrating multiple data sources including APIs and relational databases, establishing reliable data flows that supported real-time business decision making
- Designed metadata-driven orchestration patterns using workflow automation tools, reducing manual intervention and improving data pipeline reliability across distributed systems
- Collaborated with analytics teams to implement data quality monitoring and validation frameworks, ensuring consistent data accuracy and establishing automated exception handling processes
- Contributed to Azure cloud migration initiatives, gaining hands-on experience with Data Factory, Azure SQL Database, and modern data architecture patterns
- Participated in technical design sessions and cross-functional planning meetings, translating business requirements into scalable data engineering solutions
- Supported implementation of CI/CD practices for data workflows, contributing to automated testing and deployment processes that enhanced overall system reliability

MyEdu

Aug 2014 – Aug 2016

Software Engineer

Austin, TX

- Contributed to development of data processing systems using SQL and Python-based ETL workflows, gaining foundational experience in dimensional modeling and data warehouse design principles
- Assisted senior engineers in building API integration patterns and JSON data standardization processes, learning best practices for metadata-driven data ingestion and transformation
- Supported implementation of relational database solutions using SQL optimization techniques, contributing to improved query performance and data retrieval efficiency
- Participated in Azure cloud platform learning initiatives, gaining exposure to modern data engineering tools and practices including basic pipeline orchestration concepts
- Collaborated with cross-functional development teams on data integration projects, contributing to requirements gathering and technical specification documentation
- Helped implement automated testing frameworks for data workflows, learning CI/CD practices and quality assurance methodologies that shaped foundational engineering skills
- Contributed to technical documentation efforts and participated in knowledge sharing sessions, developing strong communication skills and understanding of data architecture principles

---

## SKILLS

**Azure Data Technologies:** Azure Data Factory, Azure Databricks, Synapse Analytics, Azure SQL Database, ADLS, Azure Fabric

**Programming and Databases:** Python, SQL, Spark, PostgreSQL, Snowflake, JSON Processing, API Integration

**Data Engineering Tools:** Apache Airflow, ETL Orchestration, Dimensional Modeling, Star Schema, Data Quality Frameworks

**Cloud and DevOps:** Azure Cloud Platform, Docker, Kubernetes, Terraform, CI/CD Pipelines, OAuth 2

**Analytics and Reporting:** Power BI, Business Intelligence, Data Warehousing, Metadata Management, Data Lineage

**Development Practices:** GitHub Actions, Infrastructure as Code, Automated Testing, Technical Documentation, Agile Methodologies

---

## CERTIFICATION

AWS Certified Machine Learning - Specialty

AWS Certified Solutions Architect - Associate

Azure Developer Associate (AZ-204)
