SUMMARY

Data Engineer with 3+ years of experience designing and building scalable data pipelines and modern cloud-based data platforms. Experienced in developing robust ETL/ELT workflows, integrating data from multiple enterprise systems, and transforming raw datasets into structured, analytics-ready data models. Strong hands-on experience with Python, SQL, Spark, and Airflow for building reliable data processing and orchestration pipelines. Skilled in distributed data processing using PySpark, Kafka, and Hadoop, along with implementing data integration workflows using REST APIs, JSON, and cloud storage systems. Experienced working with modern data warehouses such as Snowflake, BigQuery, and Redshift, and deploying pipelines across AWS, GCP, and Azure environments. Proficient in using Git and CI/CD workflows to maintain scalable, well-governed data platforms that support analytics, reporting, and data-driven decision making.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, Java, Scala
- **Data Modelling & Architecture:** Dimensional modeling, star and snowflake schema design, data marts
- **ETL/ELT Development:** Building and optimizing data pipelines using Airflow, dbt, Informatica
- **Data Warehousing:** Snowflake, BigQuery, Redshift, SQL Server, PostgreSQL
- **Big Data Frameworks:** Spark, Hadoop, Kafka, Hive
- **Cloud Platforms:** AWS, GCP, Azure
- **Version Control & CI/CD:** Git, Jenkins, CI/CD workflows
- **Data Integration:** RESTful APIs, JSON, XML
- **Data Governance & Quality:** Data validation, monitoring, and compliance
- **Analytics & BI Tools:** Power BI, Tableau
- **Databases:** SQL, DynamoDB, Cassandra
- **Soft Skills:** Problem-solving, communication, teamwork, adaptability

PROFESSIONAL EXPERIENCE

DXC Technology

Aug 2025 – Present

Data Engineer

- Spearheaded the design and implementation of scalable data pipelines for the Enterprise Data Modernization and Real-Time Analytics project, using PySpark and Apache Kafka to ingest and process high-volume enterprise datasets for operational reporting.
- Built and optimized ELT workflows using dbt and Apache Airflow to transform raw cloud data into structured analytical models within Snowflake, improving data processing efficiency by 30%.
- Integrated multi-source datasets from REST APIs, enterprise applications, and cloud storage using JSON-based ingestion frameworks on AWS S3 and AWS Glue to support centralized data platforms.
- Implemented automated data quality checks and monitoring using Great Expectations and CI/CD pipelines with GitHub Actions, reducing pipeline failures and improving data reliability by 20%.

Trigent

Oct 2020 – Jul 2023

Data Engineer

- Designed data ingestion workflows using Python and SQL as part of the Cloud Data Ingestion and Analytics Platform to integrate application and operational datasets.
- Developed ETL workflows using Apache Airflow to schedule data extraction and transformation tasks, enabling consistent data movement from operational systems into the data warehouse.
- Implemented structured data modeling techniques including star schema and dimensional tables to organize raw datasets for reporting and analytical use cases.
- Built transformation models using dbt to clean, standardize, and prepare datasets for downstream analytics and reporting applications.
- Managed data storage and query optimization within Snowflake and PostgreSQL, improving query response time by 20% through indexing and partition strategies.
- Integrated data from external services using REST APIs and JSON parsing, enabling automated ingestion of third-party datasets into internal pipelines.
- Created data validation checks and monitoring scripts to maintain data quality and pipeline reliability, reducing recurring data inconsistencies by 15%.
- Developed interactive Power BI dashboards to support operational analytics and business reporting, improving data accessibility for stakeholders by 25%.
- Utilized Git version control and CI/CD workflows to manage pipeline code, ensuring consistent deployments and collaborative development practices.

PROJECTS

Customer Support Ticket Data Processing System

- Developed scalable data transformation scripts using Python, Pandas, and data preprocessing techniques to clean, normalize, and standardize large customer support ticket datasets for structured analytics.
- Implemented automated data ingestion workflows to extract and load semi-structured JSON and CSV datasets into a MySQL relational database, enabling efficient storage, querying, and downstream reporting.
- Conducted exploratory data analysis using advanced SQL queries, joins, and aggregations to identify ticket resolution patterns, service performance trends, and operational support insights.

Enterprise Data Integration and Pipeline Automation

- Engineered automated and scalable data pipelines using Apache Airflow to orchestrate data integration workflows across REST APIs, enterprise applications, and relational databases, enabling reliable enterprise data ingestion.
- Developed distributed data processing workflows using Apache Spark and PySpark to transform and process large-scale enterprise datasets, supporting high-performance analytics and downstream data warehouse operations.
- Implemented CI/CD automation pipelines using Git, Jenkins, and version control best practices to streamline deployment, monitoring, and maintenance of data engineering workflows.

EDUCATION

Master of Science in Management Information Systems

University of Houston | GPA: 3.46 / 4.0

Aug 2023 – May 2025
