

June Malik

Lead Data Engineer | Spark, Kafka, AWS | Building Scalable Data Platforms & Real-Time Pipelines
junemalik2086@gmail.com | +1 (856) 210-5890 | Voorhees, New Jersey, 08003, USA

Summary

Lead Data Engineer with 9+ years of experience designing and scaling high-performance data platforms across cloud and distributed environments. Proven expertise in building robust ETL/ELT pipelines, real-time streaming systems, and data lake architectures using Spark, Kafka, and modern cloud technologies (AWS, Azure, GCP). Adept at transforming complex data into actionable insights that drive business outcomes. Strong background in optimizing data workflows, improving system reliability, and enabling advanced analytics and machine learning use cases. Experienced in leading cross-functional teams, mentoring engineers, and delivering scalable, production-grade solutions. Passionate about solving complex data challenges, driving innovation, and aligning data strategy with business goals in fast-paced, enterprise environments. Consistently delivers measurable impact through scalable and efficient data solutions.

Skills

- **Data Engineering & Big Data:**
Apache Spark, Apache Kafka, Apache Flink, Hadoop, Distributed Data Processing
- **Programming & Querying:**
Python (Advanced), SQL (Advanced), PySpark, Shell Scripting
- **Cloud & Data Platforms:**
AWS (S3, EMR, Glue, Redshift, Lambda), Azure (Data Factory, Synapse), GCP (BigQuery)
- **Data Architecture & Modeling:**
Data Lakes, Data Warehousing, ETL/ELT Pipelines, Dimensional Modeling, Schema Design
- **Workflow Orchestration & Streaming:**
Apache Airflow, Real-Time Data Processing, Event-Driven Architectures
- **DevOps & Engineering Practices:**
CI/CD Pipelines, Docker, Git, Infrastructure as Code (Terraform), Agile/Scrum
- **Data Governance & Quality:**
Data Validation, Data Lineage, Monitoring, Security & Compliance
- **Leadership & Collaboration:**
Team Leadership, Stakeholder Management, Cross-functional Collaboration

Professional Experience

Lead Data Engineer

08/2022 - Present

Collabera

- Leading architecture and development of enterprise-scale data platforms across AWS, Azure, and GCP
- Designing end-to-end solutions including data lakes, warehouses, and real-time streaming pipelines
- Driving data strategy and aligning engineering solutions with business objectives
- Managing and mentoring a team of engineers; overseeing delivery and code quality
- Implementing CI/CD pipelines, data observability, and system reliability frameworks
- Leading cloud migration initiatives (on-prem → cloud), improving scalability and cost efficiency
- Partnering with stakeholders to enable AI/ML and advanced analytics solutions

Senior Data Engineer
NJFX

04-2018 – 07-2022

- Architected and deployed distributed data pipelines using Apache Spark, Kafka, and cloud (AWS/Azure)
- Built real-time streaming systems to process high-volume data with low latency
- Designed scalable data lake and warehouse architectures for enterprise analytics
- Improved pipeline efficiency, reducing processing time by up to 70%
- Implemented monitoring, logging, and data governance frameworks
- Mentored junior engineers and enforced best practices in scalable data engineering

Data Engineer II

12- 2016 – 03- 2018

InetSoft

- Designed and maintained data integration pipelines supporting BI dashboards and reporting systems
- Implemented workflow orchestration using Apache Airflow, improving pipeline automation and reliability
- Integrated APIs, databases, and external data sources into centralized data platforms
- Optimized transformations using Python and SQL, reducing processing latency
- Supported scalable data architecture for BI tools and real-time reporting

Data Engineer

10- 2014 – 11- 2016

Innodata

- Developed and maintained scalable ETL pipelines to process large-scale structured and unstructured datasets
- Built optimized data models and wrote complex SQL queries for analytics and reporting
- Improved data quality through validation frameworks and error-handling mechanisms
- Collaborated with analytics teams to support BI initiatives and data-driven decision-making
- Contributed to modernization of legacy data systems into scalable architectures

Education

Newark Institute of Technology

Bachelor's Degree in Computer Science
