

Sr. Data Engineer & Analytics Leader

I have spent the last 20+ years designing, building, and optimizing data pipelines, enterprise data warehouses, analytic platforms, and ETL processes across healthcare, e-commerce, and government. I have deep expertise in SQL, metadata-driven ETL frameworks, cloud data environments (Databricks, Azure), and operationalizing analytics solutions for enterprise clients.

Technical Skills

- SQL (T-SQL)
- Data Pipeline Development
- Data Warehousing Architecture
- Data Modeling
- Cloud Database Systems (Databricks)
- Data Validation & QA
- Performance Tuning
- Python
- C# / Java
- Javascript
- PowerShell
- Microsoft SQL Server
- SQL Server Integration Services
- Git
- Power BI
- R
- Distributed Systems
- High Availability
- API Integrations

Management Skills

- Product Management
- Customer Relations
- Project Management
- Quality Assurance
- Team Management
- Requirements Development
- Data Analysis
- Data Warehousing
- Business Intelligence
- Vendor Management
- Standards & Policy
- Mentoring

Experience

Principal/Owner - Tian Data Services

11/2025 - Present

- Worked with small and medium sized businesses to improve business processes through the pragmatic application of technology and process improvement methodologies.
- Contracted with a large healthcare analytics organization to create and manage new data ingestions using Python to read from APIs and load into Databricks using custom notebooks.
- Partnered with a small national association for rural healthcare to create and manage a cybersecurity program, including policy and program development.

VP of Technology - REDi Health Analytics

11/2021 - 11/2025

- Partnered with client technical leads to understand and assess their current systems in order to create solutions that met their strategic and tactical objectives.
- Created development and data engineering standards for toolsets and applications that support REDi's analytics teams.
- Served as a key advisor and administrative consultant for clients, developing data pipelines and API integrations across their organization.
- Managed and resolved production issues across distributed data services, coordinating cross-functional teams to ensure uptime and stability.

Analytics Director - Health Catalyst

10/2019 - 10/2021

- Mentored, trained, and managed analytic/data engineers in the implementation of client projects, including requirements definition, code development, and data validation.
- Provided hands-on support for production analytics systems, diagnosing performance bottlenecks and data pipeline issues across large client health systems.
- Worked with engineering and architecture teams to design robust, scalable analytic processes supporting mission-critical hospital operations.
- Performed custom implementations of analytic processes using the Health Catalyst analytics platform, SQL, R, and other data management tools, including Snowflake.

Dir. Development and Infrastructure - Traeger Grills

05/2018 - 10/2019

- Acted as lead architect for high-volume API and data integrations for order and shipment processing across multiple systems including ERP, CRM, eCommerce, and reporting.
- Served as HR manager for 7 developers (including 2 contractors) that made up the data integration and back end development team.
- Coordinated with the VP of Information Technology and other Directors to augment systems and processes, improving efficiencies in a rapidly growing and dynamic business.
- Created custom processes and data integrations using a range of toolsets including SSIS, Jitterbit, Python, PowerShell, C#, and T-SQL.

Sr. Director of Platform Operations - Health Catalyst

06/2017 - 05/2018

- Directed platform operations for large-scale cloud deployments supporting multiple hospital systems, ensuring high availability, reliability, and secure data flows.
- Managed and mentored data engineers and technical directors as direct reports in support of multiple healthcare clients spread across the United States.
- Worked in conjunction with other Sr. Directors to improve the process of designing and implementing analytics systems across health care providers ranging in size from small critical access hospitals to large multi-billion dollar hospital systems.
- Acted as a developer, creating custom extensions to the Health Catalyst platform using SSIS and T-SQL as well as generating custom analytic processes using programming languages like C#, PowerShell and some R.

Director of Database Administration - Health Catalyst

12/2014 – 06/2017

- Served as Operations Manager for day-to-day operations of the Health Catalyst Cloud Services product line, including client coordination, project management, and tier 2 and 3 support covering 40% of Health Catalyst's customer base representing health systems across the US.
- Advised the Vice President of IT, CTO and Senior Vice President of Product Development in crafting the strategic direction of Health Catalyst's Cloud Services product line.
- Served as one of the senior most technical leaders on the Health Catalyst Cloud Services team, responsible for the design, implementation, and maintenance of a large scale cloud systems delivering rapid deployment of Health Catalyst's proprietary data warehousing platform.
- Worked on the IT Leadership team to craft policies and procedures used to support the organization and to help Health Catalyst's Cloud Services group obtain and retain their SOC II Type 1 and SOC II Type 2 certifications.

Sr. Database Architect / Sr. DBA - Health Catalyst

01/2013 – 12/2014

- Acted as lead developer in creating the core ETL modules of the Health Catalyst Analytics Platform using SQL Server Integration Services to dynamically load tables based on client defined metadata.
- Performed the roles of backend developer and QA engineer on the development team building Health Catalyst's Subject Area Mart Designer (SAMD) which allows for the transformation of source data into workable summary data sets for analytic processing.
- Acted as technical expert on data warehousing and database development for Health Catalyst's development and client operations teams, including developing custom extensions to the Catalyst Analytic Platform and working directly with customers to implement Health Catalyst's on-premises solutions.
- Crafted policies and procedures using industry best practices for disaster recovery, data management, and data security for Health Catalyst internal operations and as recommendations for client implementation teams.
- Worked as a member of the architecture and implementation team charged with creating Health Catalyst's Cloud Services product line.

Education

Bachelor of Arts – *Chinese / Asian Studies / Linguistics* - University of Utah

- Vice Chair and Co-Chair Linguistics Student Advisory Committee
- Organizer of the 1st annual Student Conference in Linguistics

Master of Science – *Computer Science* - University of Bridgeport

- Published (IEEE): Investigation of Countermeasures to Anti-Forensics Methods
- Project: Proof of Concept for an Artificial Intelligence Semantic Metadata System

Certifications

ISC2 Certified in Cybersecurity – 12/2025

Microsoft Certified Solutions Associate – 05/2016

- SQL Server 2012/2014

Microsoft Certified Technology Specialist – 05/2013

- SQL Server 2008 Database Development and Administration

Health Catalyst Accelerated Practices Graduate – 01/2016

- Team: Hardware/Platform Improvement Team
- Project: Reducing Deployment Lead Time during New Customer On-boarding
