PROFESSIONAL SUMMARY

- Senior Data Engineer and Analytics Consultant with over 6+ years of experience architecting, delivering, and supporting enterprise-scale cloud data platforms for US healthcare and consulting clients across regulated environments.
 - Proven expertise building and operating high-volume batch, streaming, and near real-time data pipelines on AWS and Azure, owning production reliability, performance optimization, and SLA-driven delivery.
 - Strong background enabling analytics, reporting, and AI-driven insights through well-modelled, governed datasets supporting executive dashboards, operational analytics, and advanced analytical use cases.
 - Extensive experience leading production support, incident triage, root cause analysis, and permanent remediation for data pipelines, ensuring stability, audit readiness, and trusted analytics consumption.
 - Consulting-focused professional experienced in Agile delivery, daily client interaction, sprint execution, and translating complex business requirements into scalable, analytics-ready technical solutions.
-

CORE TECHNICAL SKILLS

Cloud Platforms: AWS, Microsoft Azure

Data Engineering: AWS Glue, Azure Data Factory, Apache Spark, PySpark

Data Warehousing: Amazon Redshift, Azure Synapse Analytics

Streaming & Messaging: Amazon Kinesis, Apache Kafka

Storage: Amazon S3, Azure Data Lake Storage Gen Two

Programming: Python, SQL

Analytics & BI: Power BI, DAX

AI & Advanced Analytics: Amazon SageMaker, Azure Machine Learning, Generative AI APIs

DevOps & IaC: Terraform, CI/CD Pipelines

Monitoring & Operations: CloudWatch, Azure Monitor

Agile & Delivery: Scrum, Jira

PROFESSIONAL EXPERIENCE

Molina Healthcare – Long Beach, CA

Senior Data Engineer / Analytics Engineer | Sep 2024 – Present

- Architect and operate enterprise-scale data pipelines ingesting over fifty million healthcare records monthly from clinical and operational systems into cloud platforms supporting population health and compliance analytics.
- Design and maintain near real-time ingestion pipelines using AWS Kinesis and Kafka, enabling low-latency analytics delivery for operational dashboards and downstream care management use cases.
- Build and optimize Redshift and Azure Synapse data models supporting analytics engineers and BI teams, significantly improving query performance, dashboard refresh stability, and executive reporting reliability.

- Implement robust data quality frameworks using Python and Spark, identifying hundreds of data anomalies monthly and supporting audit readiness, regulatory reporting, and trusted analytics consumption across stakeholders.
- Own end-to-end production support for critical data pipelines, leading incident triage, root cause analysis, and permanent remediation to stabilize ingestion, transformation, and analytics delivery layers.
- Develop Power BI datasets and DAX-based semantic models consumed by over two hundred business users, reducing manual reporting effort and accelerating organization-wide self-service analytics adoption.
- Integrate AI-enabled analytics using SageMaker and Azure Machine Learning to support predictive insights, anomaly detection, and operational trend analysis within governed healthcare datasets.
- Collaborate daily with product owners, analytics stakeholders, and compliance teams in Agile ceremonies to prioritize delivery, manage releases, and align data solutions with evolving business requirements.

Environment: AWS Glue, Redshift, S3, Kinesis, Kafka, Azure Data Factory, Azure Synapse, ADLS Gen Two, Python, PySpark, Power BI, DAX, SageMaker, Azure Machine Learning, Terraform, CI/CD, CloudWatch, Azure Monitor

Deloitte – Hyderabad, India

Data Engineer / Analytics Consultant | Aug 2021 – Jul 2023

- Delivered cloud-based analytics platforms for enterprise clients by designing scalable ingestion and transformation pipelines supporting financial, operational, and customer analytics initiatives.
- Engineered Spark and PySpark workflows processing tens of millions of records daily, improving data freshness and enabling near real-time reporting for leadership and business stakeholders.
- Designed and orchestrated Azure Data Factory pipelines managing complex data movement across source systems, data lakes, and analytics warehouses with strong operational resiliency.
- Implemented analytics-optimized data warehouse models in Redshift and Azure Synapse, improving query consistency, data discoverability, and downstream BI consumption.
- Supported production data operations through monitoring, alerting, incident resolution, and root cause analysis, ensuring reliable analytics delivery across multiple client environments.
- Enabled AI-driven analytics use cases by integrating Azure Machine Learning models into analytics pipelines supporting forecasting, classification, and advanced business insights.
- Partnered closely with client stakeholders, analysts, and leadership teams to translate business requirements into scalable technical designs aligned with consulting delivery timelines.
- Actively participated in Scrum ceremonies, sprint planning, and release coordination while maintaining detailed technical documentation and operational runbooks.

Environment: Azure Data Factory, Azure Synapse Analytics, ADLS Gen Two, AWS Glue, Redshift, Python, PySpark, Power BI, Azure Machine Learning, CI/CD, Azure Monitor, Jira

Kogentix – Hyderabad, India**Data Engineer | Jan 2018 – Jul 2021**

- Built foundational cloud data pipelines supporting analytics and reporting workloads for healthcare and enterprise clients across batch and incremental ingestion patterns.
- Developed Python and Spark-based ETL processes to cleanse, transform, and standardize structured datasets for downstream analytics consumption.
- Implemented scalable data storage strategies using Amazon S3 and Azure Data Lake, improving data organization, accessibility, and long-term platform scalability.
- Delivered analytics-ready datasets supporting Power BI reporting and ad hoc analytical exploration for business and operational teams.
- Supported production pipelines through monitoring, failure analysis, and issue resolution to maintain consistent data availability and reliability.
- Contributed to infrastructure automation using Terraform, standardizing cloud data platform deployments and reducing manual configuration overhead.
- Collaborated with senior engineers and business analysts to refine requirements and improve data reliability through iterative delivery cycles.
- Participated in Agile ceremonies while building hands-on expertise in enterprise data engineering best practices.

Environment: AWS S3, Azure Data Lake, Python, Spark, SQL, Power BI, Terraform, CI/CD, Agile Scrum

EDUCATION

Mater of Science in Business Analytics – Anderson University, SC, United States (GPA- 3.800)

CERTIFICATIONS

- Microsoft Azure Data Engineer Associate.
- AWS Certified Data Analytics – Specialty.
- Snowflake – The Complete Masterclass.
- SQL Beginner to Advanced For Data Professionals.
- Python: Beginner to Advanced For Data Professionals.
- Get Job Ready: Power BI Data Analytics for All Levels 2.0 | Codebasics.
- Excel: Mother of Business Intelligence course from Codebasics.
- Agile Fundamentals: Including Scrum & Kanban.
