---

## SUMMARY

Senior Data Engineer with 11+ years designing, building, and maintaining scalable data platforms. Expertise in data architecture, data pipelines (ETL/ELT), data warehouses and lakehouse concepts, and data orchestration. Proven track record of improving latency, reliability, and analytics enablement through modular, secure, and governed architectures. Strong leadership and collaboration across analytics, engineering, and business teams; adept at driving strategies, mentorship, and repeatable patterns that deliver measurable business value.

---

## SKILLS

### Programming

- Python, SQL, R

### Data Processing

- Spark, Airflow, Kafka, DBT

### Data Warehousing & Modeling

- Dimensional modeling, star schemas, Redshift, Snowflake, data lakehouse patterns

### Orchestration

- Metadata-driven pipelines, orchestration design, workflow scheduling

### Streaming

- Spark Streaming (where applicable), real-time data flows

### Cloud Platforms & DevOps

- AWS: EC2, S3, Lambda, Glue, Redshift; Terraform, Docker, Kubernetes
- Infrastructure as Code, CI/CD practices, governance and security in cloud data platforms

### Data Quality & Monitoring

- Data validation, data lineage, governance, monitoring dashboards

### BI & Analytics

- Power BI, Looker, Tableau

### Experience

#### Observian Data Consulting — Salt Lake City, UT

May 2020 – Sep 2025

- Architected and deployed scalable, cloud-native data platforms for clients in logistics, healthcare, and finance, enabling unified analytics and rapid reporting access.
- Led the creation of automated ETL/ELT pipelines using Python, Airflow, and AWS Glue, reducing data latency by 45% and accelerating time-to-insight.
- Designed and implemented data validation, transformation, and quality workflows to ensure trusted analytics data across multiple client systems.
- Established CI/CD practices and infrastructure-as-code deployments (Terraform), cutting deployment times by ~50% and improving release reliability.
- Collaborated with clients to translate business requirements into data engineering roadmaps, integrating analytics into core business applications to improve decision-making.
- Guided design sessions, workshops, and training for internal teams and clients; mentored junior data engineers and promoted best practices.
- Served as the go-to resource for problem resolution, delivering repeatable data engineering patterns, comprehensive diagrams, and thorough documentation.
- Designed dimensional models (star schemas) for analytics reporting, improving query performance and simplifying end-user analytics.
-

Strengthened data security and governance with role-based access controls, data masking, and lineage tracking to support regulatory and operational requirements.

- Achieved measurable outcomes in analytics adoption, data reliability, and platform scalability across multiple industries.

DVO Consulting — Bountiful, UT

Mar 2016 – Apr 2020

- Built high-volume data ingestion pipelines processing millions of sensor events daily, enabling real-time analytics for production systems.
- Migrated the Enterprise Data Warehouse to AWS Redshift, delivering a 60% improvement in query performance and faster insights for production teams.
- Developed predictive maintenance analytics and efficiency dashboards, reducing unplanned downtime by 35% and driving operational improvements.
- Created Power BI dashboards and KPI tracking tools to monitor production performance, delivering real-time metrics to stakeholders.
- Partnered with cross-functional teams to translate data insights into actionable operations enhancements and process optimizations.

SPI Automation — North Salt Lake, UT

Jul 2012 – Aug 2014

- Built and maintained data pipelines supporting industrial automation, ensuring reliable ingestion of sensor data into operational systems.
- Implemented anomaly detection and energy optimization features, contributing to an 18% reduction in energy consumption.
- Supported real-time analytics deployment for manufacturing lines, enabling continuous process monitoring and optimization.

Data Engineering Intern — SPI Automation — North Salt Lake, UT

May 2011 – Jun 2012

- Assisted in ETL script development and SQL queries for sensor data integration, ensuring data accuracy.
- Contributed to monitoring dashboards for system performance, providing real-time insights to engineers.
- Gained foundational experience in data pipelines, integration, and automation in manufacturing settings.

---

## EDUCATION

Southern Utah University — Salt Lake City, UT

Master of Science in Data Science | 2014 – 2016

- Focus: large-scale data processing, distributed systems, applied statistics
- Capstone: real-time data pipeline optimization using Spark and AWS
- Relevant coursework: Big Data Systems, Cloud Computing, Database Design, Statistical Modeling, Data Visualization

Bachelor of Science in Computer Science | 2008 – 2012

- Emphasis on software engineering, algorithms, and database management
- Undergraduate research focused on data integration for automation systems
- Graduated with Honors; ACM member

Selected Accomplishments

- Delivered enterprise data platforms that improved data accessibility and analytics across multiple sectors.
  - Built data pipelines reducing latency and boosting reporting efficiency by substantial margins.
  - Automated data processing tasks, cutting manual effort and accelerating insight delivery.
  - Established best practices for CI/CD and IaC, increasing deployment speed and reducing errors.
  - Reduced cloud infrastructure costs through orchestration and containerization optimizations.
  - Recognized with Observian Engineering Excellence Award (2023) for leadership in data infrastructure development.
-
