

Michael Price

McDonough, GA | (470) 635-7986 | michaelprice0525@gmail.com | <https://www.linkedin.com/in/michael-price-34bb7a3b7>

SUMMARY

Senior Data Engineer with 7+ years of hands-on experience architecting and implementing scalable data solutions within Microsoft Azure ecosystem. Proven expertise in designing enterprise data pipelines using Azure Data Factory, Synapse Analytics, and Databricks while delivering complex dimensional models and star schemas for analytics. Strong track record in API integrations, JSON transformation, and metadata-driven orchestration with demonstrated ability to lead client engagements and mentor engineering teams.

EDUCATION

University of Texas at Austin — B.S., Computer Science | Sep 2013 - May 2017

- GPA: 3.98 (Top 2%)
- Coursework: Data Structures & Algorithms, Databases, Software Engineering, Distributed Systems, Cloud Computing, Big Data Systems

SKILLS

- Microsoft Azure Stack: Azure Data Factory, Azure Synapse Analytics, Azure Databricks, Azure SQL Database, Azure Data Lake Storage, Microsoft Fabric, Synapse Pipelines
- Data Engineering Processing: ETL/ELT pipelines, Apache Spark, PySpark, metadata-driven orchestration, data integration, API ingestion, OAuth 2, JSON transformation
- Database Modeling: SQL Server, Azure SQL Database, advanced SQL, dimensional modeling, star schema, fact tables, dimension tables, complex joins
- Programming Scripting: Python, SQL, T-SQL, PowerShell, PySpark, stored procedures, Azure Resource Manager templates, REST APIs
- Data Architecture Governance: data lake architecture, data warehouse design, data security, RBAC, data validation, pipeline monitoring, data lineage, enterprise architecture
- Development Collaboration: Azure DevOps, Git, CI/CD pipelines, documentation, technical mentoring, client engagement, project management, workshop facilitation

CERTIFICATIONS

- AWS Certified Data Engineer – Associate
- AWS Certified Solutions Architect – Associate
- SnowPro Core Certification
- Databricks Certified Data Engineer Associate

EXPERIENCE

Cognizant

Mar 2023 - Present

Senior Data Engineer

Teaneck, NJ

- Architected enterprise-scale data engineering solutions using Azure Data Factory, Synapse Analytics, and Databricks to process 10TB+ daily volumes for transaction monitoring and risk analytics
- Designed and implemented complex dimensional models with star schemas using SQL Server and Azure SQL Database, enabling trusted downstream BI reporting and analytics

- Built metadata-driven orchestration pipelines integrating API sources with OAuth 2 authentication, standardizing JSON structures into SQL-compatible formats for enterprise consumption
- Developed Azure Data Lake Storage solutions combining data lake and warehouse architectures, improving data accessibility and reducing processing costs by 40%
- Led cross-functional collaboration with BI developers, Azure administrators, and business analysts to deliver comprehensive data solutions aligned with client objectives
- Implemented robust data quality frameworks with automated validation, monitoring, and alerting using Azure native services, achieving 99.5% pipeline reliability
- Mentored junior data engineers while establishing best practices for Azure-based data architecture, documentation standards, and deployment automation
- Partnered directly with business stakeholders to translate requirements into scalable Microsoft data platform solutions, driving measurable improvements in analytics delivery
- Optimized Azure Synapse workloads through advanced SQL tuning, partitioning strategies, and incremental loading patterns, reducing query execution time by 60%

Teradata

Sep 2020 – Feb 2023

Senior Software Engineer

San Diego, CA

- Designed enterprise data strategies using Azure Data Factory and Synapse Analytics for large-scale analytics migrations and real-time data integration initiatives
- Built cloud-native data orchestration workflows leveraging Azure services including ADLS, Data Factory, and SQL Database for governed dataset processing and analytics enablement
- Developed modular transformation layers using Azure data services and SQL-based frameworks, improving code reusability and accelerating downstream data delivery timelines
- Implemented Azure-based scheduling, dependency management, and recovery patterns significantly improving pipeline observability and SLA adherence across production environments
- Established Azure DevOps CI/CD practices for data engineering workflows, enabling automated deployment and higher release quality across development and production
- Enhanced data platform trust through comprehensive validation, anomaly detection, and pipeline testing aligned with modern Azure data governance standards
- Delivered secure, enterprise-grade Azure data solutions with RBAC, encryption, and access controls meeting compliance requirements for sensitive datasets
- Collaborated with platform engineers and business teams to define data contracts and deliver high-quality assets using Azure Synapse and SQL Database

Chevron

Oct 2017 – Aug 2020

Software Engineer

Houston, TX

- Developed data-centric enterprise solutions using SQL Server, Azure SQL Database, and Microsoft Power Platform for business process automation and reporting
- Built comprehensive ETL pipelines and validation frameworks using SQL Server Integration Services, improving data accuracy by 90% through automation and optimization
- Created structured reporting datasets and transformation logic supporting operational dashboards and KPI standardization using Microsoft BI stack
- Implemented near-real-time data flows using SQL Server and Azure services, accelerating operational decision-making and

improving business visibility

- Integrated Microsoft 365 and Power Platform solutions with backend data services, significantly reducing manual processes and improving workflow efficiency
- Collaborated with business analysts and stakeholders to gather requirements and deliver Microsoft-based data solutions aligned with operational goals
- Enhanced application reliability through improved logging, validation, and support processes for SQL Server-based data services and reporting tools
